**Appendix A**: Construction Specifications

**Appendix B**: Quantity Takeoff
Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

**August 22, 2013 As-Built revision**

The Project Manual has been updated from the previous issue. Revisions includes:

**Fire Protection:**

**DWG. Changes**
- Changed sidewall sprinkler in Flex room to recessed sprinkler centered in room. – F-101

**P.M. Changes**
- -

**Plumbing:**

**DWG. Changes**
- Hot water tank was changed from 66-gallon to 80-gallon – P-602
- Studor Mini-vents were removed from the project – P-102 & P-601

**P.M. Changes**
- Studor Mini-vent cut sheets removed from P.M.

**Mechanical:**

**DWG. Changes**
- Trane air handler & condenser unit was changed to a Daikin unit – M-601
- Location of Condensate misting tank was to outside thermal envelope – M-603
- ERV was changed from Panasonic to Fantech and moved from Bathroom to Hallway – M-601
- Duct trunk in Flex room was removed & changed to side wall vent – M-101
- Fan in Flex Room was removed – M-101
- All wall transfer grilles were removed from project – M-601 & M-602

**P.M. Changes**
- Added Daikin Air Handler & Condenser Unit cut sheets
- Added Fantech ERV cut sheets

**Electrical:**

**DWG. Changes**
- Removed Outdoor grill & Car Charger circuit – E-601
- Changed Living room & Flex Room lighting from up-light in soffit tray to recessed LED hi-hats – E-103
- Updated size of solar shingle array – E-602
- Location of PV inverters was moved from West wall of Mechanical room to South wall – E-401

**P.M. Changes**
- Updated all lighting cut sheets in section 26 51 13
- Summary of Unlisted Electrical Components

**Telecom:**

**DWG. Changes**
- Updated location of smart sensor units – T-101
- Updated wiring diagrams for control modules – T-602

**Civil:**

**DWG. Changes**
- Ground contact plan was updated per new footing layout – C-101
Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

**August 22, 2013 As-Built revision**

The Project Manual has been updated from the previous issue. Revisions includes:

**Structural:**

**DWG. Changes**
- Updated footer locations for new deck and ramp design – S-101
- Framing plan was updated for new deck layout – S-105
- Framing Elevations were removed from Drawing set – S-201 & S-202

**P.M. Changes**
- Updated calculations for Dry Module 13’ Span Header
- Updated calculations for Dry Module Exterior Roof System
- Updated calculations for Dry Module NanaWall Header
- Updated calculations for Dry Module Wall System
- Updated calculations for Wet Module NanaWall Header

**Architectural:**

**DWG. Changes**
- Changed exit ramp from south side to east side at 1:21 slope – A-101
- Removed light try from Living Room ceiling – A-121
- Removed soffit condition in Flex Room – A-121
- Removed planter boxes along south façade of Wet Module – A-101
- Removed waterfall countertops from Kitchen – A-701 – A-703
- Changed laundry room doors from full swing to bi-fold doors - A-601
- Changed bathroom vanity & faucet – A-602
- Floor finish was changed to white oak hardwood floor – A-602
- Tile selections were updated for bathroom & kitchen backsplash – PM page 09-???
- Painted black steel handrails were added for all decks and ramps – A-101 & A-111
- Updated exterior millwork drawings – A-450 & 451
- Added drawings for aluminum & cedar rainscreen panels – A-???
- Updated millwork drawings to reflect as-built conditions – A-701 – A-710
- Changed soffit condition of main solar roof from aluminum panel to 1x6 T&G cedar – A-571 & 572
- Updated RCP to reflect change in lighting for all rooms – A-121
- Changed Nanawall door in master bedroom to a single inward swing Pella door – A-601
- Scupper was changed to a 6K black round – A-113
- Laundry room ceiling was changed from drywall to acoustical lay-in tiles – A-602 & A-121
- Wall paint finish & color was changed – A-602

**P.M. Changes**
- Changed laundry room doors cut sheets in section 08 71 00
- Changed bathroom vanity & faucet cut sheets in section 22 41 16
- Changed floor finish floor cut sheets in section 09 00 00
- Updated waterproofing membrane to W.R. Grace in section 07 25 00
Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

**August 22, 2013 As-Built revision**

The Project Manual has been updated from the previous issue. Revisions includes:

**Operations:**

- **DWG. Changes**
  - Truck Loading plans were updated per new site information – O-103

- **P.M. Changes**
  - 

-
Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

April 05, 2013 CD-Resubmission revision

The Project Manual has been updated from the previous issue. Revisions includes:

**Fire Protection:**
- **DWG. Changes**
  - Revised sheet F-101 so that it is compliant
- **P.M. Changes**
  - -

**Plumbing:**
- **DWG. Changes**
  - -
- **P.M. Changes**
  - -

**Mechanical:**
- **DWG. Changes**
  - -
- **P.M. Changes**
  - -

**Electrical:**
- **DWG. Changes**
  - C-103-Organizer Utility Panel was moved to a proper locations.
  - E-401-DC Disconnect Switches were added for the Inverters.
  - E-601-One Line Diagram was updated to reply to comments that were received.
  - E-602-Three Line Diagram was updated to reply to comments that were received.
  - E-603-Schedule was updated to specify MLO
- **P.M. Changes**
  - Specification 26 24 16 was updated to specify MLO

**Structural:**
- **DWG. Changes**
  - S-001: Notes & Symbols Updated
  - S-101: New Foundation Plan
  - S-102: New Floor Framing; Trus Joist
  - S-103: New Roof Framing
  - S-701: New Foundation Details
- **PM Changes**
  - Updated Structural Calculations to reflect change from SIPs to conventional framing

**Architectural:**
- **DWG. Changes**
  - -
- **PM Changes**
  - -
Summary of Changes

Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

November 26, 2012 Revision

The Project Manual has been updated from the previous issue. Revisions includes:

- See Appendix C for DOE Review Comments & Responses

Fire Protection:
- No major changes to the drawings
- Updated product cut sheets in P.M. to include sprinkler heads

Plumbing:
- Updated plumbing one-line diagrams (P-602 & P603)

Structural:
- DWG. Changes
  - Added Shear wall diagrams to S-001
  - P.M. Changes
- Added lateral forces narrative
- Revised structural calcs. from Class III to Class II

Architectural:
- DWG. Changes
  - Changed layout to laundry room & mech. room to allow for proper code clearance for elec. equipment
  - P.M. Changes
  - Added more technical info for SIPS & PCM building materials

Electrical:
- DWG. Changes
  - Inverters and competition PA enclosure move to outside Mech. room
  - All calculations were updated on E-603
  - Panel schedule on E-603 was fully updated
  - E-401 was updated to show clearance requirements
  - P.M. Changes
  - Added full inverter cut sheets
  - Removed Sunny Boy inverter cut sheet (was not used in project)
  - Added OCPD cut sheets
  - Added MCB cut sheets

Mechanical:
- DWG. Changes
  - Added sheet M-603 to clarify condensate misting system
  - Removed ceiling fan from flex room
Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

**February 14, 2013 Revision**

The Project Manual has been updated from the previous issue. Revisions includes:

**Fire Protection:**
- **DWG. Changes**
  - Revised sheet F-101
- **P.M. Changes**
  - Added Quick Response sprinkler cut sheet
  - Appended smoke/CO detector cut sheet

**Plumbing:**
- **DWG. Changes**
  - Added sheets P-201, P-202, P-203, and P-901
  - Revised sheets P-601, P-602, P-603
- **P.M. Changes**
  - Added water conditioner cut sheet

**Mechanical:**
- **DWG. Changes**
  - Added sheets M-102, M-202, and M-604
- **P.M. Changes**
  - Added air handler TAM8A0A24V21CB cut sheet
  - Added split system heat pump XL20i 4TWZ0024 cut sheet
  - Added Grainger register cut sheet
  - Removed Titus diffuser cut sheet
  - Removed Fujitsu cut sheet
  - Added equipment pad cut sheet
  - Removed solar thermal cut sheets
  - Added damper cut sheet

**Electrical:**
- **DWG. Changes**
  - Inverters and Team Organizer Panel moved back into the mechanical room
  - Load calculations updated on sheet E-603
  - Panel schedule on E-603 was fully updated
  - Drawing E-102 was added for "Hardwire Distribution Plan"
  - E-101 was updated according to changes
  - E-103 was updated according to changes
- **P.M. Changes**
  - Update of Breaker set up to be Schneider
  - Update of Sensors for the Automation Module
  - Inclusion of Receptacle types
Summary of Changes

Significant changes to the project manual that have occurred between submissions have been outlined below. The Construction Drawings should also be reviewed for relevant revisions.

February 14, 2013 Revision

The Project Manual has been updated from the previous issue. Revisions includes:

**Electrical con't:**

- **P.M. Changes**
  - Inclusion of INSTEON system
  - Update to Lighting
  - Change from Roofing Nail to Roofing Screw

**Structural:**

- **DWG. Changes**
  - Updated general notes, design loads, and wood material properties in S-001
  - Recalculated size of footings and finalized placement in S-101
  - Redesigned wood joists and columns in S-102
  - Created roof framing plan in S-103
  - Updated SIPs-dry module roof connection and also roof-column connection in S-105
  - Redesigned deck joists in S-106
  - Created elevation wall framing views in S-200 and S-201

- **PM Changes**
  - Updated Lateral Forces Overview to reflect new baseplate size and footing connections
  - Added calculations for column headers and NanaWall headers
  - Updated deck framing and calculations
  - Resized base plate
  - Checked for footing overturning due to uplift and shear
  - Added Simpson connections

**Architectural:**

- **DWG. Changes**
  - Redesigned Kitchen layout
  - Wood Rainscreen added to dry module
  - Changed window layout in dining room & flex room
  - Added Wall Type Dwg. A-551
  - Added Millwork Dwg. pgs. A-701 - A-710
  - Added Exterior Porch & Benches Dwg. A-450

- **PM Changes**
  - Added door hardware

Project Overview

The structural design must accommodate multiple phases of loading, including construction, transportation, and reassembly. Because of the nature of the competition and the location, the house was designed in modular components, wet and dry. The building must be transportable on US highways from Hoboken, New Jersey to Irvine, California. Further investigation is being done as to additional supports that will be provided during shipping to ensure there is enough rigidity and frame support. The service loads account for a three week duration at Orange County Great Park with elevated load criteria and a permanent location in Southern California close to the competition site, using conservative values. A change in final geographic location will require re-evaluation.

Structural Calculations

This project manual provides an evaluation of construction methods and structural calculations as stipulated by ASCE 7-10 and the Department of Energy for the 2013 Solar Decathlon. The objective of the Structures Team is to create a safe and sensible structural design that maximizes efficiency and minimizes the use of materials that require high energy during production. By using the ASD method to determine the governing load case, the team calculated the roof loads for the wet and dry module, the floor loads and also designed the baseplate and the footings. After working with the Architecture Team to choose appropriate building materials, the group designed the floor beams using Trus Joists at traditional 16” spacing. The dimensions of the house were constrained by the chosen transportation company and additional structural analysis was performed for the connections between the modules and also the roof-wall. The majority of the calculations were done in Microsoft Excel and SMath Studio to provide the designers with flexibility throughout the process and to make alterations easy to implement and check.

Lateral forces Overview

The lateral forces on the walls supplied through either seismic or wind forces will be supported by the designated shear walls. The plywood sheathing provide shear resistance through their typical construction, and following typical connections will be able to support lateral forces without any additional bracing. These forces will be transferred to the footings by a 6”x6” post that will be connected between the footing and the bottom of the house with a gusset plate, providing a moment support.

The base of the foundation will be layered 16”x24”x3/4” plywood sheets. A CCO Column Cap by Simpson will be shop welded to the steel plate, filed shim as necessary for post. A 6”x6” timber post will connect to the CCO Column Cap. These foundations will be anchored to the ground with two 1” diameter steel rods per footing.
## Structural Calculations

### Load Summary

- **General**
  - Occupancy Category: II (ASCE 7-10 Table 1.5-1)

- **Construction Loads**
  - Construction Live Load = 50 psf

- **Transportation Loads**
  - Wind Load: Service wind load assumed to control (See load calculations below)
  - Traveling Speed, V_{trailer} = 65 mph
  - Deceleration rate, a = 11.2 ft/s²

&= 3.7828
\end{align*}
\]
Structural Calculations

**Flexural Strength Capacity**

\[ M_{\text{capacity}} = 0.9 \left( f_{\text{bdimlumb}} \cdot S_{2 \times 8} \right) \]

**Flexural Strength Applied**

\[ M_{\text{capacity}} = 1773.9844 \text{ lbf ft} \]

\[ M_{\text{max}} = 1367.275 \text{ lbf ft} \]

\[ FS_M = \frac{M_{\text{capacity}}}{M_{\text{max}}} = 1.2975 \]

**Allowable Deflection Limit**

\[ \delta_{\text{allowable}} = \frac{\text{span}}{720} \]

\[ \delta_{\text{allowable}} = 0.0667 \text{ in} \]

\[ \Delta = 0.02 \text{ in} \]

\[ \text{Deflection = "OK"} \]
Material Properties

\[ F_c = f_{cdimlumb} \]

\( C_d = 1.6 \quad \text{(Wind and Seismic Load Duration)} \)

\( C_M = 1 \)

\( C_t = 1 \)

\( K_{cE} = 0.3 \quad c = 0.8 \quad \text{(visually graded lumber)} \)

\[ F_{cE} = F_{c} C_d C_M C_t \]

\[ E'_{\text{min}} = E_{dimlumb} C_d C_M C_t \]

\[ F_c = 1350 \text{ psi} \]

\[ F_{cE} = 2160 \text{ psi} \]

\[ E'_{\text{min}} = 1.6 \times 10^6 \text{ psi} \]

\[ F_{cE} = 142.7083 \text{ psi} \]

\[ F_{cE} = 140.7463 \text{ psi} \]

\[ C_p = 0.0652 \]

\[ F'_{c} = F_c - F_{cE} \]

\[ F'_{c} = 140.7463 \text{ psi} \]

\[ \frac{P_{\text{Axial WM}}}{A_{2x6}} \leq F'_{c} \]

\text{ColumnCompression=“OK”}

if \[ \frac{P_{\text{Axial WM}}}{A_{2x6}} \leq F'_{c} \]

else \[ \text{ColumnCompression=“NG”} \]

\[ F_{\text{Column}} = \frac{F'_{c}}{2.8461} \]

Therefore, Use 2" x 6" Dimensional Lumber Column, spaced 16" on center for wall framing in the Wet Module.
**Dry Module Wall**

4' Section Model:

Check (2) 2x6 Column for Compression:

**Load Properties**

\[ P_{AxialDM} = 2426.2 \text{lbf} \] (maximum)

**2" x 6" Dimensional Lumber Geometric Properties**

\[ L_{2x6} = 12 \text{ ft} \] (maximum)

\[ w_{2x6} = 2.15 \text{ in} \]

\[ d_{2x6} = 5.5 \text{ in} \]

\[ A_{2x6} = w_{2x6} \cdot d_{2x6} \]

\[ I_{2x6} = \frac{1}{12} w_{2x6}^3 \cdot d_{2x6} \]

\[ S_{2x6} = \frac{d_{2x6}^2}{2} \]

\[ A_{2x6} = 16.5 \text{ in}^2 \]

\[ I_{2x6} = 41.5938 \text{ in}^4 \]

\[ S_{2x6} = 15.125 \text{ in}^3 \]
**Material Properties**

\[ F_c = f_{cdimlumb} \]

\[ C_D = 1.6 \quad \text{(Wind and Seismic Load Duration)} \]

\[ C_M = 1 \]

\[ C_t = 1 \]

\[ K_{ce} = 0.3 \quad c_i = 0.8 \quad \text{(visually graded lumber)} \]

\[ F_{c\text{star}} = F_c \cdot C_D \cdot C_M \cdot C_t \]

\[ E'_{\text{min}} = E_{\text{dimlumb}} \cdot C_M \cdot C_t \]

\[ 0.822 \cdot E'_{\text{min}} \]

\[ F_{cE} = \left( \frac{L_{2x6}}{\text{in}} \right) \]

\[ \min \left( \frac{w_{2x6}}{\text{in}}, \frac{d_{2x6}}{\text{in}} \right) \]

\[ 1 + \left( \frac{F_{cE}}{F_{c\text{star}}} \right) \]

\[ 2 \cdot c \]

\[ C_p = \frac{F_{c\text{star}}}{2 \cdot c} \]

\[ F'_{c} = F_c \cdot C_D \cdot C_M \cdot C_t \cdot C_p \]

\[ F'_{c} = 535.5251 \quad \text{psi} \]

\[ F_{cE} = 570.8333 \quad \text{psi} \]

\[ F_{cE} = 2160 \quad \text{psi} \]

\[ F_{c} = 1350 \quad \text{psi} \]

\[ C_p = 0.2479 \]

\[ F_{cE} = 1.6 \cdot 10^{6} \quad \text{psi} \]

\[ E_{\text{min}} = 1.6 \cdot 10^{6} \quad \text{psi} \]

\[ P_{AxialDM} \leq F'_{c} \]

\[ \text{ColumnCompression} = "OK" \]

\[ \text{else} \]

\[ \text{ColumnCompression} = "NG" \]

\[ \frac{P_{AxialDM}}{A_{2x6}} \]

\[ \sqrt{\frac{F'_{c}}{A_{2x6}}} \]

\[ \text{FSColumn} = 3.642 \]

Therefore, Use 2" x 6" Dimensional Lumber Column, spaced 16" on center for wall framing in the Dry Module. Every 4', use (2) 2" x 6" Dimensional Lumber Columns to support the load of the Exterior Roof Columns.

Deflection = "NG"
Deck Framing

Note: All Deck Framing Calculations were completed using the ASD Method and a flexural bending capacity of 1100 psi for the Douglas Fir, Gr 1.

Deck Joists
2x10 Dimensional Lumber

Conservatively, use the longest span of deck found on the east side of the house.

2x10 Geometric Properties

\[ w_{2\times10} = 1.5 \text{ in} \]
\[ t_{2\times10} = 9.25 \text{ in} \]
\[ A_{2\times10} = w_{2\times10} t_{2\times10} \]
\[ I_{2\times10} = \left( \frac{1}{12} \right) w_{2\times10} t_{2\times10}^2 \]
\[ S_{2\times10} = \frac{I_{2\times10}}{t_{2\times10}} \]

Shear Strength Capacity

\[ V_{\text{capDeck}} = 1.0 \left( f_{\text{vdimlumb}} A_{2\times10} \right) \]

\[ V_{\text{capDeck}} = 2497.5 \text{lbf} \]

Flexural Strength Capacity

\[ M_{\text{capDeck}} = 1.0 \left( f_{\text{bdimlumb}} S_{2\times10} \right) \]

\[ M_{\text{capDeck}} = 2254.9284 \text{ lbf ft} \]

Live Load Deflection Limit

\[ \delta_{L} = \frac{\text{span}}{360} \]

\[ \delta_{L} = 0.3333 \text{ in} \]

0.5 Dead + Live Deflection Limit

\[ \delta_{DL} = \frac{\text{span}}{240} \]

\[ \delta_{DL} = 0.5 \text{ in} \]

Load Conditions

Dead Deck = 12 psf
Live Deck = 100 psf
Wind Deck = 4.4 psf

Factored Load

\[ W_{\text{DeadDeck}} = \text{Dead Deck} \times 1.0 \]
\[ W_{\text{LiveDeck}} = \text{Live Deck} \times 1.0 \]
\[ W_{\text{WindDeck}} = \text{Wind Deck} \times 0.5 \]

\[ W_{\text{FactoredDeck}} = 114.2 \text{ psf} \]

Dead Deck = 16 ft

\[ W_{\text{DeadDeck}} = 16 \text{ ft} \]
Structural Calculations

26 Mar 2013 14:57:15 - Deck Floor System.sm

Flexural Strength Applied

\[ M_{\text{Deck}} = \frac{w_{\text{totDeck}} \cdot \text{span}^2}{8} \]

\[ M_{\text{Deck}} = 1903.3333 \text{lbf ft} \]

Live Load Deflection

\[ \Delta_L = \frac{5 \cdot w_{\text{LiveDeck}} \cdot \text{span}^4}{384 \cdot E_{\text{dimlumb}} \cdot I_{2\times10}} \]

\[ \Delta_L = 0.1685 \text{in} \]

Dead Load Deflection

\[ \Delta_D = \frac{5 \cdot w_{\text{DeadDeck}} \cdot \text{span}^4}{384 \cdot E_{\text{dimlumb}} \cdot I_{2\times10}} \]

\[ \Delta_D = 0.0202 \text{in} \]

0.5 Dead + Live Deflection

\[ \Delta_{DL} = 0.5 \cdot \Delta_D + \Delta_L \]

\[ \Delta_{DL} = 0.1786 \text{in} \]

Factors of Safety

\[ FS_V = \frac{V_{\text{capDeck}}}{V_{\text{Deck}}} \]

\[ FS_M = \frac{M_{\text{capDeck}}}{M_{\text{Deck}}} \]

if \( FS_V > 1 \) and \( FS_M > 1 \)

Strength = "OK"

else

Strength = "NG"

Check Deflection

if \( \Delta_L \leq \delta_L \) and \( \Delta_{DL} \leq \delta_{DL} \)

Deflection = "OK"

else

Deflection = "NG"

Therefore, use 2x10 Douglas Fir, Gr. 1, 16 inches on center.
Structural Calculations

Deck Beam
(2) 2x10 Dimensional Lumber conservatively use

\[ \text{span} = 6 \text{ ft} \]
\[ \text{joistspan} = 10 \text{ in} \]
\[ \text{joistspacing} = 16 \text{ in} \]

**2x10 Geometric Properties**

\[ w_{2,2x10} = 2.15 \text{ in} \]

\[ t_{2,2x10} = 9.25 \text{ in} \]

\[ A_{2,2x10} = 2 \times 2 \times 10 \times t_{2,2x10} \]

\[ I_{2,2x10} = \frac{1}{12} \times w_{2,2x10} \times t_{2,2x10}^2 \]

\[ S_{2,2x10} = \frac{t_{2,2x10}}{2} \]

**Shear Strength Capacity**

\[ V_{\text{capDeckBeam}} = 1.0 \left( f_{\text{dimlumb}} \times A_{2,2x10} \right) \]

**Flexural Strength Capacity**

\[ M_{\text{capDeckBeam}} = 1.0 \left( f_{\text{dimlumb}} \times S_{2,2x10} \right) \]

**Live Load Deflection Limit**

\[ \delta_\text{DL} = \frac{0.3L}{240} \]

**Dead + Live Deflection Limit**

\[ \delta_\text{L} = \frac{0.2L}{360} \]

**Load Conditions**

As an approximation, distribute Deck Joist loads:

\[ w_{\text{DeadDeckBeam}} = \frac{1}{\text{joistspan}} \times w_{\text{DeadDeck}} \]

\[ w_{\text{LiveDeckBeam}} = \frac{1}{\text{joistspan}} \times w_{\text{LiveDeck}} \]

\[ w_{\text{WindDeckBeam}} = \frac{1}{\text{joistspan}} \times w_{\text{WindDeck}} \]

\[ w_{\text{totDeckBeam}} = 1.0 \times w_{\text{DeadDeckBeam}} + 1.0 \times w_{\text{LiveDeckBeam}} + 0.5 \times w_{\text{WindDeckBeam}} \]

*571 lbft*

*2497.5 lbft*

*2254.92 lbft*

*0.2 in*

*0.3 in*

*60 lbft*

*500 lbft*

*22 lbft*
Shear Strength Applied

\[ V_{DeckBeam} = \frac{w \cdot \text{span}}{2} \]

\[ V_{DeckBeam} = 1713 \text{ lbf} \]

Flexural Strength Applied

\[ M_{DeckBeam} = \frac{w \cdot \text{span}^2}{8} \]

\[ M_{DeckBeam} = 2569.5 \text{ lbf ft} \]

Live Load Deflection

\[ \Delta_L = \frac{5 \cdot w \cdot \text{span}^4}{384 \cdot E_{\text{dimlumb}} \cdot I_{2 \cdot 2 \times 10}} \]

\[ \Delta_L = 0.0409 \text{ in} \]

Dead Load Deflection

\[ \Delta_D = \frac{5 \cdot w \cdot \text{span}^4}{384 \cdot E_{\text{dimlumb}} \cdot I_{2 \cdot 2 \times 10}} \]

\[ \Delta_D = 0.0049 \text{ in} \]

0.5 Dead & Live Deflection

\[ \Delta_{DL} = 0.5 \cdot \Delta_D + \Delta_L \]

\[ \Delta_{DL} = 0.0434 \text{ in} \]

Factors of Safety

\[ FS_V = \frac{V_{capDeckBeam}}{V_{DeckBeam}} \]

\[ FS_V = 2.9159 \]

\[ FS_M = \frac{M_{capDeckBeam}}{M_{DeckBeam}} \]

\[ FS_M = 1.7551 \]

if \( FS_V > 1 \) \& \( FS_M > 1 \)

Strength = "OK"

else

Strength = "NG"

Check Deflection

if \( \Delta_L < \delta_L \) \& \( \Delta_{DL} < \delta_{DL} \)

Deflection = "OK"

else

Deflection = "NG"

Therefore, use (2) 2x10 Douglas Fir, Gr. 1 beams.

