

# Creating an Energy Efficient Home

What to Expect and Ask When Making Improvements

Time to shine.

# What is a Home Energy Audit?

- Comprehensive inspection and analysis of your home to assess:
  - Structural issues that contribute to energy loss
  - Equipment issues that contribute to excessive energy use
  - Behavioral issues that contribute to energy loss
  - Health and Safety Concerns
  - Comfort Concerns

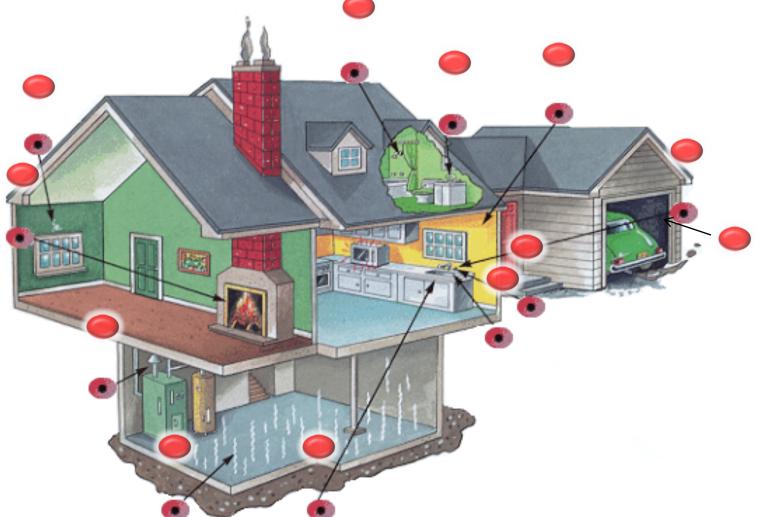

# Comfort, Safety, and Efficiency

### A comfortable, safe, and energy-efficient home requires:

- A fully insulated thermal envelope.
- A well-sealed air boundary.
- The thermal and air boundaries to be continuous and in contact with one another.
- Efficient, properly sized equipment to condition the living space and heat water.
- A well-designed and balanced air distribution system.
- Healthy indoor air quality.

# House as a System

# House as a System

### A house is a system of interdependent parts.

- The operation of one part affects many others.
- When they all work together, the house is comfortable, safe, efficient, and durable.

# A house will experience problems when its house parts don't work together properly.

- Some obvious, some invisible.
- Some now, some years down the road.

Leaky recessed lighting fixtures...

Increases heat loss/gain, and can cause ice dams.

This bathroom exhaust fan does not exhaust to outdoors – just to the soffit. The moisture condenses on the roof deck and trusses causing damage.

