GENERAL STRUCTURAL NOTES

JVA Job # Solar Decathlon 2007

DESIGN LIVE LOADS: 2006 IBC, U.O.N.

*	Snow	20 psf
*	Wind	60 mph, exp C, 3 second gust, DC 130 mph, exp C, # second gust, CO
*	Floor	50 psf
*	Exterior Decks	50 psf

FOUNDATION:

* Foundation design is in accordance with recommendations contained in soils investigation "Colar Decathlon Building Code" dated May 3, 2006 .
* The report is hereby referenced and except where otherwise specifically noted herein, all recommendations and precautions contained in that report shall be adhered to by the contractor.
* Footings shall be placed on undisturbed natural soil or compacted fill tested and approved by soils engineer.
  * Maximum design soil pressure: 1500 psf

STRUCTURAL STEEL:

*	Structural Beams.:	ASTM A992
*	Angles, misc:	ASTM A36
*	Anchor Bolts:	ASTM A307 or A36.
*	Standard pipe columns:	ASTM A 53, Grade B.
*	Tube Columns:	ASTM A500, Grade B, 46 ksi
*	Connector bolts:	ASTM A325

* All structural steel shall be fabricated and erected per the current edition of AISC Steel Construction Manual.
* Welding by qualified welders. E70XX electrodes. 3/16" fillet welds, unless noted otherwise.
* Except as noted, framed beam connections shall be detailed to develop 0.6 x Allowable Uniform Load values tabulated in the 9th Edition AISC Manual, Pp. 2-27 and following.
* All beams shall have full depth web stiffeners each side of webs above and below columns. (¼" or as noted)
* Attach wood nailer plates to beams with 1/2" diameter machine or carriage bolts at maximum 32" o.c., or 3/8" diameter bolts at 32" with glued contact face, or 5/32" diameter powder actuated drive pins at 24" o.c., U.O.N.

WOOD FRAMING:

* Dimension Lumber is designed and shall be supplied using BASE VALUES Design Criteria.
* Hem-Fir #2 and better (Maximum Moisture Content 19%) U.O.N.
  Plates: Sill plates: Preservative treated Hem Fir or Southern Pine.
* "Pressure treated lumber" shall be framing material of the specified species which has been pressure treated with a decay and insect resistant solution, meeting all current standards for wood in contact with concrete or earth. Sill plates in contact with masonry or concrete foundations, footings or slabs may be treated Timber Strand LSL (zinc borate treatment). Acceptable treatment mediums for wood in contact with earth or in exterior applications include ACQ (Alkaline Copper Quaternary) and copper azole. All connectors shall meet the recommendations of the pressure treated wood manufacturer, but shall be not less than Hot Dipped Galvanized or Stainless Steel. All screws, nails and bolts shall match hangers and other connectors. Do not mix stainless with galvanized products.
  Do not allow aluminum to contact treated wood.
  Top and Bottom Plates: Hem Fir
  Hem Fir Studs U.O.N: 2 x 4 and 2 x 6 to 8'-0: stud grade
  2x4 over 8'-0 standard and better
  2x6 over 8'-0 No. 2 and better
* Beams: Douglas Fir No. 1, Fb=1350 psi, E=1,600,000 psi
* Columns: Douglas Fir No. 1, Fb=1200 psi, E=1,600,000 psi
* Laminated Veneer Lumber (LVL): Manufactured 1 3/4" wide Microllams (ML) by Trus Joist or equivalent.
  Fb=2,600 psi, E=1,900,000 psi, Fv=285 psi, depth noted on plans.
* LSL Rim Joists: Manufactured 1-1/4" x depth indicated laminated strand lumber by Trus Joist. No substitutions.
* Glued, laminated framing members per ANSI Standard A190.1-92. Mark members with an AITC Quality Stamp and furnish an AITC Certificate of Conformance. Doug Fir, Fb = 2400 psi, E = 1,800,000
  Simple span: Combination Symbol: 24FV4, <<<ZERO 2400 FT SEE PLANS for >>> camber.
  Multiple span, continuous beam, and cantilevered beams. Combination Symbol: 24FV8, zero camber.