Footing Post Design

\[ P_{Axial} = 10265.5 \text{lbf} \] (maximum)

**Check 6x6 Post for Compression:**

**Geometric Properties**

| \( L_{post} \) | 2 ft \[ \text{(maximum)} \] |
| \( b_{post} \) | 5.5 in |
| \( h_{post} \) | 5.5 in |
| \( A_{post} \) | \( b_{post} \cdot h_{post} \) |

| \( I_{post} \) | \( \frac{1}{12} b_{post} \cdot h_{post}^3 \) \[ \text{(minimum)} \] |
| \( S_{post} \) | \( \frac{1}{6} b_{post} \cdot h_{post}^2 \) \[ \text{(minimum)} \] |

**Material Properties**

\[ f_{c} = f_{cd} \text{dimlumb} \]
\[ C_{D} = 1.6 \] (Wind and Seismic Load Duration)
\[ C_{M} = 1 \]
\[ C_{t} = 1 \]
\[ K_{cE} = 0.3 \]
\[ c = 0.8 \] (visually graded lumber)

\[ F_{c} = \frac{f_{c}}{C_{D} \cdot C_{M} \cdot C_{t}} \]

\[ E'_{min} = E_{dimlumb} \cdot C_{M} \cdot C_{t} \]

\[ F_{cE} = \left( \frac{L_{post}}{in} \right) \cdot \min \left( \left( \frac{b_{post}}{in}, \frac{h_{post}}{in} \right) \right) \]

\[ C_{p} = \frac{1}{2} \left( \frac{F_{cE}}{F_{cstar}} \right) - \left( \frac{C_{p}}{2} \right) \cdot \left( \frac{F_{cE}}{F_{cstar}} \right)^2 \]

\[ F'_{c} = F_{c} \cdot C_{D} \cdot C_{M} \cdot C_{t} \cdot C_{p} \]

\[ \text{if } \frac{P_{Axial}}{A_{post}} \leq F'_{c} \]

ColumnCompression = "OK"

else

ColumnCompression = "NG"
Since the timber post will likely fail before the steel anchor bolts, check the timber capacity:

**Shear Strength Capacity**

$$ V_{capFooting} = 0.75 \left( f_{vdmilumb} A_{post} \right) $$

$$ V_{capFooting} = 4083.75 \text{lbf} $$

**Flexural Strength Capacity**

$$ M_{capFooting} = 0.9 \left( f_{bdimlumb} S_{post} \right) $$

$$ M_{capFooting} = 2152.4766 \text{lbf ft} $$

$$ V_{Max} = 1750 \text{lbf} $$

$$ M_{Max} = 1750 \text{lbf ft} $$

$$ F_{SV} = \frac{V_{capFooting}}{V_{Max}} \quad F_{SV} = 2.3336 $$

$$ F_{SM} = \frac{M_{capFooting}}{M_{Max}} \quad F_{SM} = 1.23 $$

Since the Factor of Safety for Shear and the Factor of Safety for Flexure are both greater than 1, the Footing is OK.
Footing Base Design

**Geometric Properties**

- \( b_{footing} = 16\) in
- \( l_{footing} = 24\) in
- \( d_{plywood} = \frac{3}{4}\) in

**Load Conditions**

- \( P_{Axial} = 10265.5\) lbf (maximum)

Assume that the load is distributed in a 16" x 16" square on the footing, and the extra length is used only to meet the 2' minimum distance requirement between the 1" diameter steel anchor bolts.

\[
w = \frac{P_{Axial}}{\min\left(\frac{b_{footing}}{l_{footing}}\right)} \quad \Rightarrow \quad w = 7699.125 \text{ lbf/ft}
\]

**Determine Number of Plywood Sheets (Strength Based):**

**Section Modulus Required:**

\[
M_{\text{max}} = \frac{w \cdot \min\left(\frac{b_{footing}}{l_{footing}}\right)^2}{2}
\]

\[
S_{\text{req}} = \frac{M_{\text{max}}}{l_{plywood}}
\]

**Depth Required:**

\[
\text{depth} = \sqrt[6]{\frac{S_{\text{req}} \cdot 6}{\min\left(\frac{b_{footing}}{l_{footing}}\right)}}
\]

\[
n_{\text{sheets}} = \frac{\text{depth}}{d_{plywood}}
\]

Therefore, use at least 3 sheets of 3/4" plywood for the base of the footing.

**Check Allowable Bearing Contact:**

- if \( \frac{P_{Axial}}{\min\left(\frac{b_{footing}}{l_{footing}}\right)^2} < 6000 \text{ psf} \)  
  - BearingContact = "OK"
- else  
  - BearingContact = "NG"
**Structural Calculations**

**Determine Number of Plywood Sheets (Deflection Based):**

Limit deflection at end: \( \delta = \frac{1}{16} \text{ in} \)

**Moment of Inertia Required:**

\[
I_{\text{req}} = \frac{\min\left(\frac{b_{\text{footing}} \cdot l_{\text{footing}}}{2}\right)^4}{8 \cdot E \cdot \text{plywood} \cdot \delta}
\]

\( I_{\text{req}} = 5.2039 \text{ in}^4 \)

**Depth Required:**

\[
\text{depth} = \frac{\sqrt{12 \cdot \frac{I_{\text{req}}}{\min\left(\frac{b_{\text{footing}} \cdot l_{\text{footing}}}{2}\right)}}}{12}
\]

\( \text{depth} = 1.9837 \text{ in} \)

\[
\frac{\text{depth}}{\text{dplywood}} = 2.6449
\]

**Therefore, use at least 3 sheets of 3/4" plywood for the base of the footing.**

**Check Allowable Bearing Contact:**

\[
\text{if } \frac{P_{\text{Axial}}}{\min\left(\frac{b_{\text{footing}} \cdot l_{\text{footing}}}{2}\right)^2} < 6000 \text{ psf}
\]

BearingContact = "OK"

else

BearingContact = "NG"

The Ecohabit House contains two unlisted electric components which has been detailed below.

**Special House Controls – Smart Monitoring System**

The “Special House Controls - Smart Monitoring System” is a custom, master-slave module system that will enable the Smart House to monitor the state of the house and make decisions based on user preference and state data in order to maximize the energy efficiency of the house. The “Special House Controls - Smart Monitoring System” uses cheap, off the shelf products to control and monitor all of the rooms in the home separately and independently through a single tablet application. We will be using DNR18US05, 5V with a maximum current of 3Amps, below the limitation of 8Amps as per Table 11(A), Chapter 9

  - Security

**Fig. 1.1 Hardware Flow Chart**
Summary of Unlisted Electrical Components

Hardware: Monitoring System

Master Module

The Master module is the main control center for the monitoring system of the house. This module is where all sensor information is sent. The master is where the monitoring system connects to the main server hub through a USB. After passing the data along to the main server, the master module then waits for the decisions from the server. Once it receives the instructions, the master module then sends out commands to control the homes systems (lighting, IR, etc).

- Technical Specifications
  - Arduino Pro Mini microcontroller based on the Atmel’s ATMega 168
    - 5 Volts
      - XP-Power DNR10US05 power supply
      - 18AWG
    - 16Mhz oscillator
    - 14 GPIO with 6 that support PWM
  - XBee 1mW Wire Antenna - Series 1 (802.15.4)
  - USB interface to the computer server in the mech. Room

![Master Module Breadboard Schematics](image)

Fig. 1.2 Master Module Breadboard Schematics
Slave Module for Ambient Conditions

The Slave modules are sensory modules put into three rooms, the bedroom, main room, and flex room. These modules contain a temperature and humidity sensor, a motion sensor, and a light sensor (photoresistor) and collect data on the state of the house. This data is then transferred to the master module through a mesh communication network.

- Technical Specifications
  - Arduino Pro Mini microcontroller based on the Atmel’s ATMega 168
    - 5 Volts
    - XP-Power DNR10US05 power supply
    - 18AWG
    - 16Mhz oscillator
    - 14 GPIO with 6 that support PWM
  - XBee 1mW Wire Antenna - Series 1 (802.15.4)
  - Temperature/Humidity
    - Sensiron SHT1
  - Motion Sensor
    - Honeywell DT7435 dual tech.
    - PIR and Microwave
    - 12V at 25mA
  - Photoresistor
    - Perkinelmer VT900
    - 5V
    - 12K Ohm typical

Fig. 1.3 Slave Module for Ambient Conditions Breadboard Schematics
Slave Module for Power Monitoring

The power sensor modules include CT sensors put on the circuits coming off of the breakers. Since the voltage of the breakers is known, using the current the power being used off each circuit can be calculated. This information can then be passed to the house server, which can then be communicated to the user via the mobile application.

- Technical Specifications
  - CT Sensor
    - Brultec Micro-40 * 38
    - Brultec Split 200 *1
Safety test of the components

To ensure safe operation during the public event, the team will complete the following minimum testing on the "Special House Controls - Smart Monitoring System" and submit the results to the Organizers:

1) In Progress - Prototype Test: The module prototypes are constructed and set up in a prototypical environment. This allows the team to make sure the modules are functioning and safe for use for in a living situation.

2) Future - Load test: Set up the actual sensor modules similar to how they will be deployed in the house. Test the interface with the home server and lighting control systems in order to track the performance of the system.

3) Future - Full Scale Testing: After construction in the Spring, have a full week of real-time testing to make sure the system is safe for the California Competition.

## Stevens House Team Electrical Engineer

Dimitri Koshkin  
dimitri.koshkin@gmail.com
Summary of Reconfigurable Features

The Ecohabit House is equipped with one reconfigurable feature affecting Rule 6-2. The reconfigurable element pertain to the millwork in the Flex Room will be demonstrated to the Architecture, Market Appeal and Engineering Juries only during their walkthroughs. The team will not be demonstrating the reconfigurable wall during the Communications Jury walkthrough and therefore not demonstrating the reconfigurable wall during any of the public tours.
Introduction

Energy analysis is the basis for the design of a zero-energy house. Accurate models are needed to ensure the success of Ecohabit during the competition and as a permanent home.

During the design process, numerous energy analyses were performed in order to optimize the one family home. As the design of Ecohabit progressed, so did the energy analyses and models. An optimization program was utilized for the initial design of the house. A basic load model using ASHRAE load calculations, was then created to get a more accurate model. These basic calculations were performed each time an updated design was presented. With each redesign, the energy models also improved. Energy analyses were performed in order to complete the initial design, re-design, HVAC system design, an annual electricity demand prediction, determination size of PV, and finally to predict Stevens House's performance in the competition.

Tools Utilized

The tools used varied as a result of the progression of the design. Models were used to optimize dimensions, optimize orientation, pick materials, determine mechanical systems, and determine electric systems. The tools used are as follows:

Rhinoceros / Grasshopper / Diva / Galapagos
Based on dimensions, orientation, and window to wall ratio, the Grasshopper plug-in Diva, was utilized to perform optimization calculations. The initial optimization calculations led to the design utilized for the schematic design submission; however construction and transportation logistics required the redesign of the house. The house changed from an angled “L” shape to a much more easily transported and constructed true “L” shape.

ASHRAE Calculations
ASHRAE load calculations provide the minimum requirements for a system to have an energy efficient design, specifically for low-rise residential buildings. Each outer wall, window, roof and floor component is associated with its dimensional, heat resistance, and emissivity properties. Standard ASHRAE tables are then referenced to compile a calculation for maximum heating and cooling loads for the climate conditions in the specified location.

Manual J8 Load Calculations
Using Manual J8 calculations the wall, window, roof, and floor sections are individually defined by their length dimensions and thermal resistance values. This method creates a matrix of elements that aid in the calculations of heat movement through the boundaries of the house. The Manual J8 calculation determines the maximum heating and cooling loads necessary for the house to cover 99% of the coldest days in the year and the top 1% of the hottest days. The Manual J8 calculations allowed for initial growth and re-design as the Ecohabit progressed.

McQuay Air-conditioning Duct Sizer program
This tool is used to calculate proper duct sizing for rectangular and radial ducts. The program takes into account varying air temperatures and relative humidity. It uses the parameters volumetric flow rate, head loss, velocity, and duct diameter to aide in properly sizing ducts.
Energy Analysis Results and Discussion

SolidWorks Flow Simulation
SolidWorks Flow Simulation was used for Ecohabit to verify duct parameters. The flow simulation was used to calculate the air properties such as volumetric flow rate, velocity, and pressure loss at cross sections throughout the duct work.

IES VE Pro
IES VE Pro is an energy modeling program known for its accuracy. Among other things, it combines solar shading calculations, internal gains, geometry, orientation, and climate in order to calculate accurate heating and cooling loads. IES provided Team Stevens with a refined energy model, capable of accurately predicting the performance of Ecohabit based on the design. Once the model is constructed, the weather data, the internal loads, with schedule, and the construction materials are all selected. Additionally, IES VE Pro takes into account solar shading, gathering information on solar energy based on shading constructed in the model. This information is then utilized to calculate loads for the pre-determined timespan.

Energy Analysis

The energy analysis presented below is the combination of results utilizing the tools listed above. First, data related to the house was collected, including weather data for Irvine, California, material attributes, and predicted internal loads. Next, the load calculations for Ecohabit were performed using IES VE Pro. The loads calculated were then used in to size the air distribution unit. Finally, the electrical loads and expected power output from the Photovoltaic were calculated.

Weather Analysis
Weather data for Irvine, California was gathered and put in a usable form. The energy model considered average temperatures, maximum temperatures, and humidity. This information can be seen in the graphs below.

![Fig. 5.1 Daily Average Temperature](image1)
![Fig. 5.2 Weekly Average Temp. & Dew Point in Irvine, CA](image2)
U/R Values
Construction materials were picked based on their aesthetics, usability, and thermal properties. The chart below, describes the thermal resistance (R-Value) and heat transfer coefficient (U-Factor) for the materials to be used on the Ecohabit. These properties were obtained from Factory Specs and utilized for the energy analysis.

Fig. 5.4 R-Values per orientation

Fig. 5.3 displays the daily temperature and humidity values for Irvine, California during the competition. This chart assisted in predicted the total usage of the internal systems of the house for the competition.
Internal Gains

Preliminary calculations for the internal loads were needed for the initial cooling and heating load calculations and simulations. The internal load calculations were generated by referencing ASHRAE handbook tables for standard residential appliances. Internal heat generation affects the load calculations by putting a larger load on the air-conditioning system during the cooling season and lessening the load during the heating season.

The ASHRAE manuals give standard sensible and latent heat loads created by people, plants, and appliances so a generic model can be made to calculate the internal loads created in the house. Each appliance is defined by its type and size to be referenced to its heat contribution. The major heat contributions to the space come from people and lights. The appliances that create large amounts of heat such as the dryer and stove/oven, are vented to a place where the heat is not objectionable and therefore do not significantly affect the internal loads. Figure 5.5 shows the predicted heat gain per day due to the heat generation rate and the amount of time used per day. Three people in the house for 16 hours a day produces 16.8 KBTu of energy per day. This represents the largest internal heat gain for the house. By implementing these figures, the cooling and heating loads can be more accurately represented.

Fig. 5.5 Predicated Heat Gain due to Internal Loads
Energy Analysis Results and Discussion

**Loads Calculated**

As stated before, the heating and cooling loads were calculated multiple times throughout the design process. IES VE Pro was used to accurately estimate the expected loads based on the input variables discussed above. As seen in Fig. 5.7 the maximum cooling load calculated is 21.52 kBtu/h and occurs in the month of September. Similarly, the maximum heating load calculated is 7.15 kBtu/h and occurs in the month of December.

As part of the load calculation performed by IES VE Pro, a solar shading and solar energy analysis was performed. Below, Fig 5.8 provides a visual representation of the shading benefit the roof provides on October 12, at 0900. The solar energy analysis shown in the image provides the data for an entire year.
Energy Analysis Results and Discussion

Determination of Air Distribution System

Using loads calculated by IES VE Pro, and supported by the Manual J8 and ASHRAE calculations, an air handler system was selected to not only meet, but exceed the extreme heating and cooling needs. Daikin Heat Pump and Daikin Sky Air indoor air handler is the system being implemented in Ecohabit. The unit has favorable energy, air distribution, and architectural qualities. The unit carries a heating and cooling load of 24,000 BTU/h Therefore, the calculated heating and cooling minimums are met for the house and the qualitative goal of a hidden system is achieved.

To meet competition requirements, Ecohabit must maintain a temperature zone between 71°F and 76°F. The system chosen meets the minimum requirements for the loads determined using the IES model, but to ensure proper circulation and air distribution, the Stevens team chose a ducted system rather than a ductless system. Additionally, the ducted system is centralized making it easier to control and maintain the required temperature.

The flow analysis on the ducts shows that that the max static pressure loss through the ducts is 0.265 w.g. The pressure losses come from the friction associated with the duct lengths and the components such as bends and tees. These major and minor head losses, respectively, make the ducted system less efficient; however, proper airflow in the house outweighs the energy loss. Additionally, using the McQuay Air-conditioning Duct Sizer program, in combination with calculated volumetric flow, the ducts were properly sized and balanced. The system was designed to have velocities no higher than 600 ft/min and to have static pressure loss less than 0.9 w.g. for the air handler to operate as designed.
A computational fluid analysis was performed using Solidworks Flow Simulation to ensure the standards were met. As seen in Fig. 5.9, the maximum exit velocity for all of the registers is 545 ft/min which is under 600 ft/min, the high limit velocity. All of the actual volumetric flow rates, outputted by the CFD are within 10% of the calculated goal flow rates. Therefore the flow simulation verifies that the duct work will perform as designed.

Fig. 5.9 Room Diffuser Values

Fig. 6.0 displays the velocity flow of air through the duct work. The exhaust and supply are labeled. The analysis shows velocity gradients and concentrations of high velocity at points of minor head loss or geometric changes in the duct work. By analyzing the ductwork in this way, the pressure losses can be minimized to an acceptable level.
Energy Analysis Results and Discussion

Determination of Electrical System

As seen in Fig 6.2, seen below, the total yearly energy usage is predicted to be 6490kWh. This was predicted using data provided by Energy Star as well as historical data for southern California. Using the same conditions, it is predicted that the usage for the house during the competition period will be 130kWh. The usage breakdown for the competition period follows the same breakdown as the yearly usage shown in Fig 6.1

Fig. 6.1 Household Energy Usage

*Fig. 6.2*
Energy Analysis Results and Discussion

Using the predicted usage of 6670 kWh annual energy consumption and 134.7kWh competition consumption, it was determined that the house needed a 6.4kWh photovoltaic system. In designing the system, the team decided to use DOW Powerhouse Solar Shingles. The decision to use this product is based on more than just energy balances. The shingles are building integrated, meaning they appear to be regular shingles and protect the roof as regular shingles do. Additionally, the shingles snap together, making the installation easier than the average solar panel installation.

Based on the current roof design, the team calculated an ability to implement 489 shingles. Each shingle is projected to produce 12 Watts leading to a total DC power production of 5.8kW. Based on this, the total predicted energy production is 8,687 kWh annually. Using the same weather and solar data for Southern California, the predicted production for the competition period is 163.7kWh, 18% more than the predicted usage.

Fig. 6.3 displays the average weekly energy production in Irvine, CA that would be produced using the 5.8 kW DC Dow Powerhouse solar shingles. In order to examine the production for the competition, the time span for the Solar Decathlon, September 24 and October 18, is highlighted in red. Using the data provided by NREL, the average annual production is calculated to be almost 8687kWh.

Fig. 6.4 displays the predicted solar production for the 192 hours of the measured competition time. The competition period starts October 3, at 1100 and ends on October 11, at 1100. The total predicted energy production for the competition period is 163.7 kWh.

Solid Sawn Joist Hangers

**LUS/HUS Double Shear Joist Hangers**

This product is preferable to similar connectors because of:
- a) easier installation, b) higher loads, c) lower installed cost, or a combination of these features.

See Hanger tables on pages 71-76. See Hanger Options on pages 215-224 for hanger modifications, which may result in reduced loads.

All hangers in this series have double shear nailing. This innovation distributes the load through five points on each joist nail for greater strength. It also allows the use of fewer nails, faster installation, and the use of standard nails for all connections. (Do not bend or remove tabs.)

**MATERIAL.** See tables, pages 71-76.

**FINISH.** Galvanized. Some products available in stainless steel or ZMAX® coating; see Corrosion Information, page 14-15.

**INSTALLATION.** Use all specified fasteners. See General Notes.
- Nails must be driven at an angle through the joist or truss into the header to achieve the table loads.
- Not designed for welded or nailable applications.
- 16d screws (0.148" dia. x 3½" long) may be used where 10d commons are specified with no reduction in load. Where 16d commons are specified, 10d commons or 16d screws (0.148" dia. x 3½" long) may be used at 0.85 of the table load.
- With 3x carrying members, use 16x2½" nails into the header and 16d commons into the joist with no load reduction.
- With 2x carrying members, use 10x2½" nails into the header and 10d commons into the joist, reduce the load to 0.80 of the table value.
- Use stainless-steel (SS) nails with stainless-steel (SS) hangers.

**OPTIONS.** LUS hangers cannot be modified.
- HUS hangers available with the header flanges turned in for 2-2x (3½") and 4x only, with no load reduction. See the HUS Concealed Flange illustration.