# **Blower Door**

### **Combustion Analyzer**

#### Combustible Gas Detector

#### **Inspection Mirror**

**Smoke Tester (for Oil)** 

### **Digital Probe Thermometer**

### **Exterior Walk-Around**

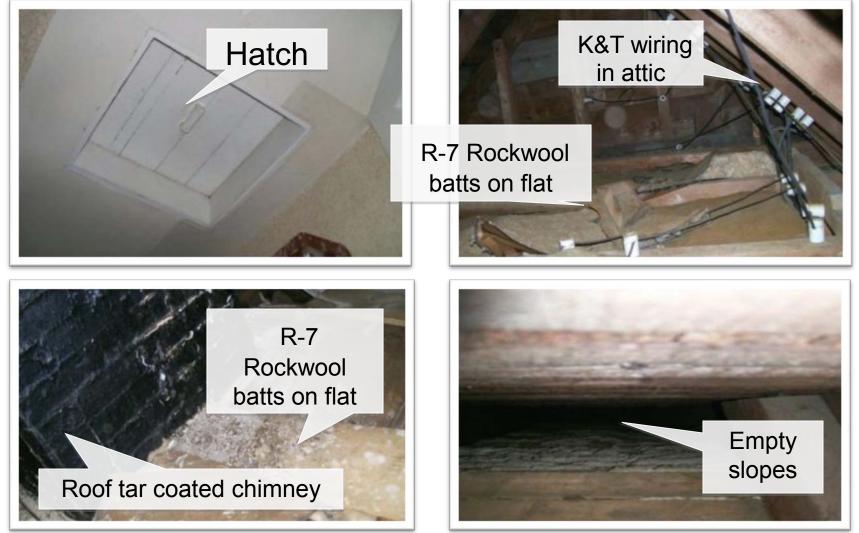

#### **Excessive window condensation**

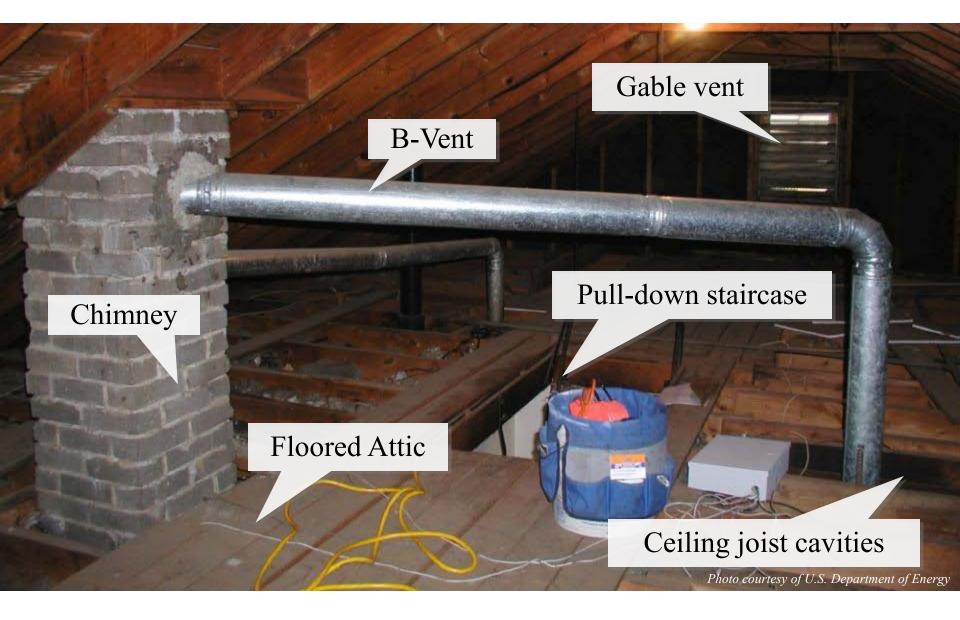

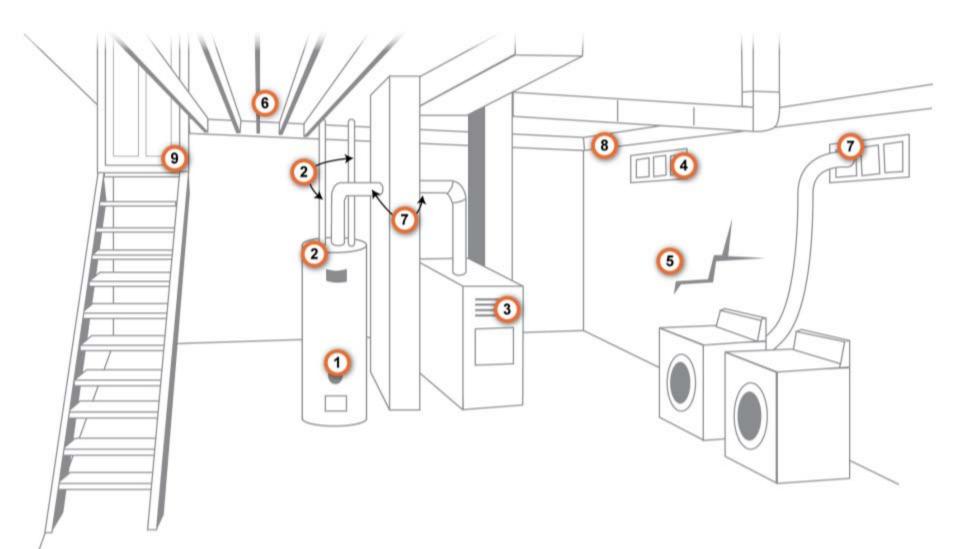

### Interior Walk-Through - Attic

# **Thermal Boundary**

### **The Thermal Boundary:**

- Limits heat flow between inside and outside.
- Easy to identify by presence of insulation.
- The location of insulation in relation to other building components is critical to its effectiveness.
- Even small areas of missing insulation are very important.
- Voids of 7% can reduce effective R-value by almost 50%.