* Minimum nailing shall comply with UBC Table 23-ll-B-1 or IBC Table 2304.9.1 except where more or larger nailing shown on drawings.
* Metal connectors: Simpson Strong Tie unless otherwise noted, installed with number and type of nails to achieve maximum rated capacity. Note that heavy duty and skewed hangers may require special order.
* All beams shall be braced against rotation at points of bearing.
* Drypack grout all beam pockets full after beams are set.
* Lead holes for lag screws shall be 60% to 70% of lag shank diameter in compliance with AITC criteria.

STRUCTURAL INSULATED PANEL FRAMING:

*Except as noted otherwise, minimum nailing shall be provided as specified in IBC Table 2304.9.1 "Fastening Schedule."
*Roof to Wall connection
Fasteners shall have minimum of 1-1/2" penetration into support member. Secure roof panel to wall top spline with both screw fasteners 2" thicker than panel spaced 12" o.c. and two strips of construction adhesive.
*Roof to Beams or top wall plates
Fasteners for 4-1/2" roof panels shall be 6" panel screw at 8" o.c.
Fasteners for 6-1/2" roof panels shall be 8" panel screw at 8" o.c.
*Roof Panels to Ridge beam
Fasteners for 4-1/2" roof panels shall be 6" panel screw at 12" o.c.
Fasteners for 6-1/2" roof panels shall be 8" panel screw at 12" o.c.
*Wall to Floor connections
Use 16d nails space 6' o.c. in two staggered rows to secure bottom spline to floor sill.
*Wall panel Assembly: Lock panels together using manufacturer specified locking system.
*Plywood and oriented strand board (OSB) floor and roof sheathing shall be APA graded with panel identification index, thickness, and nailing as noted on the drawings.
*End stud at each doorjamb, at all exterior corners, and at ends of OSB sheathed wall sections shall have one H4 anchor to the sole plate.

STRUCTURAL ERECTION AND BRACING REQUIREMENTS

* The structural drawings illustrate the completed structure with all elements in their final positions, properly supported and braced. The contractor, in the proper sequence, shall provide proper shoring and bracing as may be required to achieve the final completed structure.
* These plans have been engineered for construction at one specific building site. Builder assumes ALL responsibility for use of these plans at Any Other building site. Plans shall not be used for construction at any other building site without specific review by the engineer.

FRAMING NOTES:

* ① = number of studs in built-up stud columns below, nail all laminations with 16d at 12" o.c. full height.
* T = Header Trimmer
  K = King Stud
  One trimmer and one king stud each side of openings in stud walls U.O.N.
* Header sizes shown are minimum. Headers may be standardized at largest size at contractors option. (If not indicated, min. Header is 3 - 2X8 for 2x6 stud walls, or 2-2x8 for 2x4 stud walls)

SHOP DRAWINGS

Fabricator and / or supplier of structural steel, structurally insulated panels, and shipping container modifications shall submit shop and erection drawings for architect and engineer review. Submit one reproducible and two prints for each drawing. Allow five working days for review.

M1.01

(#) SPECIFIC NOTES:

1. PROVIDE JET DIFFUSER INSTALLATION FOR FUTURE USE. CLOSE OFF DAMPER FOR COMPETITION. COORDINATE DIFFUSER LOCATION WITH ARCHITECTURAL CEILING.
2. COORDINATE DIFFUSER LOCATION WITH ARCHITECTURAL CEILING.
3. PROVIDE SUPPLY FAN INSTALLATION IN LOCATION ABOVE REFRIGERATOR.
4. SUPPLY FAN RETURN AIR DUCT OPEN TO CEILING PLENUM. COVER DUCT OPENING WITH SIZE GALVANIZED WIRE MESH.
5. PROVIDE CUSTOM FAN COIL INSTALLATION IN LOCATION INDICATED. MOUNT FAN COIL WITHIN CEILING PLENUM. SEE DRAWING M6.05.
6. BATHROOM EXHAUST FAN RETURN AIR DUCT OPEN TO CEILING PLENUM. COVER DUCT OPENING WITH SIZE GALVANIZED WIRE MESH.
7. PROVIDE EXHAUST FAN INSTALLATION IN ARCHITECTURAL SOFFIT. CONNECT EXHAUST AIR DISCHARGE TO EXISTING SHIPPING CONTAINER VENT IN NORTHWEST LOCATION. CONNECT EXHAUST AIR INTAKE TO EXHAUST AIR PLENUM. COORDINATE PLENUM WITH ARCHITECTURAL DIFFUSER.