---

**LOAD TABLE EXPLANATION**

This icon identifies products approved for installation with the Simpson Strong-Tie Strong-Drive® SD structural-connector screw. See page 27 for more information.

**Joist Size.** This shows the size of the joist member.

**Model No.:** This is the Simpson Strong-Tie product name.

**Dimensions: W, H, B.** This shows the product dimensions (width, height, and base in this case) referenced in the product drawing.

**Nails: This shows the fastener quantity and type required to achieve the table loads.**

**Min/Max:** Refers to min. or max. nailing for products with round and triangle holes. Min. nailing uses round holes, and max. nailing uses round and triangle holes to achieve maximum load.

**Fasteners:**
- **Gauge:** Product material
- **Material:**
  - **Min**:
  - **Max**

**Header: Joist**

**Uplift:**
- **Floor:**

**Code Ref.**

This icon identifies products that are available with additional corrosion protection. See pages 14-15 for additional information.

**CATALOG DEFINITION:**

NAILS: 16d = 0.162" dia. x 3½" long, 10Dx1¼ = 0.148" dia. x 1½" long. See page 22-23 for other nail sizes and information.

Throughout this catalog a footnote will typically be provided indicating the required nail diameter and length. All installations should be designed only in accordance with the allowable
### CSI #: 05 05 23

#### CC/ECC/ECCU Column Caps

Column caps provide a high-capacity connection for column-beam combinations.

- **MATERIAL:** CC3½, CC4, CC46, CC48, CC48-6, CC6, CC66, CC68, CC6-7½, ECC3¾, ECC4, ECC46, ECC6, ECC6-62, ECC64, ECC68, ECC6-7½—7 gauge; all others—3 gauge
- **FINISH:** Simpson Strong-Tie® gray paint; may be ordered HDG; CC, ECC—no coating

#### Installation
- Use all specified fasteners. See General Notes.
  - Bolt holes shall be a minimum of \( \frac{3}{8} \)\(^\circ\) to a maximum of \( \frac{3}{4} \)\(^\circ\) larger than the bolt diameter (per 2005 NDS, section 11.1.2).
  - Contact engineered wood manufacturers for connections that are not through the wide face.

#### Options
- Straps may be rotated 90° where \( W_2 = W_1 \) (see illustration) and for CC3½-6.
- **CCOECC:** Column cap only (no straps) may be ordered for field-welding to pipe or other columns. CC/CO/CCO dimensions are the same as CC/ECC.
- **CCOB:** Any two CCOS may be specified for back-to-back welding to create a cross beam connector. Use the table loads; the load is no greater than the lesser element employed.

#### Codes
- See page 13 for Code Reference Key.

These products are available with additional corrosion protection. Additional products on this page may also be available with this option, check with Simpson Strong-Tie for details.

</tbody>
</table>

1. Uplift loads have been increased for wind or earthquake with no further increase allowed; reduce where other loads govern.
2. Down loads may not be increased for short-term loading and shall not exceed the post capacity. See pages 229-227 for common post allowable loads.
3. CC uplift loads do not apply to splice conditions.
4. Splice conditions with CCs must be detailed by the Designer to transfer tension loads between spliced members by means other than the column cap.
5. Permitted loads are not permitted to be in the same vertical plane in the same story.
6. Structural composite lumber columns have sides that show either the wide face or the edges of the lumber strands/venners. Values in the tables reflect installation into the wide face. See technical bulletin T-SCOLUMN for values on the narrow face (edges) 7. Beam depth must be at least as tall as \( H_1 \).
8. For 5½" engineered lumber, use 5½" models.
9. CO welded to steel column will achieve same load as CC. Steel column width
CSI #: 05 05 23

Straps & Ties

H/TSP  Seismic & Hurricane Ties

Simpson Strong-Tie® hurricane ties provide a positive connection between truss/rafters and the wall of the structure to resist wind and seismic forces. New additions to the line provide even more options.

- **H10A**: The heavy-duty design of the H10A available with a 2” wide throat to accommodate rough lumber
- **H10A-2**: The H10A design with a 3” throat for double 2x members
- **H2ASS, H2.5ASS and H10ASS**: Popular ties now available in stainless steel.

**MATERIAL**: See table.

**FINISH**: Galvanized, H7Z and H12—ZMAX® coating. Some models available in stainless steel or ZMAX; see Corrosion Information, page 14-15 or visit www.strongtie.com.

**INSTALLATION**: Use all specified fasteners. See General Notes.
- **H1**: Can be installed with flanges facing inward (reverse of H1 installation drawing; number 7).
- **H2.5ASS, H9, H4, H5 and H6**: Ties are shipped in equal quantities of right and left versions (right versions shown).
- **Hurricane ties do not replace solid blocking.**
- **When installing ties on plated trusses (on the side opposite the truss plate)** do not fasten through the truss plate from behind. This can force the truss plate off of the truss and compromise truss performance.
- **H10A optional nailing to connect shear blocking, use 8d nails.**
- **Slots allow maximum field bending up to a pitch of 6:12**: Use H10A sloped loads for field bent installation.

**CODES**: See page 13 for Code Reference Key Chart.
CSI #: 05 05 23

**Caps & Bases**

### ECQLQ/CCQ/CCTQ Column Caps

The ECQLQ, CCCQ and CCTQ column caps provide high-capacity, multiple-beam-to-column connector options. The design uses Simpson Strong-Tie® Strong-Drive® screws (SDS) to provide faster installation and a lower profile compared to standard through bolts. Screws are configured to provide high uplift design values.

**MATERIAL:** 7 gauge

**FINISH:** Simpson Strong-Tie® gray paint, also available in HDG

**INSTALLATION:**
- Install Simpson Strong-Tie SDS 1/4”x2” wood screws, which are provided, in all round holes. (Lap screws will not achieve the same load.)
- No additional welding is allowed.

**OPTIONS:**
- Many combinations of beam and post sizes can be manufactured (refer to worksheet T-CCQLC-WS).
- Available in widths up to 8’ wide.
- ECQLQ is available in left or right side beam orientations. Specify ECQLQ or CCCQ.
- Straps may be rotated about column Wx > Wy.
- Column caps may be ordered without the column straps for field welding to a column. No loads apply. Specify CCCQLQ/CCQLQ/ECQLQ.

**ORDERING:**
- The L dimension varies depending on the width of the side strap (Wy or Wz). Contact Simpson Strong-Tie for exact dimensions.
- Minimum beam strap height (Hx) is 7”. Side beam straps (Hz or Hg) can vary in height with the minimum height of 7”. Specify the side strap height from the top of the cap.
- Example Order: 4x Main Beam, 6x Post, 4x Side Beam (oriented to the left) is ordered as ECQLQLQ4640SDS

**CODES:** See page 13 for Code Reference Key Chart.

### ECCL/CCC/CCT Column Caps

Column-to-beam connections often have multiple beams framing on top of a column. L, T, and Cross column caps provide design solutions for this application. Many combinations of beam and post sizes can be manufactured (refer to worksheet T-CLCLC-WS for details) with the following criteria applied:

- The download capacity shall be determined from the capacity for the unmodified product (see page 64). The side beam can take a maximum of 40% of the download and shall not exceed 10,665 lbs. The sum of the loads for the side beam(s) and main beam cannot exceed the table load.
- Uplift loads do not apply for ECCL caps. For CCC and CCT, uplift loads from table apply for main beam only.
- The column width in the direction of the main beam must be the same as the main beam width (Wy).
- Specify the slippage height from the top of the cap. The minimum side slippage heights (Hz or Hg) is 6½” (3½” for 44’s).
- The L dimension may vary depending on the width of the side strap (Wx or Wy).
- Column caps may be ordered without the column straps for field welding to a column. No loads apply. Specify CCCCLQ/CCCLQ/ECCL.

**Ordering Examples:**
- A CCCQ56 with Wx = 5¼”, Hz and Hg = 6½” is a CCSQ column cap with 5½” beams on each side with all beam seats flush.
- An ECCLR66 with Wx = 3½”, Hz = 7½” is an ECCL end column cap with a 4x beam on the right side (specify direction left (which is shown) or right for slippage) and slippage seat 1” below the cap seat.

### Comparison Table

</tbody>
</table>

1. Uplift loads have been increased for wind or seismic; reduce where other loads govern.
2. Allowable load is per seat. Side beams must be loaded symmetrically for the CCCQ.
3. The combined uplift loads applied to all beams in the connector must not exceed the total allowable uplift load listed in the table.
4. The ECQLQ side beam may use a side beam uplift load up to 2350 lbs. The deflection of this load may exceed the standard 1/16” deflection by an additional 1/8”.
5. The combined download for all of the carried beams shall not exceed the allowable download for the unmodified product on page 63 (CCQ load for CCCQ and CCTQ, or ECQL load for ECQLQ). The download for each side beam shall not exceed the lesser of 35% of the allowable download or 905 lbs. for the unmodified product.
6. The download to each side beam shall not exceed the allowable load shown, nor 35% of the allowable load for the unmodified product, whichever is lower.
7. Column width in the direction of the beam width must be the same as the main beam width (Wy).

</table>

a. No increase permitted for repetitive member use factor.
b. Tabulated values for maximum moment, shear, and reactions are for normal load duration and may be increased for other load durations in accordance with applicable building codes.
c. Tabulated maximum reactions are without bearing stiffeners. For maximum reactions with bearing stiffeners or with other bearing lengths, visit www.buildonCENTER.com.
d. For the maximum end reaction with an end bearing length of 4", use the tabulated maximum shear value. Maximum reactions for end bearing lengths between 1 1/4" and 4" may be determined by interpolation. Bearing stiffeners are required for end reactions exceeding 1550 lbs.

Approximate Deflection (inches) = \( \frac{22.5wL^4}{EI} \)

w = uniform load (plf)
L = span (feet)
EI = stiffness constant (in^3-lbs)
d = joist depth (inches)

</table>

a. Allowable design stresses apply to depths as small as 3 1/2” ripped from any depth of beam.
b. No increase is allowed to E, G or F<sub>c</sub> for duration of load.
c. A factor of 1.04 may be applied for repetitive members as defined in the 2005 NDS.
d. For depth (d) of 12”. For 3.5” ≤ d < 12”, multiply F<sub>f</sub> by (12/d)^0.1361. For d > 12”, multiply F<sub>f</sub> by (12/d)^0.2.
e. For depth (d) of 12”. For 3.5” ≤ d < 12”, multiply F<sub>c</sub> by (12/d)^0.154. For d > 12”, multiply F<sub>c</sub> by (12/d)^0.2.
f. F<sub>t</sub> has been adjusted for a length effect suitable for most common applications.
g. For calculating lateral load capacity of bolts, lag screws, nails, and wood screws in the wide face. For nails and wood screws in the wide face of 1.9E onCENTER LVL, use 0.50.

Revised 8/1/2002
**USE & CARE**

Before selecting the surface material, consider the type of use it will receive, as well as its texture, color, and reflective value. A rough-textured surface has different advantages, depending upon use, than a smooth-textured surface. High gloss finishes (laminates for example) are not recommended for use in heavy-duty applications such as countertops.

**SCRATCH AND IMPACT PROTECTION:** Laminate by Formica is resistant to scratches and impacts under normal use conditions. Use cutting boards, chopping blocks, or other protective surfaces.

- A: Do not chop, slice, pound, or hammer on any laminate surface.
- B: Knives or other sharp utensils may nick or scratch the surface.
- C: Heavy blows from a hammer or nail set or hammer may cause or gouge this surface.
- D: Use place mats, cloths, and trays on laminate surfaces when necessary.

Ceramics and abrasive objects can cause scratching and premature wear — do not slide these items across surface.

Follow recommendations for cleaning — do not use abrasive cleaners, polishers, steel wool, sandpaper, or Scotch-Brite® scouring pads (see Cleaning section below).

**HOT OBJECTS:** Cookware still hot from the stove or oven, as well as electric soldering irons, ironing irons, and hot rollers, etc., should not be placed directly on laminate surfaces. Prolonged exposure to temperatures of 140°F (60°C) or higher may cause the laminate to separate from the core material. Avoid roasting or placing a hot iron on laminate surfaces. Do not place lighted cigarettes directly on laminate surfaces.

Use a cloth, mitted hot pad or other protective device beneath all hot cookware, heat generating appliances, or other heated objects. Laminate by Formica can withstand heat up to 275°F (136°C) for short periods of time.

**ORDINARY CLEANING:** Laminate by Formica is very easy to clean.

A: In most cases, you only need to use a clean, damp, non-abrasive cotton cloth and a mild liquid detergent or household cleaner.

B: Rinse with clean water, using a clean, non-abrasive cotton cloth.

C: Do not flood the laminate, especially rear areas, since water can penetrate and cause the substrate to swell.

D: Dry the surface with a soft, clean, non-abrasive cotton cloth.

**CLEANING SPECIFIC FINISH TYPES:** For specific types of surfaces, use the following care guidelines. Sculptured and Dimensional Finish Laminate: These surfaces may require special attention to clean the depressed areas. Use a soft, clean, non-abrasive cloth cloth along with a mild liquid detergent and water solution or household cleaner. Clean the soiled area, using a rubbing motion. Rinse and dry the surface immediately.

**CHEMICAL DAMAGE:** Never use cleaners containing acid, alkal, or sodium hypochlorite. These cleaners will mar, discolor, and permanently damage the laminate surface. Always make sure that bottles, sags, and other materials contaminated with these cleaners never contact the laminate surface. Examples of cleaners containing acid, chloride, or sodium hypochlorite include, but are not limited to: drain cleaners, rust removers, etchproof cleaners, metal cleaners, tub and tile cleaners, enamel bleach, oven cleaners, toilet bowl cleaners, lime scale removers, ceramic cooktop cleaners, some disinfectants and some countertop cleaners.
VERSASHIELD
UNDERLAYMENT
Fire Resistant Roof Deck Protection

Property Owner’s Best Choice
• Superior Protection… The best protection against fire spread and penetration.
• Looks Better… Fiberglass reinforced, so it lays flatter for a better-looking roof.
• Peace Of Mind… 20 year limited warranty against manufacturing defects.

Professional’s Best Choice
• Increased Productivity… Fire resistant slip sheet AND roof deck protection in one roll.
• Convenient… Will upgrade the UL fire classification of almost any type of roof.*
• Safer For Installers… Slip resistant walking surface improves traction on steep slopes.
• Easier To Use… Light color provides a cooler working surface.
• Flexibility… Helps provide temporary moisture resistance; can be left exposed for up to 60 days if necessary.

Specifications (nom.)
• 3.5 squares (350 gross square feet or 32.5m² per roll)
• 42” (1.07m) wide, 100 ft. (30.48m) long
• 52.5 lbs. per roll
• Meets or exceeds ASTM D146, D226 Type II, D828, D4869 Type IV, D6757 Type I or Type II
• UL Listed
• Dade County Product Approval
• Florida Building Code Approval
• LA City: RR25424
• ICC ESR-2053
• ICC AC-160

*Please refer to Underwriters laboratories Certifications Directory for actual assemblies.

M27 bioPCmat™ Specifications

**Width:** 16.5 inches (.42m)

**Length:** 48 inches (1.22m) or 96 inches (2.44m)

This product is stocked in 16.5 inch width material, and is available in two different lengths as a stock item. You can get it in 4 ft, 48 inch and 8 ft, 96 inch lengths depending on the final usage of the product. It is also available in non-permeable and permeable configurations. Please note that this product can be ordered in a wide variety of temperatures to meet your specific needs. It is stocked in 23C, 25C, 27C and 28C options; it is also possible to manufacture other temperature products to meet custom demand. Feel free to contact us to discuss your product needs.

**CUSTOM ORDER SIZES available by special order:**

We can manufacture this product in custom sizes should that be deemed necessary. Pricing for custom product will vary depending on the exact specifications and will be quoted per your request. Lead times will vary depending on work flow and availability of raw materials at the time of purchase. Call us today to request a quote on your custom product.

Typical Phase Change Applications in Building Environments

Trombe Wall Application
Taking advantage of the normal tracking of the sun is becoming all the more necessary as we look for ways to reduce our carbon footprint. Placing phase change material in trombe walls which are exposed to the sun at critical times during day allows you to take full advantage of the transition of the phase change to decrease the heating load of the structure.

Drop Ceiling Application
Placing Bispcm™ into the ceiling cavity of a structure whether new or retrofit, is one of the easiest, most cost effective applications of phase change possible. In numerous studies of actual structures, we consistently see significant savings on HVAC expenditures. These savings are repeatable year-over-year for many years which equates to huge savings over the life of the product.

AIR-SHIELD® LMP

DESCRIPTION
AIR-SHIELD LMP is a water-based air/liquid moisture barrier that cures to form a tough, seamless, elastomeric membrane. AIR-SHIELD LMP exhibits excellent resistance to air leakage. When properly applied as a drainage plane, AIR-SHIELD LMP prohibits liquid water intrusion into the substrate.

USES
AIR-SHIELD LMP has been specifically formulated to act as an air and liquid moisture barrier, allowing vapor to pass through it. It may be applied to most common surfaces and integrated into various wall systems. AIR-SHIELD LMP is suitable for both new construction and retrofit applications.

FEATURES/BENEFITS
- High permeability - allows the transmission of moisture vapor through porous building materials.
- Highly flexible - bridges cracks, which may form in the substrate.
- UV resistant – gray membrane can be left exposed up to six months. Black membrane can be exposed for an indefinite period and is ideal for exposed applications, such as beneath rain screen panels.
- User friendly – single-component, water-based technology allows for simple, safe application and easy cleanup.
- Liquid applied - simplifies detailing and assures a monolithic, seamless membrane when applied to a rough or smooth surface.
- Sprayable - with appropriately configured airless spray equipment - low application costs.
- Excellent adhesion - remains firmly bonded to the substrate, even when applied over damp surfaces.
- Self-sealing – Nails and fasteners can be used without compromising performance.
- Low VOC content – <100 g/L.

PACKAGING
5 Gallon (18.93 Liter) Pails
55 Gallon (208.20 Liter) Drums

SPECIFICATIONS
- Exceeds Air Barrier Association of America (ABAA) Section 07263 Liquid-Applied Vapor Permeable Air Barrier System.
- Exceeds ABAA maximum assembly air leakage requirements when tested in accordance with ASTM E 2357.
- Exceeds the requirements of the Massachusetts Commercial Energy Code for Building Envelope Systems.
- 2005 National Building Code of Canada
- Complies with all current federal, state, and local maximum allowable VOC requirements, including U.S. EPA, LADCO, SCAQMD, and OTC.
- Complies with Canada VOC Concentration Limits for Architectural Coatings Regulations.

LEED INFORMATION
May help contribute to LEED credits:
- EA Credit 1: Optimize Energy Performance
- IEQ Credit 3.1: Construction IAQ Management Plan: During Construction
- IEQ Credit 4.2: Low-Emitting Materials: Paints & Coatings
- IEQ Credit 7.1: Thermal Comfort - Design
- MR Credit 2: Construction Waste Management
- MR Credit 5: Regional Materials

APPLICATION
Surface Preparation … All surfaces must be clean (free of all coatings and curing compounds), free of frost, structurally sound and relatively smooth. AIR-SHIELD LMP can be applied to “green” or damp concrete if there is no liquid water on the surface. Prepare substrate per manufacturer’s instruction prior to membrane application.

Exterior Sheathing Panels … Exterior sheathing panels are to be installed and fastened per manufacturer’s recommendation. Joints <1/4” should be filled with AIR-SHIELD JOINT FILLER in order for the material to create a continuous film when applied. Joints >1/4” in exterior sheathing panels (drywall and glass-faced) should be filled with AIR-SHIELD JOINT FILLER and then covered with 3” (76.2 mm) wide REINFORCING FABRIC HCR from W. R. MEADOWS. For optimum performance, REINFORCING FABRIC HCR and AIR-SHIELD JOINT FILLER should be utilized on all joints. For plywood and oriented strand board (OSB), use AIR-SHIELD self-adhesive membrane over all joints.

Details and Protrusions … Before application of AIR-SHIELD LMP, apply a 6” (152 mm) minimum wide strip (lapped 3” on each side) of AIR-SHIELD where joints between dissimilar building materials occur, i.e. details around doors and windows, as well as protrusions. Architectural details are available online at www.wrmeadows.com or by calling 1-800-342-5976.

Concrete Masonry Units … Before applying AIR-SHIELD LMP to CMU surfaces, patch all cracks, protrusions, small voids, offsets, details, irregularities and small deformities with MEADOW-PATCH® 5 or MEADOW-PATCH 20 at least two hours before application.

Appearance … AIR-SHIELD LMP (gray) will dry gray in color. AIR-SHIELD LMP (black) appears dark gray in the container, but the dried film will be black.

Temperature/Conditions … Apply AIR-SHIELD LMP at air and surface temperatures of 40° F and higher. Curing/drying times are dependent on air temperature, airflow, relative humidity, substrate temperature, etc., specific to each individual application. Typical results are:

Tack-Free Time: 2 hours
Full Cure: 48 hours
CSI #: 07 25 00

**PRODUCT DATA**

**AIR-SHIELD™ 25 MIL FLASHING TAPE**
Flexible Flashing, 25 Mils Thick

**DESCRIPTION**
AIR-SHIELD 25 MIL FLASHING TAPE is a self-adhering, flexible membrane flashing. It is a roll-type product that is nominally 25 mils thick. This material is an air, vapor, and liquid moisture barrier. When properly applied, the product reduces the risk of rot and mold development.

**USES**
AIR-SHIELD 25 MIL FLASHING TAPE provides protection against water infiltration in critical detail areas, such as window and door openings, deck-to-wall intersections, corner boards, wall-to-wall tie-ins, foundation sill plates, sheathing panel seams, under stucco finishes, masonry walls, and other non-roof detail areas.

**FEATURES/BENEFITS**
- Easy to install.
- Reduces the risk of rot and mold development.
- Superior adhesion.
- Seals around fasteners.
- Watertight.

**TECHNICAL DATA**
**Thickness** 25 mils
**Roll Sizes** Available in cut sizes
Also available in cut rolls of 4”, 6”, 9”, and 12” (102, 152, 224, 326 mm) wide. NOTE: Some sizes require lead time. All rolls are 75’ (22.9 m) long.

**APPLICATION**
**Surface Preparation** ... Apply AIR-SHIELD 25 MIL FLASHING TAPE in fair weather conditions when the air, surface and membrane are at temperatures of 25° F (-4° C) or higher. After precipitation, allow a minimum of 24 hours for drying before installation. Install directly onto a clean and dry surface. Remove dust, dirt, and loose nails. Protrusions must be removed. Surfaces should have no voids or damaged/unsupported areas. Repair surfaces before installing. Surfaces should be free of scale, rust, grease, and oil and conditioned with MEL-PRIME™ or MEL-PRIME W/B from W. R. MEADOWS.

**Application Method** ... Cut AIR-SHIELD 25 MIL FLASHING TAPE to desired length. Peel back the release paper to expose adhesive. Align the membrane and press into place with heavy hand pressure. Laps must be a minimum of 3” (75 mm). Mechanically fasten the membrane at all vertical terminations. Use only smooth shank fasteners. Consistent with good construction practice, install the membrane so that all laps shed water (following the shingle principle). The top membrane layer should go over the bottom layer. Always work from low point to high point.