Thermal Boundary

Air

Barrier

# Air Barrier

### **The Air Barrier:**

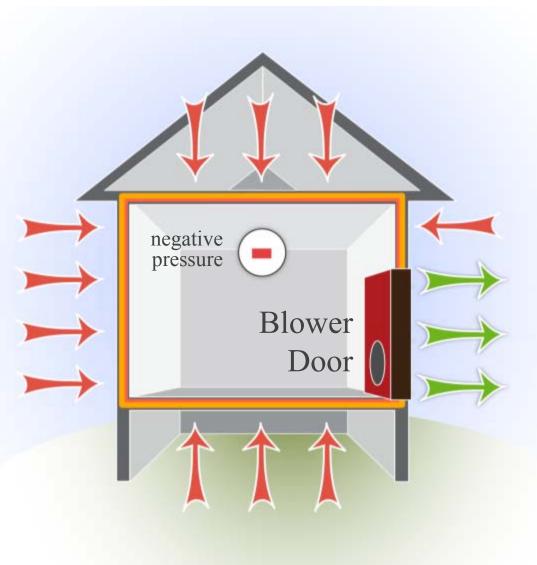

- Limits airflow between inside and outside.
- More difficult to identify.
- Not always where you think it is.
- Blower door is used to locate air barrier.

### Use a Blower Door as a Controlled Driving Force

Using the blower door depressurizes the house drawing air through all the holes between inside and outside.

### **General Air Leakage**

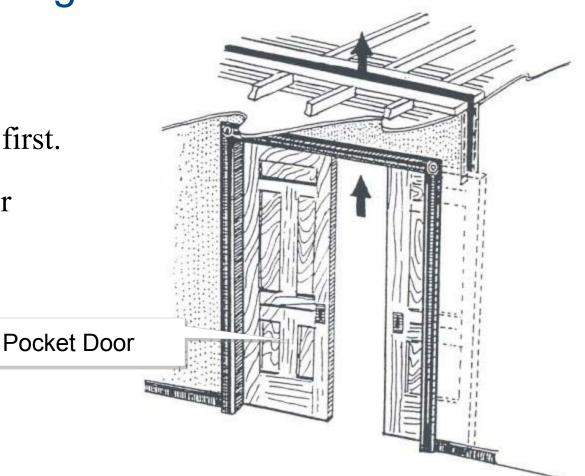

Major attic bypasses like these should be documented.

More materials will be needed than for typical air sealing.

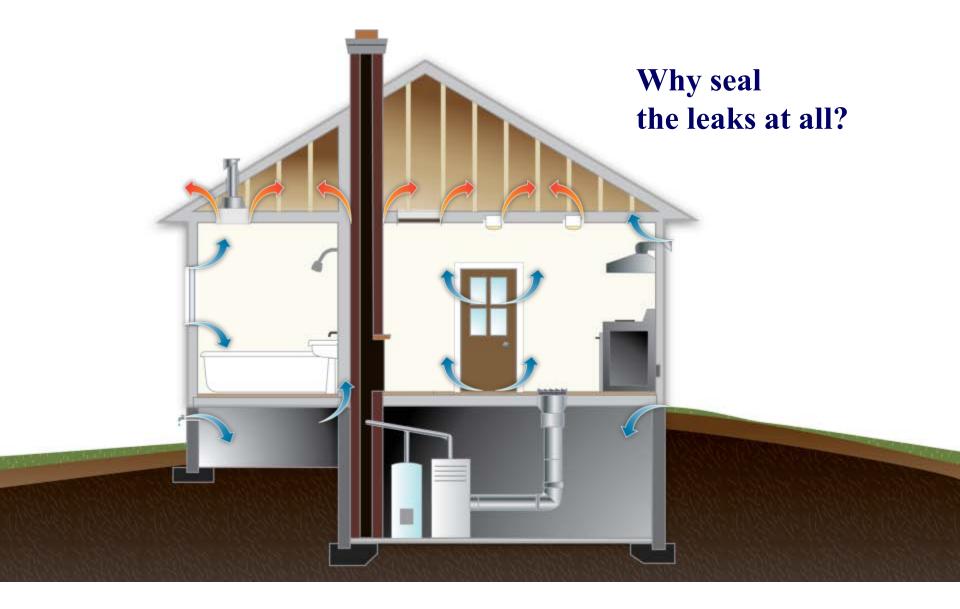

## Interior Air Leakage Sites Specify cost-effective air sealing by:

- Addressing large leaks first.
- Not focusing on smaller inconsequential leaks.