1 HVAC DUCTWORK ONE-LINE DIAGRAM
N.T.S.

NOTES:
1. BATHROOM EXHAUST FAN, EF-1, SHALL OPERATE INTERMITTENTLY BY MEANS OF SWITCH WITH TIMER DURING THE COOLING PERIOD. DURING THE HEATING PERIOD EF-1 SHALL OPERATE CONTINUOUSLY IN ORDER TO MAINTAIN BALANCED VENTILATION FLOW.
2. ELECTRICAL EQUIPMENT EXHAUST, EF-2, SHALL OPERATE CONTINOUSLY DURING THE COOLING PERIOD IN REMOVE EXCESS HEAT GENERATED BY ELECTRICAL EQUIPMENT FROM THE BUILDING AND PROVIDE BALANCED VENTILATION. DURING TEH HEATING PERIOD EF-2 SHALL NOT OPERATE.
3. SF-1 SHALL OPERATE UPON CALL FOR ZONE HEATING OR COOLING.
4. VENTILATION FAN, VF-1 SHALL OPERATE CONTINUOUSLY TO PROVIDE ADEQUATE VENTILATION AIR.

M7.21

GENERAL MECHANICAL NOTES:
1. THE PROJECT CONSISTS OF TWO PHASES. THE FIRST PHASE CONSISTS OF THE CONSTRUCTION OF A SMALLER MODULE THAT WILL BE USED DURING THE SOLAR DECATHLON COMPETITION IN WASHINGTON D.C. THE SECOND PHASE CONSISTS OF AN ADDITION TO THE NORTH AND WEST OF THE COMPETITION MODULE. THE COMPLETE HOUSE HVAC WILL BE SUPPORTED FROM THE COMPETITION MODULE HVAC SYSTEMS.

GENERAL MECHANICAL DUCTWORK NOTES:
1. ALL DUCTWORK SHALL BE INSTALLED PER ACCA MANUAL D – RESIDENTIAL DUCT SYSTEMS AND CEE RESIDENTIAL HVAC INSTALLATION SPECIFICATION: SUPPLEMENTARY DOCUMENT, DUCT INSTALLATION AND SEALING SPECIFICATION (HTTP://WWW.CEE1.ORG/RESID/RS-AC/HVAC.PHP3).
2. DUCT INSULATION IS ONLY REQUIRED ON VENTILATION AIR DUCTWORK AND DUCTWORK ON THE SUPPLY-SIDE OF FAN COIL UNITS.
3. FLEX DUCT MAY BE USED, WITH A MAXIMUM FLEX DUCT LENGTH OF 5 FT.
4. SEE SPECIFICATIONS FOR ACCEPTABLE DUCTWORK SPECIALTIES. EQUIPMENT MAY BE SUBSTITUTED WITH AN EQUIVALENT MANUFACTURER.