**PRECAUTIONS**
Do not leave the product permanently exposed to sunlight. Maximum recommended exposure time is 30 days.
GRACE ICE & WATER SHIELD®
Self-adhered roofing underlayment

Product Description
Grace Ice & Water Shield® is a premier membrane composed of two waterproofing materials—an aggressive rubberized asphalt adhesive backed by a layer of high density cross laminated polyethylene. The rubberized asphalt surface is backed with a foldless release paper that protects its adhesive quality. During application, the release paper is easily removed, allowing the rubberized asphalt to bond tightly to the roof deck. In addition, embedded in the membrane is a split release on demand feature called Ripcord®.

The membrane is supplied in two roll sizes. See the Product Data chart for product information. Membrane strips are also available in 75 ft (22.9 m) long rolls at widths of 6 in. (150 mm), 9 in. (225 mm), 12 in. (300 mm) and 18 in. (450 mm).

Features & Benefits
Easy to handle and apply—The self-adhesive membrane bonds firmly to the roof deck without heat or special adhesives. Ripcord is a unique, patented feature that makes Grace Ice & Water Shield easier to apply by giving the applicator a split release on demand. Faster application of the membrane in the straight-aways, as well as ease of membrane positioning in detailed areas (valleys, around dormers, etc.), are just some of the benefits.

Foldless release paper—The foldless release paper provides multiple performance enhancements: fewer edge catches, 180° pull-back, ease of membrane cutting (single cuts) and membrane positioning, quicker “one-man installs” resulting in an easier, more productive release.

Seals around nails—The rubberized asphalt layer in Grace Ice & Water Shield seals around roofing nails, resisting leakage caused by water back-up behind ice dams, or from wind-driven rain.

Dual barrier protection—Rubberized asphalt and polyethylene are combined to form two waterproofing barriers providing maximum protection.

Membrane will not crack, dry out or rot—Grace Ice & Water Shield resists attacks from fungus and bacteria; maintains its integrity for long lasting protection.

Protects under all standard sloped roof coverings—Grace Ice & Water Shield protects under slate, tile, cedar shakes or metal, as well as under conventional asphalt shingles.

Slip resistant surface—Grace Ice & Water Shield has a slip resistant embossed surface to maximize traction and safety for applicators.

Proven track record—Grace Ice & Water Shield is the name brand in roofing underlayments with a 30-year track record of protecting roofs from ice dams and wind-driven rain.

Reroofable—Unlike some granular surfaced membranes, Grace Ice & Water Shield will not adhere to the underside of the exposed roof covering. Grace Ice & Water Shield can be applied over the old Grace underlayment (except over Grace Basik® except over Grace Basik®, Grace Tri-Flex® and Grace Tri-Flex®Xtreme®). in retrofit applications, making reroofing easier, less costly (since there is no need for removing the existing underlayment), more durable and environmentally friendly (as the structural deck remains intact avoiding the need to purchase additional wood decking).

Grace technical support—Grace Ice & Water Shield is backed by a team of local technical support personnel that help ensure every application goes smoothly.
Guidelines for Use
Grace Ice & Water Shield is used as an underlayment for sloped roofs to resist water penetration due to water back-up behind ice dams or wind-driven rain. Grace Ice & Water Shield also offers leak protection in trouble prone spots like valleys, skylights, protrusions and other flashing areas.

Ice Dams
Grace Ice & Water Shield should be used in conjunction with designs which minimize ice dam formation. In cold climates, it is particularly important to provide proper insulation and ventilation to reduce the size of ice dams and to avoid interior condensation. Cathedral ceilings must include ventilation between rafters to allow for air flow to a ridge vent. Well ventilated cold roof designs are particularly important in alpine regions to reduce the size of ice dams which could contribute to structural damage.

Several variables will influence the height of ice dams and the membrane coverage required.

1. Climate—The annual snow fall will affect the amount of membrane needed.
2. Slope—On a low slope, ice dams will extend farther inward from the roof edge.
3. Overhang—A wide overhang will require more membrane to reach the appropriate point on the roof.
4. Insulation and ventilation—A very well insulated building with a cold, well ventilated attic will have smaller ice dams.
5. Valleys—Any valleys formed by projections such as dormers or roof direction changes are likely to trap more snow and cause larger ice dams.
6. Exposure—A northern exposure or shaded areas will generally contribute to larger ice dams. While gutters may make it easier for an ice dam to start, large dams can occur on roofs with no gutters. Removing snow from a roof edge or installing heat cables may not prevent ice dam formation, but may shift the location of the ice dam. Under certain conditions, a dam can form at the edge of the remaining snow.

Local building codes should be consulted for specific requirements.

Installation Procedure
Surface Preparation
Install Grace Ice & Water Shield directly on a clean, dry, continuous structural deck. Some suitable deck materials include plywood, wood composition, wood plank, metal, concrete, or gypsum sheathing. Remove dust, dirt, loose nails, and old roofing materials. Protrusions from the deck area must be removed. Decks shall have no voids, damaged, or unsupported areas. Wood planks should be closely butted together. Repair deck areas before installing the membrane.

Prime concrete, masonry surfaces and DensGlass Gold® with Perm-A-Barrier® WB Primer. Prime wood composition and gypsum sheathing with Perm-A-Barrier WB Primer if adhesion is found to be marginal (refer to Technical Letter 12, Use on Oriented Strand Board (OSB) Roof Sheathing). Apply Perm-A-Barrier WB Primer at a rate of 250–350 ft²/gal (6-8 m²/L). Priming is not required for other suitable surfaces provided that they are clean and dry.

Membrane Installation
Apply Grace Ice & Water Shield in fair weather when the air, roof deck, and membrane are at temperatures of 40°F (5°C) or higher. Apply roof covering material at temperatures of 40°F (5°C) or higher.

Cut the membrane into 10–15 ft (3–5 m) lengths and reroll loosely. Peel back 1–2 ft (300–600 mm) of release liner, align the membrane, and continue to peel the release liner from the membrane. Press the membrane in place with heavy hand pressure. Side laps must be a minimum of 3.5 in. (90 mm) and end laps a minimum of 6 in. (150 mm). For valley and ridge application, peel the release liner, center the sheet over the valley or ridge, drape, and press it in place. Work from the center of the valley or ridge outward in each direction and start at the low point and work up the roof. Alternatively, starting with a full roll of membrane, unroll a 3–6 ft (1–2 m) piece of membrane leaving the release liner in place. Align the membrane and roll in the intended direction of membrane application. Carefully cut the release liner on top of the roll in the cross direction being careful not to cut the membrane. Peel back about 6 in. (150 mm) of the release liner in the opposite direction of the intended membrane application exposing the black adhesive. Hold the release liner with one hand and pull the roll along the deck with the release liner, leaving the applied membrane behind. Use the other hand to apply pressure on the top of the roll. Stop frequently to press the membrane in place with heavy hand pressure. When finished with the roll go back to the beginning, reroll and pull the remaining release paper from the material, finishing the installation.

For successive membrane courses, align the edge of the release liner with the dashed line provided on the surface of the membrane to achieve the 3.5 in. (90 mm) side lap. Consistent with good roofing practice, install the membrane such that all laps shed water. Always work from the low point to the high point of the roof. Apply the membrane in valleys before the membrane is applied to the eaves. Following placement along the eaves, continue application of the membrane up the roof. The membrane may be installed either vertically or horizontally.

Use smooth shank, electro-plated galvanized nails for fastening shingles to get the best seal. Hand nailing generally provides a better seal than power-activated nailing. If nailing of the membrane is necessary on steep slopes...
Meet energy standards with Duration® Premium Cool shingles

- Help reduce environmental impact by keeping roofs cool—less energy needed to cool a home means less energy consumption.
- Extend the life of the roof—thanks to solar-reflecting granules that reduce shingle temperature and subsequently slow asphalt aging.
- Include a Limited Lifetime Warranty and 130-MPH Wind Resistance Limited Warranty.
- Backed by an Algae Resistance Limited Warranty.
- Meet 2009 California Title 24, Part 6, requirements which call for a Cool Roof or equivalent improvement. For more information, visit www.roofing.owenscorning.com.
- Are rated by the Cool Roof Rating Council (CRRC).

Provide greater bonding strength

As part of the Duration Series shingle line, Duration Premium Cool shingles also come with SureNail® Technology, offering:

- **SURENAIL WIDER NAILING AREA** • New, wider nailing area allows for an improved and consistent installation.

**EXTRA ADHESIVE POWER**

- Extra wide adhesive bands help keep shingle layers laminated together in virtually all weather conditions.

**SUPERSEALING ACTION**

- Our Tru-Bond™ sealant grips tightly to the nailing strip below for greater bonding strength.

Offer a new color palette

Duration Premium Cool shingles feature unique lighter colors—that correspond with Owens Corning™ Hip & Ridge shingles—and have a three-dimensional look for maximum curb appeal.

- **Harbor Fog**
- **Frosted Oak**
- **Sunrise**
- **Sage**

*See actual warranty for complete details, limitations and requirements.

**Estimated roof surface temperature reduction based on 1998 NIST study, Analytical Study of Residential Buildings with Reflective Roofs. A temperature reduction is representative of a change from a typical roof to a Cool Roof (solar reflectance 10 to 25) in most climates.

† Owens Corning strives to accurately reproduce photographs of shingles. Due to manufacturing variances, the limitations of the printing process and the variations in natural lighting, actual shingle colors and granule blends may vary from the photo. The pitch of your roof can also impact how a shingle looks on your home. We suggest that you view a roofing display or several shingles to get a better idea of the actual color. To accurately judge your shingle and color choice, we recommend that you view it on an actual roof with a pitch similar to your own roof prior to making your final selection. Color availability subject to change without notice. Ask your professional roofing contractor for samples of colors available in your area.

†† Tru-Bond is a proprietary premium weathering grade asphalt sealant that is blended by Owens Corning Roofing & Asphalt, LLC.
**Minerit HD**

Minerit HD is suitable for interior applications, has a smooth, cement gray surface that requires no surface or edge treatment. Can be stained or painted.

Applications: Exterior cladding, agricultural buildings, balconies, stairways, sports centers, production facilities.

**Minerit LW**

Minerit LW is suitable for interior applications, has excellent sound insulation, and is shock and wear resistant.

Building Material emissions class M1.

Applications: Schools, hospitals, day care centers, nursing homes, public office buildings, hotels, ceilings, fire barriers/doors.

Fasteners must never be positioned closer than 1/2" from the edge, or 3" from the corner of a panel.

Use stainless steel screws with 3/8" diameter washer head. Holes must be predrilled into sheet with clearance around screw threads.
Technical Information Sheet

RubberCover™ EPDM membrane

1. Description
The Firestone RubberCover™ EPDM membrane is a 100% cured single-ply roofing membrane made of a synthetic rubber Ethylene-Propylene-Diene Terpolymer.

2. Preparation
Substrates need to be clean, smooth, dry and free of sharp edges, loose or foreign materials, oil, grease and other materials that may damage the membrane. All surface voids greater than 5 mm wide shall be properly filled with an acceptable fill material.

3. Application
Allow the membrane to relax for approximately 30 minutes before adhering it to the substrate. Install the RubberCover™ EPDM membrane in accordance with the installation instructions and details.

4. Coverage
The dimensions of the membrane are calculated to cover the substrate and possible upstands. Provide an additional length (150 mm) at upstands for easy manipulation.

5. Characteristics

Physical
- Elastomeric membrane with a good combination of high elasticity and tensile strength.
- Excellent resistance to U.V. and ozone.
- Retains its flexibility at low temperature (-45°C).
- Resists to temperature shocks up to 250°C.
- Excellent resistance to alkali rains.
- Less resistant to oil products. Contact with mineral and vegetable oils, petroleum based products, hot bitumen and grease must be avoided.

Storage: Store away from sources of punctures and physical damage. Store away from ignition sources and open flame.

Shelf Life: Unlimited.
Hydrotech MM6125

Hot-Melt Structural Waterproofing - Green Roof

When to Specify

The Hydrotech Monolithic Membrane 6125 inverted green roof system offers the benefit of a lifetime insulated waterproofing solution for concrete structures, supporting a range of soft landscapes and with the additional benefit of being certificated for use at zero falls, and the associated time, weight and cost savings.

Key Features

Lifespan

Hydrotech MM6125 is approved by the British Board of Agrément, who state “...when fully protected and subjected to normal service conditions, Hydrotech will provide an effective barrier to the transmission of liquid water and water vapour for the design life of the structure/roof in which it is incorporated”.

Durability

Applied in a liquid state to the deck, and including a polyester reinforcement, the bond of Hydrotech MM6125 is 100% absolute. There is no risk whatsoever of water tracking below the membrane and, because it is monolithic, no possibility of lap failure.

Performance

Hydrotech MM6125, the original hot-melt, rubberised bitumen membrane, is designed to last for the lifetime of the building or structure to which it is applied, which means long-term waterproofing integrity and no future replacement costs. Hydrotech root barriers conform to EN 13948.

Quality

Hydrotech MM6125 is the only 6mm hot melt rubberised bitumen waterproofing system to hold European Technical Approval (05/0152), which confirms compliance with the EC Construction Products Directive, in addition to BBA Certification and FM approval.

Environment

Hydrotech MM6125 hot melt roofing and structural waterproofing is manufactured utilising hydro-electric power as a primary energy source, and manufacturing procedures are independently audited to the BS EN ISO 9001:2008 Quality Management System. Importing materials under Alumasc’s ISO 14001:2004 Environmental Management System ensures that upstream production processes are monitored for their environmental impact, and that due consideration is taken for all aspects of packaging, transport and disposal, in order to deliver as sustainable a construction product as practicable.

Green Roofs

Green roofs bring many additional benefits including water retention, localised temperature reduction, recreational space, and natural habitat for flora and fauna.

Warranties

Alumasc offers a comprehensive range of warranty options. The typical warranty period for Hydrotech MM6125 is 20 years. Installed exclusively by Hydrotech Approved Contractors and underpinned by Alumasc’s extensive project support service, Alumasc warranties cover both product and installation. Independent insurance backed latent product defect warranties are also available through FSA licensed brokers.
Hydrotech MM6125

Hot-Melt Structural Waterproofing - Green Roof

Application
1. Surfaces must be cleaned of all contaminants such as unapproved curing compounds, form release agents, oils, dirt, laitance etc. Alumasc Bitumen Primer is spray applied to the cleaned surface and left to thoroughly dry.
2. Regular bond tests must be executed to ascertain the suitability of the concrete substrate to accept the membrane. The concrete must be wood float finished, or similar, and cured for at least 14, but preferably, 28 days.
3. Before Hydrotech MM6125 can be applied, whether for forming detail work or applying to the main horizontal roof areas, the material must first be melted and heated to the required temperature and mixed to develop its full physical properties. The rubber content of the membrane makes it necessary to use indirect heat, as obtained with an oil or air type double jacketed melter.
4. Upstand details are completed first, before the waterproof membrane is applied to the main horizontal roof area. Flex-Flash UN (uncured neoprene) is used as reinforcement where minor movement in detail work is anticipated.
5. The first coat of Hydrotech MM6125 is applied to a nominal thickness of 3mm.
6. Flex-Flash F fabric reinforcement is embedded whilst the Hydrotech remains warm and tacky.
7. A second coat of Hydrotech MM6125 is applied, also to a nominal thickness of 3mm, fully encapsulating the fabric reinforcement within the membrane.
8. A protecting root barrier of Hydrogard 40MN is laid over the completed Hydrotech membrane.
9. On completion, the integrity of the waterproofing must be tested by means of a WITA affiliated electronic detector system to prove that the waterproofing is 100% free from punctures and defects. The issue of the Hydrotech MM6125 warranty is conditional upon the provision of a leak test certificate.
10. The waterproofing system is then covered with the specified extruded polystyrene inverted insulation (thickness calculated to meet the required thermal value), separator sheet, drainage layer, filter sheet, growing medium and vegetation, of sufficient weight to resist wind uplift and flotation.

NB: Hydrotech structural waterproofing systems are exclusively installed by a nationwide network of Hydrotech Approved Contractors.

System Components
- The build-up of drainage layer, filter sheet and growing medium is specified to support soft landscapes such as the intensive type depicted (i.e. roof garden), and also extensive (e.g. sedum, rockery, alpine), biodiverse, and semi-intensive variants.
- The Alumasc polystyrene separator reduces the cooling effect of rainwater on the insulation below, and therefore reduces the thickness of insulation required to meet the target thermal value.
- Alumasc Extruded Polystyrene provides not only high-performance thermal insulation, but also protection from mechanical damage and UV degradation, further enhancing the membrane’s lifespan.
- Hydrogard 40MN root barrier/protection sheet gives a high level of protection to the Hydrotech membrane, and allows immediate access to waterproofed areas.
- Hydrotech MM6125 is a seamless, self-healing, monolithic membrane, made from 100% solids, providing waterproofing integrity for the lifetime of the structure in which it is incorporated.

Technical Support
Alumasc Technical Services provide an extensive project support service that includes site surveys, project specifications, performance calculations (e.g. U-values, condensation risk analysis), CAD detail drawings and general technical advice.

## Reverse Half Round Single Bead Aluminum Gutter

Capture the craftsmanship of more traditional times with our superior product of today. The reverse bead enables the use of a Half Round Hidden Hanger for a sophisticated, clean look.

Our reverse half round bead gutter will work with all other 6" Half Round Hangers as well.

### Customize Your Order!
We can ship any length up to 20 feet (10 foot minimum order per size and color). More info on Reverse Half Round Single Bead Aluminum Gutter...

Features and Options

Standard Features:
• 18 gauge face sheets, 16 gauge optional
• 16 gauge inverted end channels welded to both face sheets for added strength.
• 14 gauge closer reinforcement

Available Sizes:
• 4’0” x 8’0” maximum single, 8’0” x 8’0” maximum pair

Material:
• Cold rolled or galvanneal steel

Core:
• 22 gauge steel stiffeners spaced every 6” apart with injected polyurethane foam

Edge Construction:
• Mechanically interlocked, hemmed vertical edge seams
• Seamless edges available

Hardware Reinforcements:
• Reinforcing for most lock preps, including concealed hardware
• 7 gauge steel hinge reinforcements

Paint:
• Electrostatically applied prime base coat
• Optional Colorstyle factory pre-finish

Performance
• Thermal Insulation: Fully operable U-Factor 0.34, R-Value 2.9 (ASTM C1363). For test data regarding ASTM C518 and ASTM E 283, please refer to our website under Energy Efficiency.
• Physical endurance testing: Meets ANSI A250.4 performance test, level A (1,000,000 cycles) class 1 stiffness
• Fire rating: Up to and including 90 minutes 4’0” x 8’0” singles only (UL10C) UL & WH agencies

According to data from the Spray Polyurethane Foam Alliance, doors represent 11% of the overall leakage in a building. When the Trio-E from Ceco is combined with thermally broken frames and thresholds, it becomes a sustainable building solution that can eliminate infiltration and exfiltration in the door opening and guarantee that the building envelope is tightly sealed, even in the harshest environment.

Footnotes:
- Data based on 1-3/4” x 3’ 0” x 7’ 0” door
- MR credits 5.1/5.2 are applicable to project sites that are within 500 miles of Mason City, Iowa and Mankato, Minnesota. Projects in Arkansas, Colorado, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, Oklahoma, South Dakota, and Wisconsin may be eligible.
- In order to meet Chain of Custody requirements set forth by the USGBC, your company may be required to obtain FSC certification.
- 87% of the wood in our agrifiber core door is FSC certified; wood makes up 21% of the door which results in a contribution to MR Credit 7 of 18%.
- 82% of the wood in our mineral core door is FSC certified; wood makes up 15% of the door which results in a contribution to MR Credit 7 of 12%.
- Doors must be specified as no added urea-formaldehyde to meet EQ Credit 4.
- Information provided as per LEED-NC 2.2 rating system, although most of the information applies directly to other LEED rating systems as well.
NanaWall® SL60
The Standard Thermally Broken Aluminum Framed Folding System

The SL60 is a thermally broken, aluminum folding panel system designed to provide an opening glass wall for openings up to 39 feet wide. It is appropriate for mostly residential applications where high levels of resistance to air and water infiltration are desired.

For benefits of all NanaWall® systems, see the “General Introduction” section. For features common to aluminum folding systems, see the “Aluminum Folding Systems” Introduction.

High Weather Resistance
The system is engineered to provide high weather resistance and structural performance. The inward-opening unit with raised sill tested to AAMA HGD- LC45 915x2600 with no water entry, even at 15 psf. See the “Performance and Testing Results” section for more details.

NFRC-Approved Thermal Performance / Energy Star
The SL60 has been rated, certified and labeled in accordance with NFRC 100 and 200; see the “Performance and Testing Results” section for more details.

Florida Approval
The SL60 system is Florida statewide approved with Product Approval number FL 8349. This information with limitations can be viewed at http://www.floridabuilding.org.

Acoustical Performance
The SL60 system has been tested by an independent acoustic lab for acoustical performance. The SL60 with raised sill and STC 38 laminated glass achieved STC and Rw values of 38.

Superior Thermal Break
The system is thermally broken with a wide polyamide plastic reinforced with glass fibers. This thermal barrier provides increased strength, superior humidity control, improved acoustics, and energy savings.

Top-Hung or Floor-Mounted
On the top-hung SL60a, the main weight is carried by the head track. On the floor-mounted SL60b, the lower running carriages ride on top of the sill track. Variable interlocking profiles minimize expansion problems.

Especially for High Rises: Easy Cleaning Feature
For balcony applications, there is an easy hinge removal option, facilitating glass cleaning from the inside.

Dual Color Option
The option of different finishes on the inside and outside is available; see the “Color Selection” section in General Introduction.

Hardware Options
For the main entry panel, several locking options are available. The profile locking cylinder (if any) on the main entry panel is Schlage-compatible.
**Technical Description**

The SL60 is a thermally broken aluminum folding panel system designed to provide an opening glass wall or storefront for openings up to 30’ wide; see Maximum Size Chart. It is available in various configurations utilizing one to twelve panels; see elevation drawings. The option exists for swing entry/exit panel(s); note the further panel size constraints with a swing panel not hinged to a side jamb. Units can be either inward-opening or outward-opening; see details in section drawings. The SL60/6 system is the top-hung system and the SL60/u system is the floor-mounted system.

**Frame and Panels**

The nominal extruded aluminum frame and panel thickness is 2 3/8” (60 mm), thermally broken with a wide polycarbonate plastic; see section drawings. In addition to the choices from the NanaWall Powder Coating Finish Chart, the full range of RAL high gloss and matte powder coatings are available. Anodized finished are also available; see “Aluminum Finish Options” in the General Introduction. It is possible to have different finishes on the interior and exterior surfaces.

Panel stiles and rails are connected by special cast-alloy, thermally broken corner fittings that incorporate hinge components, with finish that will be closest powder coat match to finish of frame and panels. Panels are pre-assembled, and all pins and screws needed to assemble frames are provided.

Besides the more weather resistant raised sill in profile matching finish, various thermally broken aluminum flush slots (shown in section drawings) are available as an option in a clear or dark bronze anodized finish.

**Glazing**

Units can be supplied either glazed with 15/16” (24 mm) clear insulating tempered or insulating Low-E tempered glass or other high performing safety glass such as Heat Mirror, Triple Glazed, acoustic, special tint, etc., or other glass on request. See “Glazing” in the General Introduction for other glass thickness options.