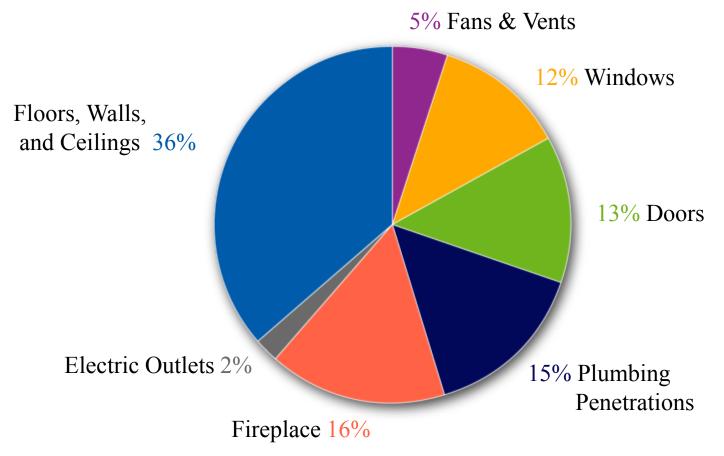

Graphic source: PA WTC

# **Primary Air Infiltration Sites**

Moisture

Moisture flows with warm air through breaks in the air barrier, causing damage when it condenses on cool surfaces.

Air Barrier

**Thermal Barrier** 

### Frost on underside of roof sheathing

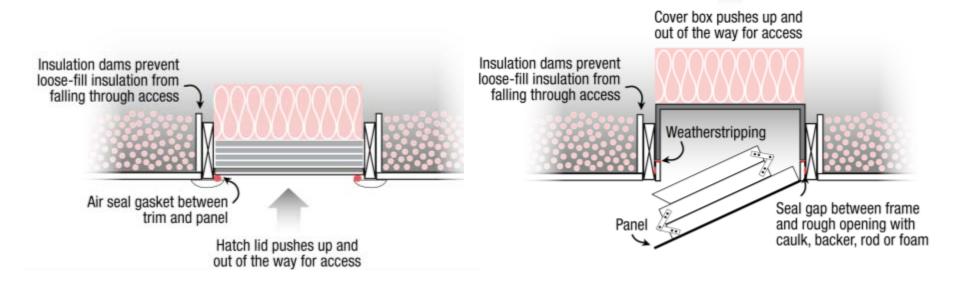

### **Mold on interior surfaces**

#### Scuttle Hole Cover

#### Pull-Down Attic Stairs

Graphics courtesy of http://www.energysavers.gov/your\_home/insulation\_airsealing/index.cfm/mytopic=11400