GENERAL MECHANICAL PIPING NOTES:
1. ALL HYDRONIC PIPING SHALL BE TYPE L COPPER WITH WROUGHT FITTINGS.
2. PIPING SHALL BE INSULATED WITH INSULATION PER ASHRAE 90.2-2004 AND 2003 INTERNATIONAL ENERGY CONSERVATION CODE, WHICHEVER IS MORE STRINGENT. ALL INSULATION SHALL BE CLOSED CELL FOAM PER SPECIFICATIONS.
3. ALL HYDRONIC FLUID SHALL BE 40% FOOD GRADE PROPYLENE GLYCOL FLUID. FILLS POINT FOR SYSTEM IS AT HOT AND COLD TANK. PROPYLENE GLYCOL IS NOT TO BE USED AS A HEAT TRANSFER FLUID IN THE DHW HEAT PUMP LOOP. THE DHW HEAT PUMP LOOP SHALL USE WATER AS A HEAT TRANSFER FLUID.
4. PROPYLENE GLYCOL IS NOT TO BE USED DURING THE COMPETITION. WATER ONLY WILL BE USED AS A HEAT TRANSFER FLUID DURING THE COMPETITION.
5. SEE SPECIFICATIONS FOR ACCEPTABLE PIPE SPECIALTIES. EQUIPMENT MAY BE SUBSTITUTED WITH AN EQUIVALENT MANUFACTURER.

Inverter Information

# of units:	3
make:	SunPower
model:	SPR-3300x
rated wattage:	3300
V input range (DC):	195-600
V output (AC):	240
Max Continuous output Current:	13.8A
# Phases:	single
frequency:	60 Hz
UL Listing:	1741- 01

1 PV CALCULATIONS

1) Conductors from PV panels to Jbox
10 Current carrying conductors
#10 USE-2 cable from panels- manufacturer provided
NEC 310.17 #10 USE-2 in free air = 55A
temp de-rating for 71-80 C = 55A x .41 = **22.55A**

2) Conductors from Jbox to Inverter
10 Current carrying conductors
NEC 310.16 #10 THWN-2 in conduit ampacity = 40A
NEC 310.10 FPN #2 temp de-rating for 61 - 70 C = 40A x .58 = 23.2A
NEC 310.15 Conduit fill derate 23.2 x .8 = **18.56A**
Internal DC disconnect rated for 20A

3) Inverter (AC wiring) to Breaker Panel - maximum continuous output current = 13.8A
Overcurrent protection required for inverter output: 13.8 x 1.25 = **17.25A**
Use 20A Overcurrent protection and wire
6 current carrying conductors (2 per inverter)
NEC 310.16 #10 THHN in conduit ampacity = 40A
No temp de-rating, assume 30 C
NEC 240.(D) Max ampacity for #10 THHN = 30A
NEC 310.15(B)(2) Wireway de-rating: 40A x .7 = **28A**

All Equipment grounding conductors for PV's - #10 AWG

4 BATTERY CABLE SIZING CALCULATIONS

PV NEC

NEC 690.7
Lowest Ambient temperature in Colorado: -40
Correction Factor: 1.25

NEC 690.8
(1) Maximum current shall be the sum of the parallel module rated short circuit currents multiplied by 125%.

NEC 690.14 (C)(1)
Exception: Installations that comply with 690.31(E) shall be permitted to have the disconnecting means located remote from the point of entry of the system conductors.

NEC 690.31 (E)
Where source or output circuits are run inside the building, they shall be contained in metallic raceways from the point of penetration to the first disconnecting means.

NEC 690.47 (C)(2)
The dc and ac grounding electrode conductors shall be connected to a single electrode the separate electrode conductors shall be sized as required by 250.66 and 250.166.

1 AC AND DC ONE LINE DIAGRAM

GENERAL NOTES

PANEL LAC IS TO IS TO BE DURABLY MARKED WITH VOLTAGE AND CURRENT RATING AND THE NUMBER OF PHASES AND THE MANUFACTURERS NAME OR TRADE MARK
ALL DISCONNECTS FOR THE INDIVIDUAL EQUIPMENT AND BATTERIES ARE TO BE MARKED WITH A PERMENANT PLAQUE NEAR THE SPECIFIED EQUIPMENT

KEYNOTE SCHEDULE

1	DISCONNECT IS TO BE MARKED WITH A PERMANENT PLAQUE IN A VISIBLE LOCATION NEAR THE DISCONNECT
2	INVERTER SUPPLY POWER DISCONNECT IS TO BE MARKED WITH A PERMANENT PLAQUE IN A VISIBLE LOCATION NEAR THE DISCONNECT
3	AC AND DC DISCONNECT LOCATED IN INVERTER AS PER 690.14 (C)(1) EXCEPTION AND 690.31(E)