**Weatherstriping**

All weather-striping (consisting of EPDM or brush seals) is provided for sealing between panels and between panel and frame; see section drawings.

**Sliding/Folding Hardware**

For sliding and folding of each pair of panels for the SL60/6 system, attached to the upper corner of the panel (as indicated on the section drawings) is an upper load-bearing running carriage. Attached as a guide to the lower corner of that panel is a lower-running carriage. The double pair, twin-tandem, upper-running carriage is constructed to insure even distribution of pressure on all four rollers. For the SL60/6 system, a floor supported, two-wheeled, lower-running carriage is attached to the lower corner of a panel, and an upper-running carriage is attached to the upper corner of that panel as a guide. Rollers have sealed bearings and are coated with toughened Polyamide to ensure quiet running and optimal resistance to extreme temperature. Hinges at the corners of each panel are provided to connect panels together and to connect panels to frames.

**Locking Hardware and Handle Options**

For each pair of folding panels (except for the pair to be opened first in a unit with no swing panels), provided is two point locking hardware consisting of top and bottom Polyamide capped locking bolts operated by a 180° turn of a flat handle on the inside only.

For a unit with a swing panel, on the primary swing panel, provided is multi-point locking consisting of lever handles on both sides, a Schlag compatible lockset, lockable latch, deadbolt and rods at the top and the bottom. After turn of key or thumb turn, depression of handles withdraws latch, lifting of handles engages rods and turn of key or thumbturn engages deadbolt and locks.

For a unit with a secondary swing panel, available are matching dummy lever handles on both sides and concealed flush bolts that operate the rods at the top and the bottom.

For a unit with no swing panel, on the folding pair to be opened first, provided is two point locking hardware consisting of top and bottom Polyamide capped locking rods operated by a 180° turn on the inside of a L-shaped handle for an inward opening unit and a flat handle for an outward opening unit. In both cases, there will be a flat handle on the outside. Lockable with a lockset. Turn of key or thumb turn operates lock. Please note that for an outward opening unit, locking from the inside will need to be with a key that may not meet egress requirements.

For a unit where locking/handles on the inside only is desired, like in window applications, on all swing panels or pair of folding panels to be opened first, provided is two point locking with a flat handle on the inside only.

**Handle finish schemes:**

Standard – Stainless steel lever, flat and L shaped handles in brushed satin or black titanium finish.

Optional – Brass lever handles in oil rubbed, satin nickel or white finish, flat handles closest powdercoat match to panel aluminum finish and nylon L shaped handles in dark brown, gray or white finish.

CRAFTSMANSHIP

The tradition of craftsmanship and commitment to quality run deep at Baldwin. Since 1946, skilled artisans have forged Baldwin Estate hardware by hand, meticulously operating forges and hand-polishing each intricate knob, lever, and handleset. We still use time-tested techniques, such as heat forging, metal plating, and hand polishing. While many hardware manufacturers use the casting technique, Baldwin uses forging to create the flawless look that...

Gold Bond® BRAND Gypsum Board Products

National Gypsum Company features a wide variety of gypsum board products and accessories including regular gypsum board, Fire-Shield fire resistant board, 1/4" High Flex Gypsum Board, 1/2" High Strength Ceiling Gypsum Board, Hi-Impact Gypsum Board, Gridstone Ceiling Boards, Gypsum Sheathing, Fire-Shield Shaftliner, Durasan Prefinished Gypsum Board, Exterior Soffit Board, and Joint Treatment products.

Our concentration isn’t on building products alone; however. At the National Gypsum Research and Testing Center, we develop complete construction systems. In such systems, products are evaluated together as complete building assemblies—walls, partitions, floors and ceilings. We have included in this section details and application instructions for many of those assemblies: Steel Frame Partitions, Steel Frame Ceilings/Turning Channels or Studs, Wood Frame Wall and Ceilings, Gypsum Board Over Foam Insulated Masonry and Solid Laminated Partitions.

Before a National Gypsum System is released to the building industry, it is thoroughly tested, and results are correlated and charted to make it easier for the builder or specifier to match a system to their needs or to the building codes.

The drywall construction systems referred to in this catalog are designed primarily with materials manufactured by National Gypsum Company. Substitution of any product or other brands in a tested system is not recommended.

Field installation of tested systems must be identical to laboratory installation to produce optimum performance of these systems. Performance tests are conducted in accordance with accepted national standards under controlled laboratory conditions to minimize variances and to permit comparison of test results with all types of systems, similar and dissimilar.

Unfinished Hardwood Flooring and Wood Paneling

White Oak

Specifications
- Thickness: 3/4" Solid Wood
- Length: Random, up to 8 feet

Features
- Our hardwood flooring and wood paneling is slowly and carefully milled to a precise fit, ensuring trouble free installation of hardwood floors.
- Our own kiln-drying facilities ensure that all lumber has been properly dried, equalized and fully conditioned for hardwood flooring and wood paneling use.
- Our hardwood flooring and wood paneling is easy to install and easy to order.

Milling Choices
- Square Edge (Plain Milling)
- Beveled Edge (V-Groove)
- Micro-bevel available in large quantity orders only

Grade Choices
We offer two grades of unfinished hardwood flooring and paneling:

Our Clear grade is free of knots, mineral streaks and wormholes. It is ideal for a formal appearance. Furniture grades of lumber (FAS) are used along with 1/COM and "Selects" to produce clear grade hardwood flooring and wood paneling with a good length average.

Character grade hardwood flooring and wood paneling is milled from 2/COM lumber. To produce a quality product, we cut out loose knots, leaving natural color variations and tight knots for a rustic appearance.

Note: Character grade generally has more short pieces mixed in with the longer planks.

Sheoga hardwood flooring offers herringbone flooring

Sheoga hardwood flooring offers herringbone flooring in a wide variety of wood species and sizes. Herringbone is precisely milled to our standards. Our double-end-grooved herringbone offers flexibility for a unique design or pattern in your home or office.
**TECHNICAL DATA SHEET**

**INTERIOR CEILING PAINT**

**NO. 558 ULTRA PURE WHITE**

**PRODUCT INFORMATION**

BEHR PREMIUM PLUS® Ceiling Paint No. 558 is a tough acrylic latex flat finish formulated to resist splatter when applied to interior textured, popcorn and acoustic style ceilings. This flat helps to hide minor surface imperfections and provides great coverage.

**RECOMMENDED USES:**

Use on properly prepared, interior ceilings including drywall, plasterboard, and cured plaster.

**PRODUCT SPECIFICATIONS:**

- **Tint Bases/Max Tint Load:**
  - No. 558 Ultra Pure White Base 128 oz / 2 oz
- **PRE-MIXED COLORS:**
  - Custom colors plus computer color matching available.
- **Sheen:** 3 at 85°
- **Vehicle Type:** 100% Acrylic
- **% Solids:**
  - By Volume: 35% at +/- 2%
  - By Weight: 52% at +/- 2%
- **VOC:** <50 (g/l), meets the requirements for LEED credits, as the product meets VOC limits as established by Green Seal Standards GS-13, First Edition, May 20, 1991.
- **Flash Point:** Not Applicable
- **Viscosity:** 102-112 KU
- **Recommended Film Thickness:**
  - Wet: 6.4 Dry: 2.2 mils @ 250 SFG
  - Wet: 4.0 Dry: 1.4 mils @ 400 SFG
- **Coverage:** 250-400 SFG, depending on application method and substrate porosity. Does not include the loss of material from spraying.

**APPLICATION:**

- **Brush:** Nylon/polyester
- **Roller:** Use 3/8"-1/2" nap cover on smooth surfaces and 1/2"-3/4" on rough, porous surfaces.
- **Airless Spray:** At packaged consistency
- **Tip:** 0.15 - 0.19" Filter: 60 mesh
- **Thinning:** (If required) No more than 1/2 pint of water per gallon.
- **Dry Time:**
  - **@ 77° & 50% RH**
    - Longer dry time may be required in cooler temperatures and higher humidity.
    - **1 To Touch:** 2 hours
    - **1 To Recut:** 4 hours
    - **Full Cure:** 2 weeks

**RECOMMENDED PRIMER / SYSTEMS:**

**PROPERLY PREPARED NEW SURFACES:**

  - BEHR PREMIUM PLUS® Interior Enamel
  - Undercoater Primer & Sealer No. 75

**PREVIOUSLY PAINTED SURFACES:**

- **BEHR PREMIUM PLUS® Interior/Exterior Oil-Based Primer & Sealer No. 434**
- **BEHR PREMIUM PLUS® Interior Enamel Undercoater Primer & Sealer No. 75**

**CAUTIONS/LIMITATIONS:**

- Protect from freezing.
- Do not use on floors.
- For best results, apply at temperatures between 50°F - 90°F. Temperatures above 90°F may affect the application such as drying to fast. Avoid painting in direct sun. NOTE: If the surface is hot to the touch it should be considered to hot to apply this coating.
- Allow two weeks before washing or cleaning for full cure.
- Shelf life under normal conditions is two years unopened.

**CLEAN UP:**

Clean all tools and equipment with clean water. For disposal of empty containers and unused product, contact your household refuse collection service.

† WARNING! If you scrape sand or remove old paint, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH-approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by contacting the National Lead Information Hotline at 1-800-424-LEAD or log on to www.epa.gov/lead. WARNING! This product contains chemicals known to the state of California to cause cancer and birth defects or other reproductive harm. WARNING! Sanding or scraping pressure treated lumber may be hazardous; wear appropriate protection.
TECHNICAL DATA SHEET

INTERIOR/EXTERIOR HI-GLOSS ENAMEL
NO. 8050 ULTRA PURE WHITE®

TRANSPARENT WATERPROOFING
WOOD FINISH
NO. 400 SERIES

This product, due to its durable waterproofing formula, lasts up to 2 years on decks and 4 years on fences and siding. The 100% acrylic formula is available in 3 transparent colors that accent wood grain. For UV protection, the product is enhanced with silicone. Cleans up easily with soap and water and is also mildew resistant.

RECOMMENDED USES:
*For wood substrates only.* Recommended for properly prepared new to slightly weathered, unsealed exterior wood surfaces (0-5 years exposure) such as: Decks, Railings, Shakes, Shingles, Siding, Roofs, Fences and Wood Patio Furniture.

PRODUCT SPECIFICATIONS:
Pre-Mixed Colors:
- 400 Natural
- 401 Cedar Naturaltone
- 402 Redwood

Vehicle Type: 100% Acrylic
Weight Per Gallon: 8.61 +/- 0.2 lbs./gal
% Solids:
- By Volume: 38.8 +/- 2%
- By Weight: 21.2 +/- 2%

VOC: <275 (g/l)
Flash Point: Not Applicable
Viscosity: 20-45 sec #2 Zahn Cup

Recommended Film Thickness:
- Wet: 5.3 Dry: 1.0 mils @ 60°F
- Wet: 2.6 Dry: 0.5 mils @ 60°F

Coverage: 500-700 ft²/gal, depending on application method and substrate porosity. Does not include the loss of material from spraying.

APPLICATION:
- MUST PREP BEFORE STAINING
- Wood surface must be completely dry prior to staining
- Intermix multiple containers to ensure color uniformity
- Avoid applying too heavily
- Temperature Range: 40-90°F (4.5-32°C)

Application methods:
- Pad applicator (for larger areas)
- Nylon/polyester brush (for areas requiring more accuracy)
- 3/8” nap roller (rough surfaces only)
- Airless sprayer with 0.015-0.019” tip

*Follow spraying immediately with back brushing or back rolling for a uniform appearance.
- Work in small sections lightly saturating the surface and immediately back-brush or use pad applicator to eliminate puddling; remove excess and evenly distribute the finish. Maintain a wet edge when applying.
- Dry Time*: 1-2 hours
- Wait 24-48 hours before light foot traffic.
- 72 hours for full cure.
- *Cool temperatures and/or high humidity will require additional drying time.
- 2 coats required (must apply second coat thinner than the first coat)
- For optimum performance, coat all six sides of wood

CAUTIONS/LIMITATIONS:
- Protect from freezing
- Do not use if rain is expected within 24 hours
- DO NOT THIN PRODUCT
- Avoid applying stain in direct sunlight or to hot surfaces
- Test product for color on a small hidden area before proceeding
- Over application of stain will lead to surface failure including peeling & cracking
- Stained surfaces may become slippery when wet.
- Shelf life under normal conditions is 2 years (unopened containers)

CLEAN UP:
Brushes and other equipment can be cleaned with warm, soapy water. For disposal of empty containers and unused product, contact your household refuse collection service.

1 WARNING! If you scrape sand or remove old paint, you may release lead dust. LEAD IS TOXIC. EXPOSURE TO LEAD DUST CAN CAUSE SERIOUS ILLNESS, SUCH AS BRAIN DAMAGE, ESPECIALLY IN CHILDREN. PREGNANT WOMEN SHOULD ALSO AVOID EXPOSURE. Wear a NIOSH-approved respirator to control lead exposure. Clean up carefully with a HEPA vacuum and a wet mop. Before you start, find out how to protect yourself and your family by contacting the National Lead Information Hotline at 1-800-424-LEAD or log on to www.epa.gov/lead. WARNING! This product contains chemicals known to the state of California to cause cancer and birth defects or other reproductive harm. WARNING! Sanding or scraping pressure treated lumber may be hazardous; wear appropriate protection.

Fully Integrated Dishwasher w/ TrueSteam™ Technology

LDF8072ST

STOP WASHING YOUR DISHES, BEFORE YOU WASH YOUR DISHES.

Don’t waste time pre-washing your dishes for the dishwasher. Let our TrueSteam™ technology do the work. Our powerful, yet gentle TrueSteam™ generator virtually eliminates the need to pre-wash dishes. It also includes our EasyRack™ Plus with a Height Adjustable 3rd Rack allowing you to change the racks around easily to fit any load. Finally, there’s a dishwasher that gets the job done.

SPECIFICATIONS
- 14 Place Settings
- 7 Cycles
- Stainless Steel Tub
- 3-Stage Filtration System
- BPA-Free Nylon Coated Tines
- ENERGY STAR Qualified

STYLISH DESIGN
- Hidden SmoothTouch™ Controls with LLL Display
- 4 SignalLight™ LED Cycle Indicator Lights
- Matching Commercial Handle

INNOVATIONS
- TrueSteam™
- Steam Power Cycle
- EasyRack™ Plus with Fully Adjustable Color-coded Tines
- Height Adjustable 3rd Rack
- One-touch Height Adjustable Upper Rack
- 45 db LoDecibel™ Quiet Operation
- Slim DirectDrive Motor
- Safety Water Overflow Detector
- 14-Hour Delay Start
- LoDecibel™ Quiet Operation
- SenseClean™ Wash System
- Variable Spray Intensities
- Dual Wash Mode
- NSF-Certified Sanitary Rinse
- Hybrid Condensing Drying System

TrueSteam™ Generator

Powerful yet gentle TrueSteam™ virtually eliminates the need to pre-wash. The built-in TrueSteam™ generator also enables gentle cleaning for fragile items (like stemware), and can be selected on other cycles for heavy-duty cleaning.

EasyRack™ Plus w/ Height Adjustable 3rd Rack

The newly-enhanced EasyRack™ Plus system provides outstanding flexibility and convenience, adjusting to just about any load of dishes to ensure optimal cleaning performance. Easy to adjust on-the-fly, this racking system can shift to handle any challenge your dishes can serve up.

The Height Adjustable 3rd Rack gives you more space to fit everything from long flatware to small espresso cups.

LoDecibel™ Operation

LG’s technological advances, like the Inverter DirectDrive motor and the advanced 3-stage filtration system, were designed with quiet in mind. At 45dB, this dishwasher is among the quietest dishwashers in its class.

Ultra Large Capacity SteamDryer™

DLEX2650_/DLGX2651_

WITNESS THE POWER OF STEAM

Convenience comes standard when you bring home this ultra-capacity SteamDryer. Enjoy innovative features like steam technology that will have you ironing much less, or SteamFresh™, a 20-minute drying cycle, that refreshes your favorite shirt in time for the big party. And, when you add ultra-large capacity to the mix, the result is a powerful duo—steam and capacity—that can make your life much easier and deliver a dryer that makes a difference.

SPECIFICATIONS

- 7.3 cu. ft. Ultra Large Capacity with Aluminized Alloy Steel Drum
- 9 Drying Programs
- 5 Temperature Settings

STYLISH DESIGN

- Upfront Electronic Control Panel with Dual LED Display and Dial-A-Cycle™
- Chrome Rimmed Glass Door
- Reversible Door
- Stackable with Matching Washer (Stacking Kit sold separately)
- Optional Matching Drawer Pedestal

INNOVATIONS

- TrueSteam™ Technology
- SteamFresh™ Cycle
- SteamSanitary™ Cycle
- Reduce Static™ Option
- EasyIron™ Option
- Sensor Dry System
- Precise Temperature Control with Variable Heat Source
- LoDecibel™ Quiet Operation
- SmartDiagnosis™
- 5 Minute Installation Check
- FlowSense™ Duct Clogging Indicator
- Wrinkle Care Option
- Anti-Bacterial Option
- Damp Dry Signal

Ultra Large Capacity

Do laundry a little less often. With 7.3 cubic feet of capacity, this dryer handles really large loads, saving you time and energy.

Steam Technology

A lot of those drying headaches can be a thing of the past. Our TrueSteam™ Technology generates real steam to reduce wrinkles and odors, and practically eliminates the need for ironing.

SteamFresh™ Cycle

Late for the party and no time to iron your favorite outfit? The SteamFresh™ Cycle refreshes and reduces wrinkles in up to five garments at a time with one 20-minute dryer cycle.

TOUGH ON STAINS. GENTLE ON FABRICS.

So long to dirt, odors, and household allergens and experience a level of clean you have never experienced before. Our steam technology powerfully penetrates fabrics for advanced cleaning, while being oh-so gentle to even your most delicate fabrics. This washer also features the Allergiene™ Cycle, which helps remove those unwanted household allergens like dust mites and pet dander. That's right...now you can take it easy – This washer has it all under control.

Steam Technology

There’s no clean like a steam clean. Our Steam Technology gently but powerfully penetrates fabrics to virtually eliminate dirt, odors and wrinkles.

ColdWash™ Technology

Now using the cold cycle on your washer doesn’t have to mean compromising. ColdWash™ Technology uses cold water and enhanced washing motions to penetrate deep into fabrics, giving you cold water savings with warm water performance.

6Motion™ Technology

Get your clothes clean and experience a smarter way to wash with our innovative 6Motion™ Technology. Each wash cycle combines up to 6 different wash motions to provide a revolutionary cleaning experience.

**INDUCTION COOKTOP**

**LCE30845**

**Cooking Performance**
- 4 Cooking Elements with Bridge
- 100% Induction Bridge Element

**Style and Design**
- Premium Stainless Steel Trim

**Convenience Features**
- SmoothTouch™ Controls
- Premium Grade Griddle Included
How Does Induction Work?
The electromagnetic energy generated by an induction coil reacts only with iron-like metals, not with ceramic surfaces. The pot absorbs the electromagnetic energy, and converts it into heat. Only the bottom of the pot is heated, which guarantees even heating, safety and energy savings.

Bridge Element with 100% Induction Cooking
In addition to being used separately, the left front and left rear elements can be joined by the bridge element to evenly heat larger pans and griddles; perfect for your pancakes and french toast. Unlike most manufacturers, LG’s induction cooktop features a bridge element that uses 100% induction, with no need for a traditional heating element.

SmoothTouch™ Controls
Activate and control the temperature setting with the touch of a finger.

Cooking Zone Layout
Accommodates all kinds of cooking needs from large pan to the supplied griddle.

Streamlined Design
Elegant ceramic glass with a premium stainless steel trim will complement any kitchen décor.

Top Mount refrigerator with factory installed ice system

**LTC20380**

**STYLE TO SPARE.**

This large capacity top-mount refrigerator with 20 cubic feet of space at 30 inches wide has a lot to offer. The built-in ice maker and sophisticated styling transforms this traditional style refrigerator into a leader in its category. Meanwhile, the electronic temperature control system helps keep your food fresh by keeping temperature and humidity levels where they need to be.

**STYLE AND DESIGN**

- 20 cu. ft.
- Premium Finishes in Stainless Steel, Smooth White, and Smooth Black Finishes
- Contoured Doors with Pocket Handles
- Premium LED Interior Lights: (Refrigerator/Freezer)

**ORGANIZATION**

- Full Width Pantry Drawer
- 2 Full Tempered Glass Shelves
- 2 Humidity Crispers
- 3 Door Bins
- 1 Dairy Bin

**PERFORMANCE**

- Factory Installed Ice Maker
- Electronic Temperature Controls
- LoDecibel™ Quiet Operation

---

**Great Space in Style**

Get the space you need in a refrigerator that’s right for your kitchen. With 20 cu. ft. of space, this top mount refrigerator offers a large capacity in its category at 30” wide.

**Fresher is Better**

Electronic Temperature Controls designed to maintain humidity and temperature levels to help keep your food fresher, longer. Digital sensors constantly monitor conditions within the refrigerator to keep things cool.

**Premium LED Light**

Bright LED panels on the rear of the refrigerator give you excellent light every time you look in the fridge. And they're not just convenient – they also save energy over traditional lighting.

LWS3010ST
Single Built-In Wall Oven

HIGHLIGHTS
Crisp Convection
Self-Cleaning
SmoothTouch™ Controls

COOKING PERFORMANCE
• 4.7 cu. ft. Oven Capacity
• Convection Bake
• Convection Roast
• Crisp Convection

STYLE AND DESIGN
• Premium Stainless Steel Finish
• Brilliant Blue Interior
• WideView™ Window

CONVENIENCE
• SmoothTouch™ Glass Controls
• Convection Conversion
• Self-Cleaning
• 5 Heavy-Duty Racks with 5 Positions
• 3D Lighting
• Broil Pan

THE SIMPLE RECIPE FOR SUCCESS
Get it right again and again with a Built-In Wall Oven that’s sure to bring out your inner chef. Enjoy the handiness of LG’s SmoothTouch™ glass controls to operate your oven with the touch of a finger. Plus, reach the ideal cooking temperature 30% faster with a Crisp Convection Oven. As you can see, no matter how you look at it, you’ll find the perfect balance between style and performance.