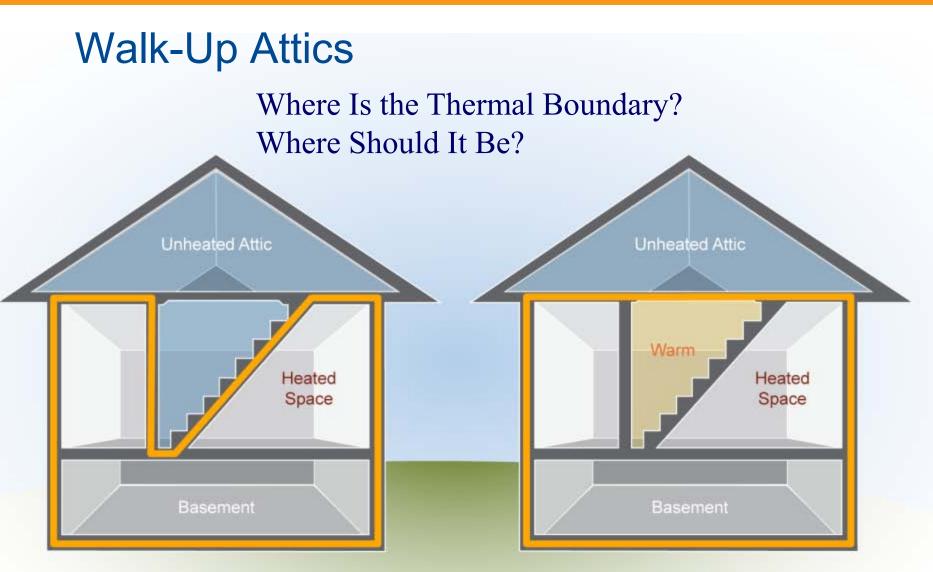

- Also known as "Can Lights"
- Often leak air to attic

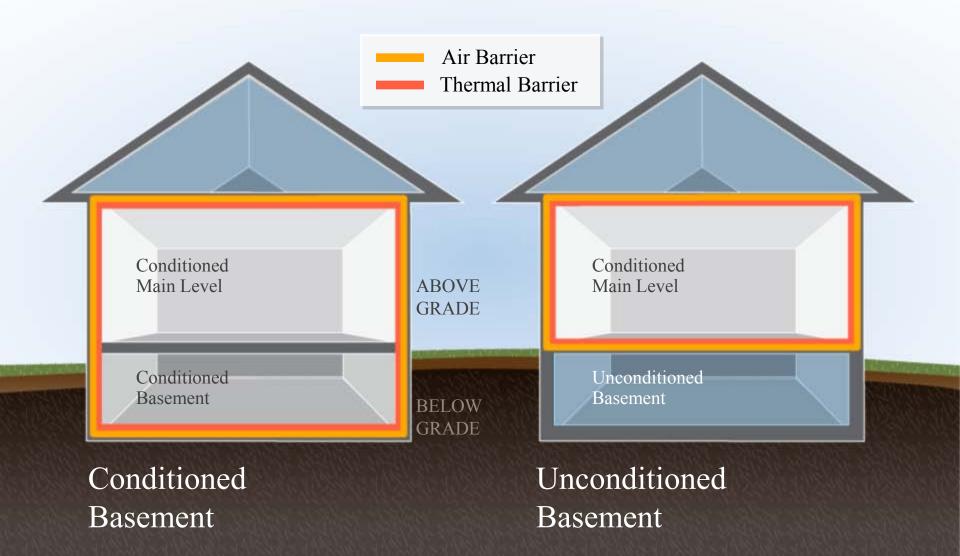

**Too Much Insulation** 

Contractor Invoice

## It's a Fine Line.....

### **Not Enough Insulation**

## **Cost-Effective Insulation Levels**

### **Duct Leakage**

Duct leakage can create positive and negative pressures in different areas of the house.

The pressures associated with duct leaks can be larger and more important because the driving force is stronger.

#### U.S. DEPARTMENT OF ENERGY SOLAR DECATHIONTE Summary

Time to shine.

## **Duct Specifications**

- Specify duct sealing where ducts are located in unconditioned spaces.
- Ducts in unconditioned spaces should be insulated to recommended levels.
- Seal all returns in spaces where atmospheric fossil fuel appliances are located.

It is often necessary to remove duct insulation to properly seal ducts. Seal with mastic, then re-insulate.

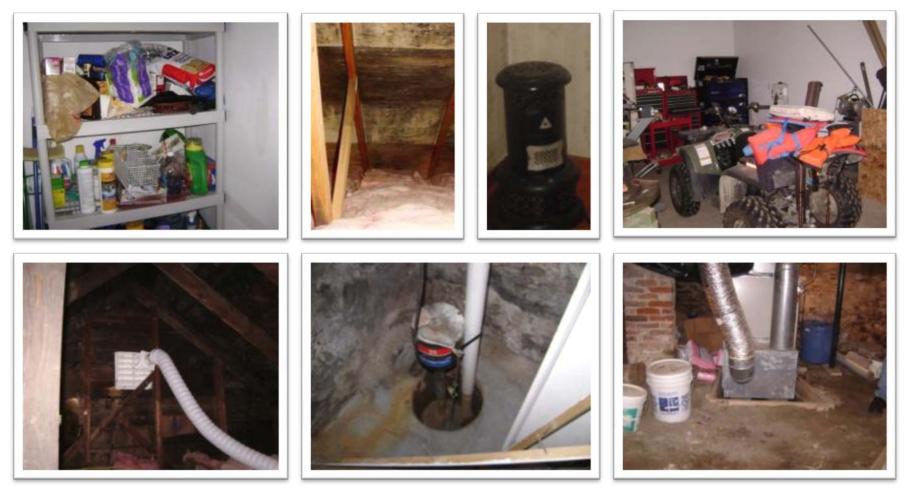

### Indoor Air Quality

Time to shine.