DISCONNECT SCHEDULE

A	20A AC/DC DISCONNECT LOCATED ON INVERTER
B	20A 2-POLE CIRCUIT BREAKER
C	200A 2-POLE MAIN BREAKER
D	200A 2-POLE MAIN BREAKER
E	20A AC GENERATOR BREAKER DISCONNECT
F	AUXILIARY 15A DC BREAKER DISCONNECT
G	BATTERY DC DISCONNECT: 4- 250A BREAKERS
H	20A GENERATOR AC BREAKER DISCONNECT
I	15A PUMP DC DISCONNECT
J	1A GROUND FAULT PROTECTION DEVICE (GFPD)

E4.01

Appliance	Amp	Voltage	VA
Range	30.00	240	7200
Wall Oven	6.25	120	1500
Dishwasher	6.96	120	1670
Washing / Dryer	5.42	120	1300
Refrigerator	0.22	120	52

Sizing of the Service-entrance Conductors Using the Standard Method

A. Design of Conductors for Phases

		NEC Section	
General Loads			
Lighting Load and Receptacles Outlets			
2,100 square feet			
11003.2 VA	2,100 *3VA= 6,300	220.42	
Small Appliance Receptacles			
3,000 VA		210.11 (C)(1)	
Laundry Receptacle			
1,500 VA		210.11 (C)(11)	
		220.82 (B)(2)	
Total General Load =	15,503 VA		Total general lighting load is the general lighting load + small appliance loads
Demand Load =	**7,376 VA**	220.42	Demand load is 100% x the first 3000 VA + 35% x the remaining VA
Fixed Appliance Load			
Dishwasher, Washing Machine			
Demand Load =	**3,353 VA**	220.53	(Sum of VA's)*0.75
Special Appliances			
Dryer	1,300 VA	220.54	
Range	5,760 VA	220.55	Range is 0.8 x Rated VA
DL =	**7,060 VA**		
Total Demand Load =	17,789 VA		Sum of the demand loads
I_{Load} =	**74.1 A**		Total demand load / 240V

Size of THW (Cu) Conductor According to Table 310.15(B)(6)
For a 200 amp Panel according to future expansion plans

4/0

Size of Main Breaker

200 A, 2P

1 CONDUCTOR SIZING CALCULATIONS

B. Design of Conductors for Neutral

General Loads

Demand Load = **7,376 VA**

Fixed Appliance Load

Demand Load = **3,353 VA**

Special Appliances — Apply a Demand Factor of 0.7 to Dryers and Ranges

Dryer	910 VA
Range	4,032 VA
DL =	**4,942 VA**

Total Demand Load = 15,671 VA
I_{Load} = **65.3 A** — Total demand load [VA] / 240 [V]

Size of THW (Cu) Conductor for Neutral
As per NEC 310.16

#2

Size of Grounding Electrode Conductor
As per NEC Table 250.66

#2

Size of Equipment Grounding Conductors
As per NEC Table 250.122

#6

2 NEUTRAL CONDUCTOR SIZING CALCULATIONS

D. Conduit Fill Calculations

Location	Insulation	Size	Area [in^2]	Quantity	Total Area	NEC Section
1) PDP to Panelboard	THW	4/0	0.3718	3	1.1154	350 Tables 4 and 5
	THW	#6	0.0726	1	0.0726	
	Total				1.188	
	Conduit	**Size**	**40% of Area**			
	LFNC-B	2"	1.298			
2) DC Wireway to Inverters	**Insulation**	**Size**	**Number of conductors**			Annex C Table C.1
	THHN	#10	5			
	Conduit	**Size**	**Maximum number of conductors**			
	EMT	1"	16			
3) Inverters to AC WireWay	**Insulation**	**Size**	**Number of conductors**			Annex C Table C.1
	THHN	#12	3			
	Conduit	**Size**	**Maximum number of conductors**			
	EMT	1"	26