XOBI Spec Sheet
Island Hood

Model: XOBI36S, XOBI42S

Sizes: 36” 42” Depth: 23 5/8”

Features and Benefits:
• 600 CFM high velocity blower optimally removes Smoke, Grease and Odors
• 3 speed electronic illuminated controls
• 15 Minute delay off
• Two 50 W Halogen Lights - Provide brilliant illumination over the cooking surface
• High quality Stainless Steel with incomparable handcrafted Italian finish
• Aluminum Mesh Filters - Trap airborne smoke and grease particles. They can be easily be removed for dishwasher-safe cleaning
• Standard Chimney fits ceilings up to 9 ft tall
• Mounting Height from cooking surface 27”-32”

Duct Options and Electrical Requirements:
• 6 inch duct required
• Ductless Option for applications where no ducting is available
• AC 115v—60hz (4amp)

Options:
• Optional duct cover extension is available for ceiling heights up to 10 ft tall
  Model XOEDCBI
• Optional recirculation kit available
  Model XORFK04

DISCOVER THE BLAZEMASTER CPVC DIFFERENCE

Only BlazeMaster Fire Sprinkler Systems offer all of the following:

APPROVALS AND LISTINGS
• UL Listed for exposed open solid wood and composite wood joist basements
• Approved for extended coverage sprinkler heads
• Approved for exposed installations (see manufacturer’s installation instructions)

PRODUCT QUALITY AND PERFORMANCE
• BlazeMaster systems are made with the industry’s only fully pressure-rated CPVC compounds and achieve a higher Hydrostatic Design Basis (HDB) at elevated temperatures compared to other CPVC fire protection systems; above the industry standards, pipes meet an HDB of 1250 psi at 180°F and fittings meet an HDB of 1000 psi at 180°F

SERVICE
• World-recognized installer training program
• Unmatched technical service and problem-solving team
• FBC® System Compatible Program – the industry’s only chemical compatibility testing program

FEATURES AND BENEFITS
• Corrosion free for more than 50 years of service life, even in salt air environments
• Unable to sustain combustion with exceptional flame and smoke resistance with a flash ignition temperature of 900°F—significantly higher than most common construction materials
• Industry’s first fully pressure-rated pipe and fitting compounds per Plastic Pipe Institute® with high impact and temperature resistance
• Meet and exceed regulatory requirements, including NSF International standards for potable water safety
• Reduced installation time with safe and dependable joining systems that eliminate the need for torches or complicated heat-fusion techniques
• Lower total installation costs due to superior solvent-weld methods, lightweight material, and extensive application area Listings and approvals
• Lower life-cycle costs over metallic systems that require continual maintenance
• Universally approved for use in both stand-alone and multipurpose fire sprinkler systems, unlike PE-X, which is only approved for multipurpose systems
• Meet all the requirements of National Fire Protection Association (NFPA) 13, 13R and 13D, as well as pertinent plumbing codes
CSI #: 21 00 00

STAND-ALONE VS. MULTIPURPOSE SYSTEMS

There are two options when designing a fire sprinkler system for one- and two-family homes (NFPA 13D applications). Each option has distinct advantages that should be considered when choosing the best system for a specific application.

STAND-ALONE SYSTEMS

A fire sprinkler system is installed separately and works independently from a plumbing system in this design. This ensures the integrity of both water systems by allowing the plumbing system to be shut off independently from the fire sprinkler system, reducing risk during maintenance. Stand-alone systems are universally approved in all U.S. jurisdictions, removing any guesswork regarding code approvals.

MULTIPURPOSE SYSTEMS

In this design, BlazeMaster fire sprinkler pipe and fittings are connected to a FlowGuard Gold CPVC plumbing system. BlazeMaster and FlowGuard Gold pipe and fittings are easily joined together and can be installed by a contractor. Combination systems also frequently require less pipe than stand-alone systems, which translates to environmental benefits and potential material cost savings.

Stand-alone systems are the only option approved for multifamily residences (NFPA 13R applications) and multipurpose piping systems are not approved in all jurisdictions, so always check local code requirements before beginning installation.

1. DESCRIPTION

Viking Freedom® Residential Concealed Horizontal Sidewall Sprinkler VK480 is a small high-sensitivity solder link and lever residential sprinkler designed for installation on concealed pipe systems, where the appearance of a smooth wall is desired. The sprinkler orifice design, with a K-Factor of 4.0 (57.7 metric*), allows the sprinkler’s efficient use of available water supplies for the hydraulically designed fire-protection system. The operating element and special deflector characteristics meet the challenges of residential sprinkler standards.

The sprinkler is hidden from view by a low profile, small diameter cover plate installed flush to the wall. The cover plate is available in several decorative finishes to meet design requirements. The two-piece design allows installation and testing of the sprinkler prior to installation of the cover plate. After the system has been tested and wall finish has been applied, the push-on design of the cover plate assembly allows easy installation of the cover plate with up to 1/4” (6.4 mm) adjustment. Sprinkler VK480 is provided with a pipe guide to properly locate the sprinkler and allow the 1/4” adjustment of the cover plate.

2. LISTINGS AND APPROVALS

cULus Listed: Category VKKW (VK480)
Refer to the Approval Chart and Design Criteria on page 153c for cULus Listing requirements that must be followed.

3. TECHNICAL DATA

Specifications:
- Available since 2010.
- Minimum Operating Pressure: Refer to the Approval Chart.
- Maximum Working Pressure: 175 psi (12 bar). Factory tested hydrostatically to 500 psi (34.5 bar).
- Thread size: 1/2” (15 mm) NPT
- Nominal K-Factor: 4.0 U.S. (57.7 metric*)
* Metric K-factor measurement shown is in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.
- Available Cover Plate Horizontal Adjustment: 1/4” (6.4 mm)
- Overall Length (Sprinkler Body): 2” (50 mm)
- Patents Pending

Material Standards:
- Sprinkler Body: QM Brass and Brass UNS-C84400
- Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with Teflon Tape
- Seat: Brass UNS-C31400
- Deflector Ring: Brass UNS-C23000
- Deflector Pins: Stainless Steel UNS-S30200
- Halo: Brass UNS-C31400 or Phosphor Bronze UNS-C51000
- Flow Shaper: Phosphor Bronze UNS-C51000
- Lever Bar Ring: Brass UNS-C31400 or Brass UNS-C84400
- Compression Screw: 18-8 Stainless Steel
- Fusible Link Assembly: Nickel Alloy and Eutectic Solder
- Fusible Link Levers: Stainless Steel UNS-S31600
- Guide Pin: Stainless Steel UNS-S43000
- Shipping Cap: Polyethylene

Cover Assembly Materials:
- Cover Plate Assembly: Copper UNS-C11000 and Brass UNS-C26800
- Spring: Beryllium Nickel
- Solder: Eutectic

Ordering Information: (Also refer to the current Viking price list.)
Viking Freedom® Residential Concealed HSW Sprinkler VK480 and Cover Plate Assembly must be ordered separately:
- Sprinkler: Part No. 16116AC (includes a 165 °F (74 °C) rated sprinkler with a protective plastic cap covering the unit).

Form No. F_121609
Replaces page 153a-f, dated August 4, 2011. (Revised sprinkler materials and added reference to TIA 1028R.)
Cover Plate Assembly: Base Part No. 16207 (3-5/16” diameter)
Specify finish and temperature rating of the cover plate assembly by adding the appropriate suffixes for the finish and the cover temperature rating to the base part number:
Finish Suffix: Painted White = M-/W
Temperature Suffix: 135 °F (57 °C) = A
For example, cover 16207 with a White Painted finish and a 135 °F (57 °C) temperature rating = 16207MA/W.

Available Finishes And Temperature Ratings: Refer to Table 1.
Accessories: (Also refer to the “Sprinkler Accessories” section of the Viking data book.)
Sprinkler Wrenches**:
A. Heavy Duty Wrench Part No. 16208W/R** (available since 2010)
B. Head Cabinet Wrench Part Number 16267 *** (available since 2010)
C. Optional Large Concealed Cover Plate Installer Tool Part No. 14867 (available since 2007)
**Requires a ½” ratchet (not available from Viking).
***Ideal for sprinkler cabinets.
Sprinkler Cabinet: Part No. 01731A (available since 1971)

4. INSTALLATION
Refer to appropriate NFPA Installation Standards. For NFPA 13D horizontal ceiling criteria and slopes, refer to TIA 1028R for slope ceiling criteria exceptions.

5. OPERATION
During fire conditions, when the temperature around the sprinkler approaches its operating temperature, the cover plate detaches. Continued heating of the exposed sprinkler causes the fusible element to disengage, releasing the sealing assembly. Water flowing through the sprinkler orifice strikes the flow shaper, forming a uniform spray pattern over a specific area of coverage determined by the water supply pressure at the sprinkler to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE
Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY
Viking Freedom® Residential Concealed Horizontal Sidewall Sprinkler VK480 is available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE
For details of warranty, refer to Viking’s current list price schedule or contact Viking directly.

DESIGN CRITERIA

(Also refer to the Approval Chart above.)

cULus Listing Requirements:

When using Viking Residential Concealed Horizontal Sidewall Sprinkler VK480 for systems designed to NFPA 13D or NFPA 13R, apply the listed areas of coverage and minimum water supply requirements shown in the Approval Chart above.

For systems designed to NFPA 13:

The number of design sprinklers is to be the four contiguous most hydraulically demanding sprinklers. The minimum required discharge from each of the four sprinklers is to be the greater of the following:

• The flow rates given in the Approval Chart above for NFPA 13D and NFPA 13R applications for each listed area of coverage, or
• Calculated based on a minimum discharge of 0.1 gpm/sq. ft. over the “design area” in accordance with sections 8.5.2.1 or 8.6.2.1.2 of NFPA 13.

Orient the top of the sprinkler element parallel with the ceiling as shown in Figure 3.

• The flow rates given in the Approval Chart above for NFPA 13D and NFPA 13R applications for each listed area of coverage, or
• Calculated based on a minimum discharge of 0.1 gpm/sq. ft. over the “design area” in accordance with sections 8.5.2.1 or 8.6.2.1.2 of NFPA 13.

Orient the top of the sprinkler element parallel with the ceiling as shown in Figure 3.

Minimum distance between residential sprinklers: 8 ft. (2.4 m).

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to pages RES1-17 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA and any other similar Authorities Having Jurisdiction, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable. Final approval and acceptance of all residential sprinkler installations must be obtained from the Authorities Having Jurisdiction.

1. DESCRIPTION
Viking Quick Response Concealed Horizontal Sidewall Sprinkler VK481 is a small solder link and lever spray sprinkler designed for installation on concealed pipe systems. The sprinkler is hidden from view by a low profile, small diameter cover plate installed flush with the wall.

The two-piece design allows installation and testing of the sprinkler prior to installation of the cover plate. The “push-on”, “pull-off” design of the concealed cover plate assembly allows easy installation of the cover plate after the system has been tested and finish has been applied to the wall, while also permitting up to ¼" (6.4 mm) of horizontal adjustment. The cover assembly can be removed and reinstalled, allowing access behind the wall without taking the sprinkler system out of service and removing the sprinkler.

2. LISTINGS AND APPROVALS
cULus Listed: Category VNIV
Refer to the Approval Chart on page 63j and Design Criteria on page 63k for cULus Listing requirements that must be followed.

3. TECHNICAL DATA
Specifications:
Available since 2012.
Minimum Operating Pressure: 7 psi (0.5 bar)
Rated to 175 psi (1207 kPa) water working pressure.
Thread size: 1/2" (15 mm) NPT
Nominal K-Factor: 5.6 U.S. (80.6 metric †)
† Metric K-factor measurement is shown in Bar. When pressure is measured in kPa, divide the metric K-factor shown by 10.0.
Available Cover Plate Horizontal Adjustment: 1/4" (6.4 mm)
Overall Length (Sprinkler Body): 2" (50 mm)
Patents Pending
Material Standards:
Sprinkler Body: QM Brass and Brass UNS-C84400
Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with Teflon Tape
Seat: Brass UNS-C31400
Deflector Ring: Brass UNS-C23000
Deflector Pins: Stainless Steel UNS-S30200
Halo: Brass UNS-C31400 or UNS-C31600 or Phosphor Bronze UNS-C51000
Flow Shaper: Phosphor Bronze UNS-C51000
Lever Bar Ring: Brass UNS-C31400 or Brass UNS-C84400
Compression Screw: 18-8 Stainless Steel
Fusible Link Assembly: Nickel Alloy and Eutectic Solder
Fusible Link Levers: Stainless Steel UNS-S31600
Guide Pin: Stainless Steel UNS-S43000
Shipping Cap: Polyethylene
Cover Assembly Materials:
Cover Plate Assembly: Brass UNS-C26000 or UNS-C26800
Spring: Nickel Alloy
Solder: Eutectic

Ordering Information: (Also refer to the current Viking price list.)
Viking Quick Response Concealed Horizontal Sidewall Sprinklers and Cover Plate Assemblies must be ordered separately:
Sprinkler: Base Part No. 17555A (includes sprinkler with a protective plastic cap covering the unit).
Specify sprinkler temperature rating by adding the appropriate suffix for the temperature rating to the base part number:
Temperature Suffix: 165 °F (74 °C) = C, 220 °F (104 °C) = F
For example, sprinkler VK481 with a 165 °F (74 °C) temperature rating = 17555AC.
Cover Plate Assembly: Base Part No. 16207
Specify finish and temperature rating of the cover plate assembly by adding the appropriate suffixes for the finish and the cover temperature rating to the base part number:
Temperature Suffix: 135 °F (57 °C) = A, 165 °F (74 °C) = C
For example, cover 16207 with a Polished Chrome finish and a 165 °F (74 °C) temperature rating = 16207FC.

Available Finishes And Temperature Ratings: Refer to Table 1.

Accessories: (Also refer to the “Sprinkler Accessories” section of the Viking data book.)
Sprinkler Wrenches:
A. Heavy Duty Wrench Part No. 16208W/R* (available since 2010)
B. Head Cabinet Wrench Part Number 16267** (available since 2010)
C. Optional Large Concealed Cover Plate Installer Tool Part No. 14867 (available since 2007)

*Requires a ½” ratchet (not available from Viking).
**Ideal for sprinkler cabinets.

Sprinkler Cabinet: Part No. 01731A (available since 1971)

4. INSTALLATION
Refer to appropriate NFPA Installation Standards.

5. OPERATION
During fire conditions, when the temperature around the sprinkler approaches its operating temperature, the cover plate detaches. Continued heating of the exposed sprinkler causes the fusible element to disengage, releasing the sealing assembly. Water flowing through the sprinkler orifice strikes the flow shaper, forming a uniform spray pattern to extinguish or control the fire.

6. INSPECTIONS, TESTS AND MAINTENANCE
Refer to NFPA 25 for Inspection, Testing and Maintenance requirements.

7. AVAILABILITY
Viking concealed sprinklers are available through a network of domestic and international distributors. See The Viking Corporation web site for the closest distributor or contact The Viking Corporation.

8. GUARANTEE
For details of warranty, refer to Viking’s current list price schedule or contact Viking directly.

CULUS Listing Requirements:
Quick Response Concealed Horizontal Sidewall Sprinkler VK481 is CULUS Listed for installation in accordance with the latest edition of NFPA 13 for standard coverage sidewall spray sprinklers as indicated below:

- Designed for use in Light or Ordinary Hazard Occupancies for use below smooth, flat, horizontal ceilings only.
- Position with the centerline of the sprinkler located between 4-3/8” and 12-3/8” (112 mm and 314 mm) below the ceiling. THE TOP OF THE SPRINKLER BODY AND THE TOP OF THE INSTALLATION WRENCH ARE MARKED “TOP”. Orient the top of the sprinkler element parallel with the ceiling as shown in Figure 3.
- This sprinkler must be installed flush with the wall.
- Protection areas and maximum spacing shall be in accordance with the tables provided in NFPA 13 for standard sidewall sprinklers. Minimum spacing allowed is 7 ft. (2.1 m).
- Maximum distance from end walls shall be no more than one-half of the allowable distance between sprinklers. The distance shall be measured perpendicular to the wall. Minimum distance from end walls is 4 in. (102 mm).
- The sprinkler installation and obstruction rules contained in NFPA 13 for standard coverage sidewall spray sprinklers must be followed.

NOTE: Concealed sprinklers must be installed in neutral or negative pressure plenums only.

IMPORTANT: Always refer to Bulletin Form No. F_091699 - Care and Handling of Sprinklers. Also refer to page QR1-3 for general care, installation, and maintenance information. Viking sprinklers are to be installed in accordance with the latest edition of Viking technical data, the appropriate standards of NFPA, FM Global, LPCB, APSAD, VdS or other similar organizations, and also with the provisions of governmental codes, ordinances, and standards, whenever applicable.

Figure 2: Identification of Custom Paint Color for Concealed Covers
1. DESCRIPTION

Viking Microfast® and MicrofastHP® Quick Response Pendent Sprinklers are small, thermosensitive, glass-bulb spray sprinklers available in several different finishes and temperature ratings and K-Factors to meet design requirements. The special Polyester, Polytetrafluoroethylene (PTFE), and Electroless Nickel PTFE (ENT) coatings can be used in decorative applications where colors are desired. In addition, these coatings have been investigated for installation in corrosive atmospheres and are cULus listed as corrosion resistant as indicated in the Approval Chart. (Note: FM Global has no approval classification for PTFE and Polyester coatings as corrosion resistant.)

2. LISTINGS AND APPROVALS

- **cULus Listed:** Category VNIV
- **FM Approved:** Classes 2001, 2002, 2015, and 2017
- **NYC Approved:** Calendar Number 219-76-SA and MEA 89-92-E, Volume 16
- **ABS Certified:** Certificate 04-HS407984C-PDA
- **VdS Approved:** Certificates G4040095, G4040097, G4060056, G4060057, G4880045, G4930038, and G4980021
- **LPC Approved:** Ref. Nos. 096e/03 and 096e/04
- **CE Certified:** Standard EN 12259-1, EC-certificate of conformity 0786-CPD-40130, 0786-CPD-40170 and 0786-CPD-40279, 0832-CPD-2001, and 0832-CPD-2003
- **MED Certified:** Standard EN 12259-1, EC-certificate of conformity 0832-MED-1003 and 0832-MED-1008

NOTE: Other International approval certificates are available upon request.

Refer to Approval Chart 1 and Design Criteria on page 41d for cULus Listing requirements and refer to Approval Chart 2 and Design Criteria on page 41f for FM Approval requirements that must be followed.

3. TECHNICAL DATA

- **Specifications:**
  - Available since 1987.
  - Minimum Operating Pressure: 7 psi (0.5 bar)*
  - Maximum Working Pressure: Sprinklers 12282 and 12290 are rated for use with water working pressures ranging from the minimum 7 psi (0.5 bar) up to 250 psi (17 bar) for high-pressure systems. High-pressure (HP) sprinklers can be identified by locating “250” stamped on the deflector. All other Part Nos. not mentioned above are rated to a maximum 175 psi (12 bar) wwp.
  - Factory tested hydrostatically to 500 psi (34.5 bar)
  - Thread size: Refer to the Approval Charts
  - Nominal K-Factor: Refer to the Approval Charts
  - Glass-bulb fluid temperature rated to -65 °F (-55 °C)
  - Overall Length: Refer to the Approval Charts

- **cULus Listing, FM Approval, and NFPA 13 shall install a minimum of 7 psi (0.5 bar). The minimum operating pressure for LPCB and CE Approvals ONLY is 5 psi (0.35 bar).**

- **Material Standards:**
  - Frame Casting: Brass UNS-C84400 or QM Brass for Sprinklers 06662B and 12282. Brass UNS-C84400 for all other sprinklers.
  - Deflector: Phosphor Bronze UNS-C51000 or Copper UNS-C19500 for Sprinklers 06662B, 06666B, and 06765B. Copper UNS-C19500 for Sprinkler 12282. Phosphor Bronze UNS-C51000, Copper UNS-C19500 or Brass UNS-C26000 for Sprinkler 06720B. Brass UNS-C26000 for all other Sprinklers.
  - Bushing (for Sprinklers 06718B, 06720B, and 12290): Brass UNS-C36000
  - Bulb: Glass, nominal 3 mm diameter
  - Belleville Spring Sealing Assembly: Nickel Alloy, coated on both sides with PTFE Tape
  - Screw: Brass UNS-C36000
  - Pip Cap and Insert Assembly: Copper UNS-C11000 and Stainless Steel UNS-S30400
  - For PTFE Coated Sprinklers: Belleville Spring-Exposed, Screw-Nickel Plated, Pip Cap-PTFE Coated
  - For Polyester Coated Sprinklers: Belleville Spring-Exposed
  - For ENT Coated Sprinklers: Belleville Spring-Exposed, Screw and Pipcap - ENT coated.

*NOTE: Viking Technical Data may be found on The Viking Corporation's Web site at http://www.vikinggroupinc.com. The Web site may include a more recent edition of this Technical Data Page.*

**UL Rated 2-A:10-B:C**

**Description**

Fights fires common to the home living areas such as wood, fabrics, furnishings, and drapes.

Meets NFPA recommendations for primary home protection and has a 10 year warranty.

Features bilingual nameplate and carton.

White finish.

**Features**

- Pressure gauge allows for immediate pressure status check
- Easy-to-pull safety pin
- Rust and impact resistant nylon handle
- 4 lb. of fire extinguishing agent (Average)
- 10 year limited warranty
- UL approved wall hanger
- Powder coated cylinder for corrosion protection

**At a Glance**

- Model FX210R
- Multipurpose Dry Chemical
- UL listed
- UL rated 2-A:10-B:C
- Supplied with wall hanger
- Monoammonium Phosphate
- 10 year limited warranty

Kidde

AC Wire-in Combination Carbon Monoxide & Smoke Alarm

- 120VAC Direct Wire with Battery Backup
- Alarm/Voice message warning system
- Permanent independent carbon monoxide and smoke alarm sensors

Part Number 21006377 (Previously 900-0114)  Model KN-COSM-IB

Description

The Kidde 2106377 Combination Carbon Monoxide & Smoke Alarm provides two important safety devices in a single unit. This alarm includes a voice warning system that announces “Fire, Carbon Monoxide, Low Battery or Smart Hush™ Activation”. The voice alarm eliminates any confusion and clearly warns you and your family of a smoke or carbon monoxide danger, or if your battery is in need of replacement. This technically advanced combination alarm includes 9V battery backup providing protection even during a power outage when many incidences occur. The 2106377 is an easy to install alarm that is suitable for all living areas. It has a 7-year life and a 5-year limited warranty.

Alarm Warnings

Fire: The red LED will flash and be accompanied by three long alarm beeps followed by a verbal warning message “FIRE! FIRE!”. The alarm will repeat pattern until smoke is eliminated.

Carbon Monoxide: Four short alarm beeps followed by a verbal warning “WARNING! CARBON MONOXIDE!” This continues until

Features and Benefits

- Smart Interconnect™ – Interconnects up to 24 Kidde devices (of which 18 can be initiating).
- Battery Backup (9V battery included) – Provides protection during power outages.
- Battery Lockout System – Minimized risk of mounting unit without installation of battery.
- Alarm Tamper Resist – Helps deter from tampering and theft.
- Adjustable Mounting Bracket – Makes installation fast and easy.
- Peak Level Memory – Announces “CO previously detected” if alarm had detected a CO level of 100ppm or higher since it was last reset.
- Smart Hush™ Feature – Silences nuisance alarms for approximately 10 minutes. (Smoke must be present before Smart Hush™ is activated)
- Ionization Sensor Technology – Ideal for detecting fast flaming and other types of fires.
- Test Button Functions – Tests the unit for proper operation.
Installation of Smoke Alarm

The combination alarm should be installed to comply with all local codes having jurisdiction in your area, Article 760 of the National Electric Code, and NFPA 72. Make certain all alarms are wired to a single, continuous (non-switched) power line, which is not protected by a ground fault interrupter. A maximum of 1000 ft. of wire can be used in the interconnect system. Use standard UL listed household wire (18 gauge or larger as required by local codes).