#### What Determines IAQ?

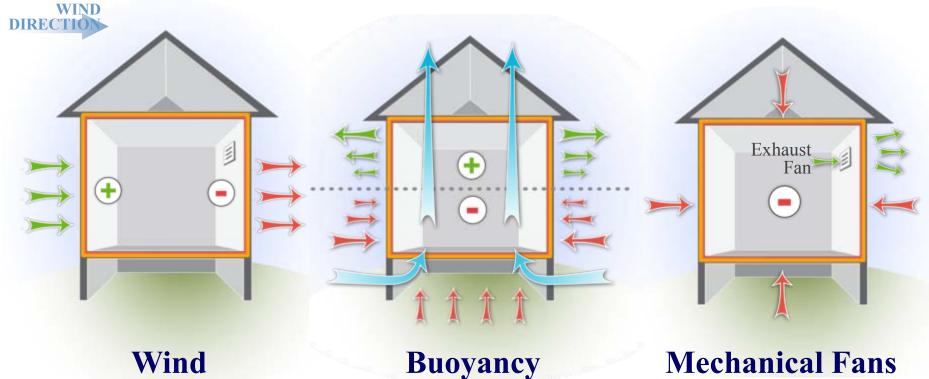

Photos courtesy of The US Department of Energy

Time to shine.

### **Outside Air and IAQ**

#### How much outside air do we need for good IAQ? How do we get it?

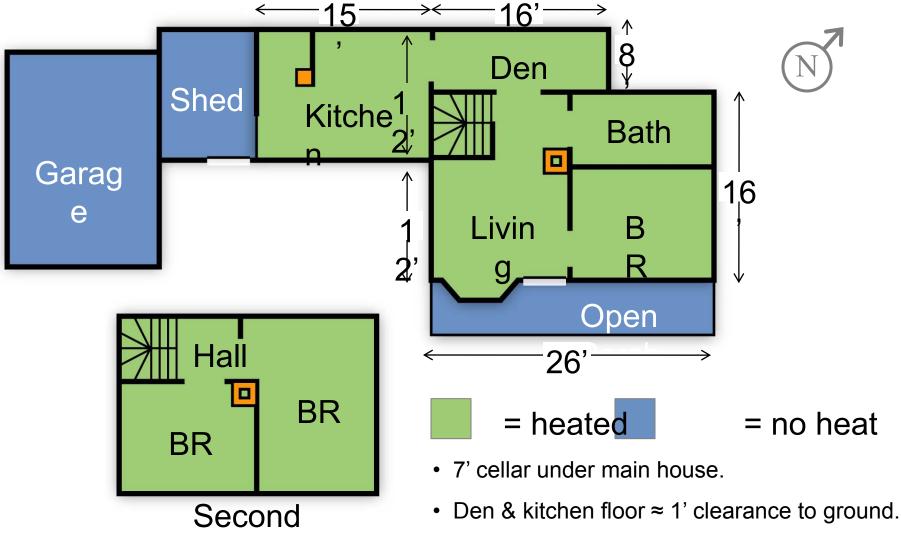

Stack effect - warm air rising

Floor

### **ASRAE 62.2**

## **Combustion Appliance Test Kit**

- Smoke pump and filter paper.
- Lighter.
- Combustion analyzer and manual.
- High-temp sealant.
- Appropriate drill bits for test holes.

# Why Test Combustion Appliances?

### We test to assure:

- Health and safety.
- Building integrity.
- Comfort.
- Energy efficiency.

### What do we test on combustion appliances?

- Fuel leaks.
- Fuel input rate.
- Sufficient combustion air.
- Worst case draft.
- Carbon monoxide.
- Combustion efficiency.

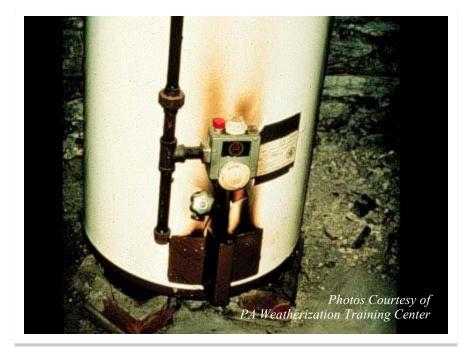

#### Using a calibrated gas leak detector to locate fuel leaks.

Bacharach www.bacharach-inc.com

Burn marks above the burner compartment are evidence of flame roll out. Spillage of flue gases or insufficient draft is often a result of an improper installation such as this.