Technical Specifications

- **Part Number:** 21006377
- **Model:** KN-COSM-IB
- **Power Source:** 120VAC, 60Hz 25mA max per alarm, 9V battery backup
- **Smoke Sensor:** Ionization
- **CO Sensor:** Electrochemical
- **Audio Alarm:** 85dB at 10ft
- **Temperature Range:** 40˚F (4.4˚C) to 100˚F (37.8˚C)
- **Humidity Range:** 5%-95% relative humidity
- **Size:** 5.75" in diameter x 1.7" depth
- **Weight:** 1lb
- **Wiring:** Quick connect plug with 8" pigtails
- **Interconnects:** Up to 24 Kidde devices (of which 18 can be initiating)
- **Warranty:** 5 year limited

**LEAD FREE**

**Series LFWPBV**

2-Piece, Full Port, Brass Ball Valves with PEX Ends

Sizes: ½" - 1" (15 - 25mm)

Series LFWPBV 2-Piece, Full Port, Brass Ball Valve with PEX Ends are designed for use in PEX piping systems. They feature brass PEX end tailpieces designed for easy crimping into a PEX piping system. The Series LFWPBV features Lead Free* construction to comply with Lead Free* installation requirements.

**Features**

- 2-piece, full port design
- Forged Lead Free* brass body
- PEX end designed to ASTM F-1807
- Valve rated to 400 WOG
- Crimp connection rated to 160psi at 73°F (23°C)
- Designed specifically for use in PEX piping systems

**Specification**

Approved valve to be 2-piece, full port, forged brass body, chrome plated brass ball, virgin PTFE seats and stem packing, and Viton® stem O-ring. Ball valve rated to 400 WOG and PEX end must comply with ASTM F-1807 standard. Crimp joint rated at 160psi at 73°F (23°C). The valve shall be constructed using Lead Free* brass. Lead Free* brass ball valves shall comply with state codes and standards, where applicable, requiring reduced lead content. Valve shall be Watts Series LFWPBV.

**Pressure-Temperature**

Ball Valve Rating: 400 WOG

Crimp Connection Rating: 160psi at 73°F (23°C) (refer to PEX piping manufacturers guidelines)

*The wetted surface of this product contacted by consumable water contains less than one quarter of one percent (0.25%) of lead by weight.

**LEAD FREE**

**Series LF600**

**Lead Free® Brass Silent Check Valves**

**Sizes: ¼" – 2" (8-50mm)**

Series LF600 Lead Free® brass silent check valves efficiently perform all of the functions of a swing check or vertical lift check valves and at the same time operate silently to prevent the effects of water hammer. The Series LF600 check valves feature Lead Free® construction to comply with Lead Free® installation requirements.

**Features:**

- Conical Lead Free® brass disc for full fluid flow
- PTFE seat
- Install in horizontal or vertical position
  (consult factory for proper use in vertical installations)
- Low pressure drop equivalent to a swing check
- Stainless steel guide rod and spring (1½" to 2")
- Silent operation
- Threaded ends

**Specifications**

A Lead Free® brass silent check valve shall be installed as indicated on the plans. The valve shall have a conical Lead Free® brass disc, PTFE seat and silent operation. Pressure rating no less than 400psi (27.6 bar) WOG non-shock and 15psi (1 bar) WSP. The silent check valve shall be constructed using Lead Free® brass. Lead Free® silent check valves shall comply with state codes and standards, where applicable, requiring reduced lead content. Valve shall be a Watts Series LF600.

**Application Notes**

These valves are not suggested for installation in sewage ejector piping.

**WARNING:** Do not use for reciprocating air compressor service.

---

*The wetted surface of this product contacted by consumable water contains less than one quarter of one percent (0.25%) of lead by weight.*

---

**Materials**

- **Body: Lead Free® brass**
- **Guide Bushing: Stainless Steel**
- **Spring: Stainless Steel**
- **Check: Lead Free® brass**
- **Seat: PTFE**
- **O-ring: Nitrile (1½" – 2" only)**
- **Adapter: 1½" – 1" (3-25mm) Lead Free® brass**
- **1¼" – 2" (32-50mm) Lead Free® brass**

**WaterPEX® Tubing**

Watts WaterPEX® is manufactured in accordance with ASTM International F676 and F877 to SDR-9 dimensional standards. It is listed by the National Sanitation Foundation to NSF Standards 14 and 61 for use in potable water systems. WaterPEX® is listed by NSF to be in compliant to the Uniform Plumbing Code. All WaterPEX® is labeled B137.5 which indicates that it is compliant to the CSA Standards B137.5.

“Triplex Diaphragm”
3426 / 3526 / 3626 Series
Automatic Water System Pump

**Features**
- Timing
- Noise Absorbing Mounts
- 1 Port Fittings
- Bypass: Less Pulsation
- No need for accumulator tank
- Made of Resistant Materials
- SO 8846 (Ignition protection)

**Specifications**
- Permanent Magnet, Ball Bearing
- Totally Enclosed. CE Models are UL suppressed.
- Three chamber diaphragm design
- Self-priming up to 9 feet suction lift;
- Pumpable to run dry without damage

**Dimensions English (SI)**

<table>

- Yes
- Yes
- Yes
- Yes

**Notes**
- Suppressed models are identified by a prefix “R” and a CE mark on the label (i.e., R3626144).
- Request Of Conformance (SDOC) is available upon request.

**Operation**
- Turn switch off and battery fully charged, fill water tank, open all faucets, then turn pump switch on. Water will flow. When the water is free of air, turn faucets off. Remember, you are filling the water heater and the toilet water lines. When all valves are shut-off, pump will stop. Should pump fail to stop, turn switch off and see the troubleshooting guide. **CAUTION** - Pump surface will get hot to the touch if operated for extended periods of time at pressurized conditions.

**Typical Application**
- JDX 148
- 12V dc
- 3.5
- 2.0 (8)
- 25 (1.7)
- Yes

Hot water without the wait

Before Grundfos, hot water recirculation solutions were difficult, if not impossible. Now, installations in both new construction and existing homes are quick, easy and profitable.

Features & Benefits:

- Installations take an hour or less
- In retrofits, the Comfort System bypass valve makes it all possible with no return line and no need for electricity under the sink
- Uses less energy than a 25 watt light bulb (Comfort System Only)
- Can save up to 16,000 gallons of water per year
- Backed by a 30-month warranty
- All products comply with NSF-61 and AB 1953 standards

For more information, go to: moderncomfort.grundfos.us
--- Comfort System UP 15-10 SU7P TLC (Part# 595916) ---

**Pump Technical Data:**
- **Flow Range:** 0 to 6.5 U.S. GPM
- **Head Range:** 0 to 6.0 U.S. Feet
- **Motor:** Single Phase, 115V
- **Min. Fluid Temperature:** 36°F (2°C)
- **Max. Fluid Temperature:** 150°F (66°C)
- **Max. Working Pressure:** 145 PSI

**Electrical Data:**
- **Volts:** 1X115V
- **Watts:** 25W
- **Amps:** 0.23A

**Approvals:**
- ANSI/NSF61 and IAPMO listed

CSI #: 22 12 00  

Bladder Tanks and Collapsible Pillow Tanks  

ATL Aqua-Flex® water bladders are your best water storage choice for short or long-term, on-site water storage:

- Clean, Sanitary POTABLE Water Storage
- Fast, Economical NON-POTABLE Water Storage

Aqua-Flex® bladders offer the most desirable characteristics:

- Light, Strong & Flexible
- Instant set-up, Just Unfold & Fill
- Collapsible to Only 4% of Full Volume
- Meets Mil-T-53029, U.S. DOD Specs ATPD-2265 and NSF-Std61

Available in two grades to suit your application:

HEAVY DUTY: LEVEL 3 Aqua-Flex®
Heavy-Duty, Military-Industrial Style Rubberized Nylon Water Tanks. U.S. DOD Specs ATPD-2265, Mil-T-53029 and NSF-Std 61 for Potable (drinking) water, deionized water, “ROPU” water and cistern water.

MEDIUM DUTY: LEVEL 2 Aqua-Flex®
Light-Duty, Commercial-Style Polyester Reinforced Water Tanks. “FDA” type for drinking water and aqueous solutions. (Not suitable for transport use)

For Mild Liquid Chemicals - Technical Specifications

www.atlinc.com/pillow.html#C2
**Models: PLT-5, PLT-12, PLT-20**

**Potable Hot Water Expansion Tank**

**Installation Instructions**

⚠️ **WARNING!**

Improper installation, adjustment, alteration, service or maintenance can cause property damage, serious bodily injury or death. Read instructions completely before proceeding with installation. Only qualified personnel may install or service this equipment in accordance with local codes and ordinances.

Do not exceed 80psi (5.5 bar) air charge. Air charge pressure exceeding 80psi (5.5 bar) could become hazardous and will void any and all warranties, either written or implied. Failure to follow these instructions will result in the possibility of property damage, serious bodily injury or death.

This Expansion Tank is designed and intended for water storage at a maximum pressure of 150psi (10.3 bar) and a maximum temperature of 200°F (93°C). Any use other than for potable water or a sustained or instantaneous pressure in excess of 150psi (10.3 bar) or 200°F (93°C) is **UNSAFE** and can cause property damage, serious bodily injury or result in death.

---

**Disclaimer:** The manufacturer of this tank does not accept any liability or other responsibility for personal injury or property damage resulting from improper use, installation or operation of this tank or the system of which it is a part.

**Notice:** The expansion tank, piping and your connections may in time leak. Select a location to install the expansion tank where a water leak will not damage the surrounding area. The manufacturer is not responsible for any water damage in connection with this expansion tank.

Installation

1. Before beginning installation determine the system pressure.
   a. Open a faucet to allow the system pressure to equalize.
   b. Close faucet.
   c. Read the system pressure at the pressure gauge (Figure 1).

2. The expansion tank pre-charge must be set to the system pressure as determined in Step 1. Pre-charge prior to installation in the system.
   **Caution:** Pre-charge prior to installation in the system. Do not adjust the air pre-charge of the expansion tank with the system under pressure. The air pre-charge should only be adjusted under zero system pressure.

   **Note:** The normal pre-charge is 20psi (138 kPa). **Do not exceed 80psi.** If system pressure exceeds 80psi (5.5 bar) it will be necessary to either:
   a. Add a pressure reducing valve to the system or,
   b. Locate the expansion tank in a riser where the static pressure is below 80psi (5.5 bar).

   a. Unscrew the protective cap from the air inlet valve.
   b. Using a tire pressure gauge, check the tank pre-charge pressure.
   c. If necessary, pressurize the tank to the proper setting using a manual bicycle tire pump. **Caution do not exceed 80psi.**
   d. Replace the protective air cap.

3. Shut off the water supply valve.

4. Shut off power source to the water heater, (electricity, gas, oil burner switch) and drain system following water heater manufacturer recommendations.

5. Install the expansion tank in the system (refer to Figure 1).
   a. The weight of the expansion tank filled with water is supported by the system piping. Therefore, it is important that, where appropriate, the piping has suitable bracing (strapping, hanger, brackets).
   b. The expansion tank may be installed vertically (preferred method) or horizontally. **Caution: The tank must be properly supported in horizontal applications.**
   c. This expansion tank, as all expansion tanks, may eventually leak. **Do not install without adequate drainage provisions.**

6. Turn on the water supply valve.

7. Open a hot water fixture and allow water flow until all air is removed from the system.

8. Reapply power to the water heater.

9. Open a hot water fixture to allow a slight flow until the hot water has reached operating temperature.

10. Recheck system pressure following Step 1.a through c.

---

**Limited Warranty:** Watts Regulator Co. (the “Company”) warrants each product to be free from defects in material and workmanship under normal usage for a period of one year from the date of original shipment. In the event of such defects within the warranty period, the Company will, at its option, replace or recondition the product without charge. THE WARRANTY SET FORTH HEREIN IS GIVEN EXPRESSLY AND IS THE ONLY WARRANTY GIVEN BY THE COMPANY WITH RESPECT TO THE PRODUCT. THE COMPANY HEREBY SPECIFICALLY DISCLAIMS ALL OTHER WARRANTIES, EXPRESS OR IMPLIED. THE COMPANY MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED. INCLUDING BUT NOT LIMITED TO THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. The remedy described in the first paragraph of this warranty shall constitute the sole and exclusive remedy for breach of warranty, and the Company shall not be responsible for any incidental, special or consequential damages, including without limitation, lost profits or the cost of repairing or replacing other property which is damaged if this product does not work properly, other costs resulting from labor charges, delays, vandalism, negligence, fouling caused by foreign material, damage from adverse water conditions, chemical, or any other circumstances over which the Company has no control. This warranty shall be invalidated by any abuse, misuse, misapplication, improper installation or improper maintenance or alteration of the product.

Some States do not allow limitations on how long an implied warranty lasts, and some States do not allow the exclusion or limitation of incidental or consequential damages. Therefore the above limitations may not apply to you. This Limited Warranty gives you specific legal rights, and you may have other rights that vary from State to State. You should consult applicable state laws to determine your rights. SO FAR AS IS CONSISTENT WITH APPLICABLE STATE LAW, ANY IMPLIED WARRANTIES THAT MAY NOT BE DISCLAIMED, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, ARE LIMITED IN DURATION TO ONE YEAR FROM THE DATE OF ORIGINAL SHIPMENT.

---

**Caution:** Pre-charge prior to installation in the system. Do not adjust the air pre-charge of the expansion tank with the system under pressure. The air pre-charge should only be adjusted under zero system pressure.

If necessary, adjust the pressure reducing valve to the expansion tank pre-charge as determined in Step 2.

**Important!**
- A pressure relief valve sized and installed in accordance with local codes must be incorporated in the systems requiring a combined temperature and pressure safety relief valve. The temperature and pressure safety relief valve should be sized and installed in accordance with local codes.
- Never plug a safety Relief Valve.

---

**California Proposition 65 Warning**

**Warning:** This product contains chemicals known to the State of California to cause cancer and birth defects or other reproductive harm. (California law requires this warning to be given to customers in the State of California.)

Repair Kit P/N: 3350 RPM 60 Hertz

Technical Data

PERFORMANCE RANGE:
- Flow: 5 - 62 U.S. GPM
- Head: 0 - 31 feet of water
- Horsepower: 1/4, 1/3, 1/2 HP

SOLIDS HANDLING:
- 3/8 Inch Spherical

PUMPING LEVEL:
- Manual Operation
  - Minimum 1 3/16" or 1/2" with suction strainer removed.
- Automatic Operation
  - Minimum 4" for KP 150 & KP 250
  - Minimum 4 3/8" for KP 350

MOTOR TYPE:
- AC Induction
- Non-toxic motor liquid
- Class F insulation
- Manufactured by Grundfos

THERMAL PROTECTION:
- Automatic reset

FLUID TEMPERATURE RANGE:
- 32° - 122°F Continuous Operation
- 123° - 158°F Intermittent Operation

Intermittent run time, 2 minutes every 30 minutes totally submerged

DISCHARGE SIZE:
- 1 1/4" NPT

APPROVALS:
- CE
- UL

Applications

Use for:
- Effluent
- Clear or dirty sump water
- Grey water
- Draining ponds, pits and tanks
- De-Watering, Draining and filling tanks, Draining pools & spas
- Light Chemical Mixing*
- Fountains

Do not use for:
- Raw sewage
- Flammables
- Highly corrosive liquids
- * Flush after use

Performance Curve

- KP 350
- KP 250
- KP 150

OneFlow® Residential Anti-Scale Systems

Connection Sizes: 1" (25mm) MNPT

Flow Rates: Up to 16 gpm (60 lpm)

OneFlow® Residential Anti-Scale Systems provide a home with protection from internal hardness related scale formation on plumbing surfaces. Water using appliances and plumbing fixtures also enjoy a longer lifespan because hardness scale build up on internal parts no longer occurs. These systems are specifically designed for residential applications. OneFlow® Residential systems should be installed at the point-of-entry to a home to treat both the hot and the cold water.

OneFlow® Residential systems prevent scale by transforming dissolved hardness minerals into harmless, inactive microscopic crystal particles. These crystals stay suspended in the water and are passed to drain, thereby having a greatly reduced ability to react negatively like dissolved hardness does. These systems require very little maintenance, no backwashing, no salt, and no electricity. Typical hardness problems, especially build-up of scale in pipes, water heaters, boilers, fixtures, and appliances are no longer a concern.

OneFlow® Residential systems are not water softeners or chemical additives (like anti-scalants or sequestrants). They are scale prevention devices with proven third party laboratory test data and years of successful applications. OneFlow® Residential systems are the one water treatment device that effectively provides scale protection in the home and are a great alternative to water softening (ion exchange) or scale sequestering chemicals.

Features

- Chemical free scale prevention and protection – converts hardness minerals to harmless, inactive microscopic crystals making OneFlow® an effective alternative technology to a water softener for the prevention of scale due to water hardness
- Virtually maintenance free – No salt bags or other chemicals to constantly add
- No control valve, no electricity and no wastewater
- Uses environmentally friendly “green” technology
- Improves efficiency of all water using appliances – both hot and cold

*Always install OneFlow® Residential systems before the water heating device.

Note: Do not use with water that is microbiologically unsafe or of unknown quality without adequate disinfection before or after the system.

Series OFRES
Whole House OneFlow® Residential Anti-Scale Systems
CSI #: 22 31 00

Feed Water Chemistry Requirements

- **pH**: 6.5 to 8.5
- **Hardness (maximum)**: 75 grains (1282 ppm CaCO₃)*
- **Water Pressure**: 15psi to 100psi (103 kPa to 6.9 bar)
- **Temperature**: 40°F to 110°F (5°C to 43°C)
- **Chlorine**: < 2ppm
- **Iron (maximum)**: 0.3 mg/l
- **Manganese (maximum)**: 0.05 mg/l
- **Copper**: < 0.1 mg/l
- **Oil & H₂S**: None allowed
- **Polyphosphate**: None allowed
- **Silica (maximum)**: 10 ppm

*Note: These systems prevent hardness related scale formation inside the plumbing system of the home at influent hardness levels of 75 grains per gallon of calcium carbonate and less. Due to variances in water chemistry certain aesthetic conditions external of the plumbing system may not be attained. Water known to have heavy loads of dirt and debris should be prefiltered. Recommended PWFL-SED-BB-10-20M-PMT PWHS-G-AST-BB-10-1-PR. Copper lines need to be passivized for a minimum of 4 weeks before placing unit into service. Not for use on closed loop systems.

The overall height and the height of the fitting varies due to material variations and assembly tolerances. Please allow additional clearances above the tank for making connections.
AirTap™ Hybrid

The Next Generation Water heater

Available in 50 and 66 Gallon Models

- Best efficiency in the industry
- High recovery rate
- Made entirely from stainless steel 304
- 3/4" water inlet, outlet, and condensate line
- Backup heating element
- Top exhaust duct
- Intensive cold dehumidification at a rate of 1 gallon per minute when heat pump is in operation
- User-friendly touch pad controls
- Built-in anode rod
- Easy access side connections
- Water temperature can be set anywhere between 80°F to 125°F
- 3 operation modes:
  - Energy saver (heat pump only)
  - Hybrid (heat pump & electric element)
  - High thermal (electric element only)
- 4-way reversing valve for auto defrost
- Auto overheat detection
- Environmental friendly refrigerant R410a
- Gas operates efficiently in ambient temperature ranging between 25°F to 125°F
- Built-in shutoff valve
- Low noise unit
- Nass line valve
- Limited Lifetime Warranty

### Installation Notes

Install this product according to the installation guide.

Install the Rite-Temp® valve according to the valve installation guide.

**NOTICE: Risk of product damage.** Long screws, for installing trim, can damage the K-2971-KS valve. Consult the trim installation guide to verify if the thin wall installation kit (88526) is needed.

Avoid cross-flow conditions. Do not install shut-off device on either valve outlet.

Cap shower outlet if deck-mounted spout, diverter, or handshower is connected to the spout outlet.

Install straight pipe or tube drop of 7” (178 mm) to 18” (457 mm) with single elbow between valve and wall-mount spout.

### Installation Notes

Install this product according to the installation guide.

**For back-to-back toilet installations:** Use only a 45° double wye fitting.

Will comply with the Americans with Disabilities Act (ADA) when installed per the requirements of the 2010 ADA Standards of Accessible Design, Section 604 Water Closets, of the Act. The Model Plumbing Codes require the installation of elongated open-front toilet seats in public bathrooms.

Will comply with CSA B651 when installed per Clause 4.3.6 of the standard.

Will comply with OBC Barrier Free requirements when installed per Clause 3.8.3.8 and 3.8.3.9.

---

### Product Diagram

For Back-to-Back Installations:
- Use a double wye fitting.
- Do not use a double sanitary tee.

Features
- Solid polypropylene plastic
- Closed-front
- Contoured seat for user comfort
- Quiet-Close™ lid and ring prevents slamming
- Quick-Release™ hinge caps snap open and seat pulls forward for removal
- Quick-Attach™ stainless steel fastener allows for top-mount screwdriver only install
- Slip resistant bumpers hold seat firmly in place

Codes/Standards Applicable
Specified model meets or exceeds the following:
- ANSI Z124.5

Colors/Finishes
- 0: White
- Other: Refer to Price Book for additional colors/finishes

Product Specification
The toilet seat shall be made of solid polypropylene plastic. Product shall be available with closed-front. Product shall have Quiet-Close™ lid and ring that prevent slamming, Quick-Release™ hinge caps snap open and seat pulls forward for removal. Product shall have Quick-Attach™ stainless steel fastener, which allows for top-mount screwdriver only install. Product shall have contoured seat for user comfort. Product shall have slip resistant bumpers that hold seat firmly in place. The toilet seat shall be Kohler Model K-____-____.
- **MATERIAL** – GALVANIZED, ALUMINUM, STAINLESS STEEL, MILD STEEL. OTHER MATERIALS AVAILABLE AS SPECIAL ORDER.
- **SEAMS** – PITTSBURG, SPOT WELD, ARC / MIG WELD
- **LINER** – ½” & 1” ACOUSTIC LINER IS ADHERED WITH GLUE AND WELD PINS. LAGGING USED FOR LINER ENDS

- **STRAIGHT DUCTS AVAILABLE IN ANY SIZE (STANDARD SIZE IS 48” LONG)**
- **SLIP & DRIVE CONNECTION READY**
- **DUCTMATE FRAMES INSTALLED**
- **LARGER SIZE DUCTS HAVE BEADS FOR ADDITIONAL RIGIDITY**

- **ELBOWS AVAILABLE IN RADIUS & SQUARE**
- **ANY ANGLE & SIZE OF ELBOW**
- **GOOSENECKS OR ANY OTHER FITTING CAN HAVE WIRE MESH SCREEN INSTALLED**

- **TRANSITIONS & OFFSETS CAN BE MADE IN ANY SIZE**
- **COMPLEX FITTING & ANGLES? NO PROBLEM – OUR COMPUTERS CAN CALCULATE EVERYTHING AND MAKE SURE THAT THE FITTING IS NOT CHOKED**

- **TAKEOFFS OR BOOTS CAN BE MADE IN ANY SIZE OR ANGLE**
- **TAPS CAN BE MADE WITH A CLINCH COLLAR OR A SIMPLE FLANGE**

- **FLEXIBLE DUCT CONNECTORS OR CANVAS IS AVAILABLE IN 3”x3”x3” WIDTHS AND CAN BE MADE INTO ANY RECTANGULAR OR ROUND SIZE**

- **DRAIN PANS ARE WATER TIGHT PANS MADE IN ANY SIZE AND IN ANY GAUGE**
- **DRAIN OPENINGS CAN BE MADE IN ANY SIZE AND ANY LOCATION ON THE PAN (BOTTOM or SIDES)**
- **A DRAIN COPPER PIPE CAN BE SOLDERED INTO DRAIN OPENING**

- **SLIP CLEATS & DRIVE CONNECTOR CLEATS CAN BE CUT TO SIZE WITH A FITTING ORDER**
- **48” LONG CLEATS ARE SOLD SEPARATELY IN A BUNDLE OF 10**
- **S-CLEATS ARE 26 GAUGE; CAN BE MADE IN OTHER GAUGE**
- **D-CLEATS ARE 24 GAUGE; CAN BE MADE IN OTHER GAUGE**

ROOF CAPS & WALL HOODS

ALDES provides the highest quality roof caps and wall hoods available today.