- Understanding the basic principles of combustion, distribution, and venting will enable the auditor to recognize safety problems.
- Health and safety issues related to combustion equipment are some of the most important aspects of auditing a home.
- Visual and diagnostic combustion appliance safety and efficiency inspections, and worst case CAZ testing reveal potentially dangerous situations and guide retrofit strategies.
- Understanding the relationship between combustion safety problems and poorly designed or non-compliant vent systems is important to finding solutions.

# **Base Load Defined**

### Base Load:

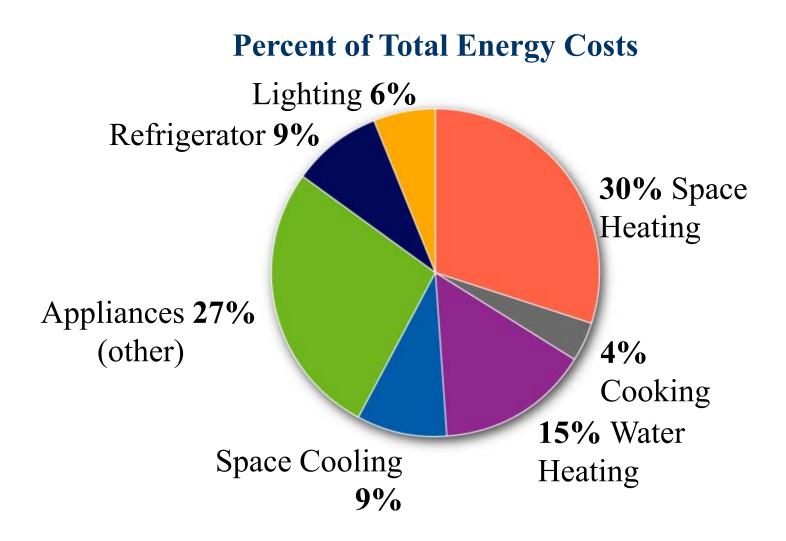

The energy used by electric or gas appliances in a home that is not used for space conditioning, thus not a seasonal load.

### **Typical Measures include:**

- Lighting Retrofits.
- Refrigerator Replacement.
- Water Heater Modification.
- Low-flow Fixtures.

### Why Target Electric Base Loads?

Time to shine.

Time to shine.

### **Consumption Analysis**

**Bill Analysis** 

2. Site Survey

3. Reconcile the Two

# Lighting

- Lighting accounts for up to **10%** of total home energy use.
- With Compact Fluorescent Lighting (CFL) retrofits, can cut that by **75%**.
- Overall energy reduction of 7.5% for the home.

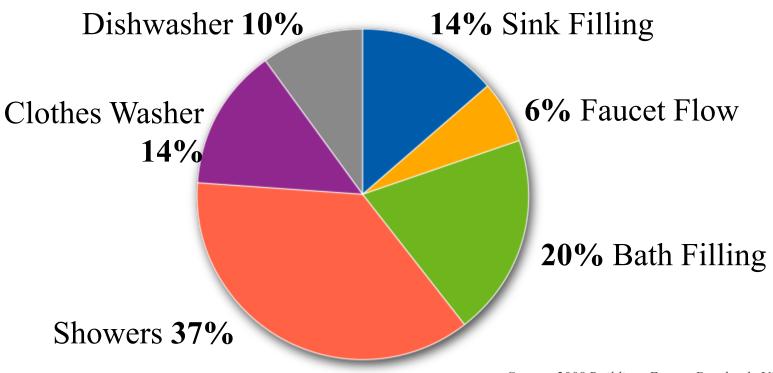

#### Hot Water

### Hot Water Use

# Summary

- A successful weatherization project begins with a systematic approach of visual and diagnostic evaluation.
- Good building assessments begin with a thorough client interview.
- A successful audit relies on the application of accurate visual assessment and diagnostic procedures.
- A successful building assessment incorporates all of the knowledge of building systems and the interaction of their components.
- Auditors must document moisture, electrical, and health and safety problems.
- Understanding the components of the thermal boundary will help the auditor determine the most cost effective retrofit strategies.

## The Fundamental Audit Protocol

- Exterior Inspection
- Interior Inspection
- Blower Door Test
- Duct Leakage Test
- Combustion Appliance Test
- Utility Bill Analysis and Baseload Analysis
- IAQ inspection

## Worth Some Thought

- Thermal Imaging
- Certifications
- The great window debate
- Should your auditor also be your contractor?
- Blower Door directed airsealing