### Roof Caps

ALDES High Performance Roof Caps are engineered to minimize noise and pressure resistance for maximum airflow, while effectively removing moisture and condensation from the duct system. All roof caps are of a low-profile, low pressure design. All incorporate backdraft dampers and removable screens.

### SOUND ABSORBERS

Duct designed for noise attenuating characteristics. A 40" length may achieve more than 30 dB(A) noise reduction on a typical exhaust system. Inner core made of netting bonded to a helix of spring steel wire. A 1" blanket of fiberglass insulation wraps the inner core. Exterior jacket is a reinforced polyester or vinyl. Designed for low to medium pressure systems. Suitable for use in warm, insulated spaces for exhaust air. Not to be used for supply air. Non-listed.

COPPER

WARRANTY

The entire unit is guaranteed for 3 years, from date of shipment, against all manufacturing defects provided the material has been installed and operated per manufacturer’s instructions and under normal conditions. Warranty is limited to the repair or replacement of the material upon its return freight paid to our factory.

This warranty is not transferable and is limited to the original end user.

ALL SIZES ARE IN INCHES. *Above Galvanized Steel Items (4” to 8” are 26 gauge; 10” and 12” are 24 gauge).

Materials: Galvanized Steel G-90, Copper Type Ca110, Stainless Type 304-2B Finish SMACNA GAUGE ACCORDING TO SIZE. Damper: Aluminum sheet, 0.020”

General: American ALDES Ventilation’s HIGH PERFORMANCE ROOF CAPS are engineered to minimize noise and pressure resistance for maximum airflow, while effectively removing moisture and condensation from the duct system. All roof caps are designed for durability and high aesthetic value.

Construction: American ALDES Ventilation’s low profile, low pressure drop roof caps include integral backdraft/weather dampers, bird screening, no-leak roof flashing, and extended duct collars for simple installation. Available in heavy gauge G90 galvanized steel, 304 2B finish stainless steel or solid copper type CA 110.

Installing the Roof Caps: All caps are designed for installation on any roof pitch or shingling.
## HVAC & Refrigeration

### Registers & Grilles

#### sidewall/ceiling registers

White finish. Stamped-steel registers provide economical air control. Welded steel registers provide max. durability. Adjustable-blade registers are made of aluminum.

#### perimeter baseboard diffusers

Diffusers are multipattern, with 1-pc. dampers.

#### floor registers and grilles

Extra-wide border compensates for oversized floor openings. Surface treatments are dual electrocoated/powder-coated for excellent corrosion resistance. Stamped-steel items provide economical air control. Welded steel registers provide max. durability. Toe-space grilles are good for return air in narrow locations such as stair risers and between kitchen cabinets and floor.

#### Controller features

- On/off
- Sleep mode
- Off timer
- Whooosh mode
- Reverse

#### Mount and drop tube

- Short length, included (6.3 in. / 160 mm)

#### Hanging weight

- 13.2 lb (6 kg)

#### Number of fan speeds

- 6

#### Operating voltage

- 100–240 VAC, 1Φ

#### Operating frequency

- 50–60 Hz

#### RPM (min/max)

- 33/173 RPM

#### Amps (min/max)

- 0.05 - 0.363 A

#### Watts (min/max)

- 2/30 W

#### Ambient operational temperature range

- 32°–120° F (0–49° C)

#### Environment

- UL listed for dry locations

#### Fan mode indicator

- LED display

#### Warranty

- Limited lifetime

ADVANCED FEATURES THAT MAKE A DIFFERENCE

Feel the Difference
Designed for superior heating capacity in low-ambient conditions and absolute comfort, Daikin Inverter Ducted units provide comfortable heating down to 0°F, with up to 100% capacity available at temperatures as low as 14°F. With the ability to operate in cooling mode from 23°F to 115°F, this makes installation easier in most climates since additional supplemental electric heater is not required.

Hear the Difference
Daikin Inverter Ducted systems have sound reducing features such as compressor sound attenuators, but they’re also quieter than conventional systems because they have fewer moving parts and rarely run at full speed. Utilizing inverter technology to maintain comfort settings, Daikin systems most often operate at low speeds with outdoor sound levels in the mid to high 50s dB(A).

Easy Installation
A Daikin Inverter Ducted outdoor unit is not as large and bulky as the outdoor unit on a conventional system. More than one of the compact and lightweight units can be fitted in the bed of a standard pickup truck.

- Reduced installation time with integrated electronic expansion valve and printed circuit boards
- Volt-free float switch integration option
- Corrosion-resistant coating on outdoor unit heat exchanger
- Indoor fan coil unit with up flow or horizontal right configurations
- Heating and Cooling Fan Auto mode can be configured separately
- Dual-voltage 208-230V/1/60 Hz power supply
- Optional electric resistance heat
- Gravity-fed drain connection

© Operation with Heat Pump Allowed ☐ Electric Heater Option Only × Not Allowed

EASE OF INSTALLATION

Connected by a pair of refrigerant lines, few electrical connections, and little to no ductwork, indoor and outdoor units can be easily installed in existing spaces with minor disruption and often in a single day’s work. The compact and lightweight designs combined with flexible piping and minimal wiring allow installation with minimal time and costs.

For FTQ18/24/30/36/42PBVJU

Space required for installation (in.)
H = 19” 1/8

The installation of a secondary drain pan is necessary as shown below. Always refer to installation manuals for details.

For RZQ18/24/30/36/42PVJU(9)

Space required for installation (in.)
For double-fan outdoor modules, the requirements are similar in some cases. Always refer to installation manuals for details.
Ultra-Aire™ 70H Ventilating Dehumidifier

The Ultra-Aire 70H is the first compact, high-efficiency, whole-house ventilating dehumidifier designed to fit in tight, low-clearance applications. The unit removes up to 70 pints per day, is Energy Star® rated and provides effective air filtration (MERV 11). The UA 70H is designed to handle up to 1800 sq. ft, which makes it ideal for a small home, condo or apartment application. The unit can be tied into a forced air duct system, ducted with separate ducting or used in a freestanding application and can be installed in mechanical rooms, closets, attics, basements and crawlspaces.

The UA70H has an innovative cabinet design that easily converts to either vertical or horizontal airflow discharge which allows for easier installation in tight spaces. Flexible airflow configurations allow the UA70H to be installed in locations where other dehumidifiers don’t fit due to duct issues and size constraints. (See picture below.)

**It’s not a dream home without**

Ultra-Aire™

WHOLE HOUSE VENTILATING DEHUMIDIFIERS

1-800-533-7533 | www.Ultra-Aire.com
CSI #: 23 70 00

Ultra-Aire™ 70H Installation Options

**ULTRA-AIRE 70H ATTIC INSTALLATION**

1. The indoor air return should come from an open area on the first floor or main level of the home / building.
2. The Ultra-Aire supply can be ducted into the forced air system past the air conditioning coil. The duct connection should be perpendicular to the air flow. You may also run an independent supply directly from the dehumidifier into a large open room. Depending on the application, multiple returns and or supplies may be needed.
3. The optional six inch fresh air intake should be located at least six feet away from any exhaust ports, such as, dryer, range hood, or combustion device exhaust. Intake location should be consistent with local codes.
4. A section of flex duct or vibration absorbing duct should be located between the connections of the Ultra-Aire ductwork and the forced air system ductwork. (When ducting into the forced air systems)
5. A back draft damper should be installed when ducting into the forced air system. This prevents counter-flow of the A/C supply air through the UA 70H. A back draft damper is not needed when ducted independently.
6. If placed over a finished area, a secondary drip pan is recommended.

**ULTRA-AIRE 70H BASEMENT OR CRAWLSPACE INSTALLATION**

1. Indoor air return should come from an open area of the first or second floor.
2. The Ultra-Aire supply should be ducted into the forced air system supply beyond the air conditioning coil. The duct connection should be perpendicular to the air flow.
3. An optional eight inch tee fitting with an adjustable blade damper on the straight run may be attached at the Ultra-Aire supply. This allows for increased air flow to the basement/crawlspace during the summer months.
4. The optional six inch fresh air intake should be located at least six feet away from any exhaust ports, such as, dryer, range hood, or combustion device exhaust. Intake location must be consistent with local codes.
5. A section of flex duct or vibration absorbing duct should be located between the connections of the Ultra-Aire ductwork and the forced air system ductwork.
6. The backdraft damper prevents counter-flow of the A/C supply air through the Ultra-Aire 70H.

Please Note: Therma-Stor does not recommend drawing air from the return ducting system and discharging into the supply, because it could reduce the capacity and may cause potential counterflow through the unit. Preferred installation is to draw air from a separate intake duct located in the central part of the home. Duct the outlet air into the supply duct for distribution throughout the home. A backdraft damper prevents air from the supply duct from being pushed backward through the Ultra-Aire 70H when central (A/C) fan is on and the Ultra-Aire fan is off.
Compact ERV with easy mount wall bracket. Brings a continuous supply of fresh air into a home while exhausting an equal amount of contaminated air. The enthalpic core at the center of the unit transfers heat and moisture from the incoming air to the outgoing air. The air brought into the living area is cooled and the humidity is reduced for maximum comfort. Reduces the load on a home’s air conditioner to save on cooling costs.

**FEATURES**
- Super Compact Size
- Includes Easy-Mount Wall Bracket
- Enthalpy Core
- 4” (100mm) Duct Connection
- No Balancing Required
- Unit Can Be Installed In Any Position
- No Defrost or Drain Pan Needed
- Easy Access Service Door
- 3’ (914mm) Plug-in Power Cord
- Only 25 lbs (11 kg)
- Electrostatic Filters (washable)
- Easy Core Guide Channels For Removing Core
- Single Speed Ventilation

**ACCESSORIES**
- FTD 7 – 7 Day Digital Programmable Timer
- COM 4P – 4” Weather Hoods (1 supply & 1 exhaust)
- FEL 4 – 4” 90˚ Elbow
- CG 4 – 4” Adjustable Grille

**SPECIFICATIONS**

**CASE**
- 24 gauge galvanized steel. Baked powder coated paint, antique white. Cabinet fully insulated with 1” (25 mm) aluminum foil-face high density polystyrene foam to prevent condensation and meet the requirements of the UL 94HF.

**MOTORS**
- Two (2) German-manufactured, factory-balanced ebm™ motors with backward curved blades. Motors come with permanently lubricated sealed ball bearings to guarantee long life and maintenance-free operation. Seven (7) year warranty. Steep fan curve requires no balancing.

**CORE**
- Enthalpy core configured for efficient cross-flow ventilation. Core is 8.5” x 8.5” (216 x 216 mm) with a 8” (205 mm) depth. Cores are manufactured to withstand large temperature variations.

**FILTERS**
- Two (2) Washable Electrostatic Panel Type Air Filters, 8.5” (216mm) x 8” (203mm) x 0.125” (3mm).

**CONTROLS**
- Unit is designed to operate continuously on a single speed. See FDT 7 under accessories or contact Tech Support for possible intermittent, line-voltage options.

**SERVICEABILITY**
- Core, filters, and motors can be easily accessed through latched door. Core conveniently slides out on our new easy glide core guides. 10” (250mm) of clearance is recommended for removal of core.

**DUCT CONNECTION**
- 4” (100mm) steel duct connections with rubber gasket for easy sealing.

**WARRANTY**
- Limited 5 year on Enthalpy core, 7 year on motors, and 5 year on parts.
Dimensions & Airflow - All units feature three foot plug-in power cord with 3-prong plug.

Ventilation Performance

### Certifications and Warranty

**Certification**

This product has been thoroughly tested by ITS ETL SEMKO, a nationally recognized independent third-party testing laboratory. The North American ETL Listed mark signifies that the device has been tested to and has met the requirements of a widely recognized consensus of U.S. and Canadian device safety standards, that the manufacturing site has been audited, and that the manufacturer has agreed to a program of quarterly factory follow-up inspections to verify continued conformance.

**FCC and Industry Canada Compliance Statement**

This device complies with FCC Rules Part 15 and Industry Canada RSS-210 (Rev. 7 or 8). Operation is subject to the following two conditions:

1. This device may not cause harmful interference, and
2. This device must accept any interference, including interference that may cause undesired operation of the device.

Le present appareil est conforme aux UNR d’Industrie Canada applicables aux appareils radio exempts de licence. L’exploitation est autorisée aux deux conditions suivantes:

1. L’appareil ne doit pas produire de brouillage, et
2. L’utilisateur de l’appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d’en compromettre le fonctionnement.

The digital circuitry of this device has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in residential installations. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio and television reception. However, there is no guarantee that interference will not occur in a particular installation. If this device does cause such interference, which can be verified by turning the device off and on, the user is encouraged to eliminate the interference by one or more of the following measures:

- Re-orient or relocate the receiving antenna of the device experiencing the interference
- Increase the distance between this device and the receiver
- Connect the device to an AC outlet on a circuit different from the one that supplies power to the receiver
- Consult the dealer or an experienced radio/TV technician

WARNING: Changes or modifications to this device not expressly approved by the party responsible for compliance could void the user’s authority to operate the equipment.

**ETL/UL Warning (Safety Warning)**

CAUTION: To reduce the risk of overheating and possible damage to other equipment, do not install this device to control a receptacle, a motor-operated appliance, a fluorescent lighting fixture, or a transformer-supplied appliance.

Gradateurs commandant une lampe a filament de tungstene – afin de reduire le risque de surchauffe et la possibilite d’endommagement a d’autres materiaux, ne pas installer pour commander une prise, un appareil a moteur, une lampe fluorescente ou un appareil alimente par un transformateur.
Overview

The Arduino Micro is a microcontroller board based on the ATmega32u4 (datasheet), developed in conjunction with Adafruit. It has 20 digital input/output pins (of which 7 can be used as PWM outputs and 12 as analog inputs), a 16 MHz crystal oscillator, a micro USB connection, an ICSP header, and a reset button. It contains everything needed to support the microcontroller; simply connect it to a computer with a micro USB cable to get started. It has a form factor that enables it to be easily placed on a breadboard.

The Micro is similar to the Arduino Leonardo in that the ATmega32u4 has built-in USB communication, eliminating the need for a secondary processor. This allows the Micro to appear to a connected computer as a mouse and keyboard, in addition to a virtual (CDC serial / COM port. It also has other implications for the behavior of the board; these are detailed on the getting started page.

DT7450/DT7450C/DT7450-MIC
DUAL TEC® MOTION SENSORS

Designed for tough, commercial environments, the DT7450 Motion Sensor achieves reliable protection with improved false alarm immunity through DualCore™ signal processing. Optimum performance is achieved using K-Band microwave technology and Uniform Sensitivity Optics. The DT7450-MIC is a fully featured DualTec with integrated microphone, for listen in capabilities.

FEATURES

- **Advanced DualCore Signal Processing**
  DuaCore signal processing analyzes PIR and microwave signals through the DT7450's microcontroller. DualCore processing supports a multitude of advanced functions, including concurrent diagnostics, digital fluorescent light interference filter, digital adaptive microwave threshold, adaptive baselines, and bidirectional temperature compensation.

- **Superb Detection Through K-Band Technology**
  K-Band microwave technology delivers sharp detection without holes or weak spots. The custom made source offers pattern shaping to fill the protected area with a broad, balloon-shaped pattern which matches the PIR pattern. It also offers pattern containment to reduce the penetration of microwave energy through walls.

- **Enhanced False Alarm Prevention Features**
  The DT7450 offers more than the standard features that protect against false alarms due to RF signals, electrostatic discharge, and electrical overstress. The patented black bug guard improves white light immunity and digital adaptive microwave thresholds automatically adjust for room disturbances.

- **Self-Testing for Consistently Reliable Operation**
  Concurrent diagnostics assure optimum performance and reliability. Self-testing is performed upon power-up and at least once every hour on the PIR, microwave, PCB circuitry and temperature compensation circuitry.

- **Sturdy, Attractive Housing**
  The sleek, sturdy housing fits into a variety of building styles and blends with any room decor. ABS plastic is used for shock and impact protection. The housing offers a convenient wiring channel, knockouts for mounting and wiring, and easy access to wiring terminals.

- **DualCore Signal Processing**
  PIR and microwave signals are analyzed in the microcontroller in multiple domains, including amplitude, time, frequency and duration to provide superior false alarm immunity without compromising detection. DualCore processing not only supports alarm functions, but also advanced temperature compensation, diagnostics, and false alarm features.

- **Uniform Sensitivity Optics**
  The custom-designed Fresnel lens provides the same sensitivity for human targets at the edge of the pattern as exists directly in front of the sensor, giving the DT7450 consistent coverage throughout the protected area.

- **Digital Adaptive Microwave Thresholds**
  The DT7450 digitally adjusts its thresholds to account for room disturbances such as ceiling fans and other repetitive moving objects which are not an intrusion event. The result – excellent false alarm immunity even in “active” rooms.
DT7450/DT7450C/DT7450-MIC
DUAL TEC® MOTION SENSORS

SPECIFICATIONS

- **Range**
  - 50’ x 60’ (15 m x 18 m), 90 wide° angle
- **Alarm Relay**
  - DT7450/DT7450-MIC: Energized Form A
  - DT7450C: Energized Form C
  - 125mA, 25VDC, 20 Ohm series resistor
- **Mounting Height**
  - 7’6” (2.3 m) optimal
- **Tamper**
  - (NC) 50 mA, 24VDC
- **Power Requirements**
  - 7.5–16VDC (8.0–16VDC for UL installations)
  - DT7450: 25mA typical, 30mA max. at 12VDC
  - DT7450C: 30mA typical, 35mA max. at 12VDC
  - DT7450-MIC: 25mA typical, 33 mA Max at 12 VDC
  - AC Ripple: 3V peak-to-peak at 12VDC nominal
- **Frequencies**
  - 24.125 GHz (K-Band)
- **PIR White Light Immunity:**
  - 6,500 lux typical
- **Fluorescent Light Filter**
  - 50 Hz or 60 Hz, selectable
- **RFI Immunity**
  - 14° to 131° F (-10° to 55° C)
  - 5% – 95% relative humidity (non-condensing)
- **Self-test Intervals**
  - Microwave supervision: Continuous
  - PIR self-test: Once every hour
  - Temp. comp.: Every 30 seconds
- **Microphone Output**
  - 15V peak-to-peak max, 10 mA max
- **PIR Fields of View**
  - 22 long range
  - 12 intermediate
  - 6 lower
  - 4 look-down
- **Dimensions**
  - 4.92” x 2.94” x 1.72”
  (12.5 cm x 7.5 cm x 4.4 cm)
- **Sensitivity**
  - Low (Pulse count 2): 3-4 steps
  - High (Pulse count 1): 2-3 steps
- **Temperature Compensation**
  - Advanced Dual Slope Temperature Compensation
- **Agency Listings**
  - EN50131-1 Grade 2, Class II
  - cULus – FCC – FG
  - IC – IMQ – INCERT
  - MABISZ – NCP – NFA2P
  - SBSC – SKAFOR

Datasheet SHT7x  (SHT71, SHT75)
Humidity and Temperature Sensor IC

- Fully calibrated
- Digital output
- Low power consumption
- Excellent long term stability
- Pin type package – easy integration

Product Summary
SHT7x (including SHT71 and SHT75) is Sensirion’s family of relative humidity and temperature sensors with pins. The sensors integrate sensor elements plus signal processing in compact format and provide a fully calibrated digital output. A unique capacitive sensor element is used for measuring relative humidity while temperature is measured by a band-gap sensor. The applied CMOSens® technology guarantees excellent reliability and long term stability. Both sensors are seamlessly coupled to a 14bit analog to digital converter and a serial interface circuit. This results in superior signal quality, a fast response time and insensitivity to external disturbances (EMC).

Each SHT7x is individually calibrated in a precision humidity chamber. The calibration coefficients are programmed into an OTP memory on the chip. These coefficients are used to internally calibrate the signals from the sensors. The 2-wire serial interface and internal voltage regulation allows for easy and fast system integration. The small size and low power consumption makes SHT7x the ultimate choice for even the most demanding applications.
SHT7x is supplied on FR4 with pins which allows for easy integration or replacement. The same sensor is also available as surface mountable packaging (SHT1x) or on flex print (SHTA1).

Sensor Chip
SHT7x V4 – for which this datasheet applies – features a version 4 Silicon sensor chip. Besides a humidity and a temperature sensor the chip contains an amplifier, A/D converter, OTP memory and a digital interface. V4 sensors can be identified by the alpha-numeric traceability code on the sensor cap – see example “B2G” code on Figure 1.

Material Contents
While the sensor is made of a CMOS chip the sensor housing consists of an LCP cap with epoxy glob top on an FR4 substrate. Pins are made of a Cu/Be alloy coated with Ni and Au. The device is fully RoHS and WEEE compliant, thus it is free of Pb, Cd, Hg, Cr(6+), PBB and PBDE.

Evaluation Kits
For sensor trial measurements, for qualification of the sensor or even experimental application (data logging) of the sensor there is an evaluation kit EK-H4 available including SHT71 (same sensor chip as SHT1x) and 4 sensor channels, hard and software to interface with a computer. For other evaluation kits please check www.sensirion.com/humidity.
Overview

XBees Product Family
The XBees family of embedded RF modules provides OEMs with a common footprint shared by multiple platforms, including multipoint and ZigBee/Mesh topologies, and both 2.4 GHz and 900 MHz solutions. OEMs deploying the XBees can substitute one XBees for another, depending on dynamic application needs, with minimal development, reduced risk and shorter time-to-market.

Why XBees Multipoint RF Modules?
The XBees multipoint RF modules are ideal for applications requiring low latency and predictable communication timing. Providing quick, robust communication in point-to-point, peer-to-peer, and multipoint/star configurations, XBees multipoint products enable robust end-point connectivity with ease. Whether deployed as a pure serial replacement, simple serial communication, or as part of a more complex hub-and-spoke network of sensors, XBees multipoint RF modules maximize wireless performance and ease of development.

Drop-in Networking End-Point Connectivity
XBees OEM RF modules are part of Digi's Drop-in Networking family of end-to-end connectivity solutions. By seamlessly interfacing with compatible gateways, device adapters and extenders, XBees embedded RF modules provide developers with true beyond-the-horizon connectivity.

Features/Benefits

- 802.15.4/Multipoint network topologies
- 2.4 GHz for worldwide deployment
- 900 MHz for long-range deployment
- Fully interoperable with other Digi Drop-in Networking products, including gateways, device adapters and extenders
- Common XBees footprint for a variety of RF modules
- Low-power sleep modes
- Multiple antenna options
- Industrial temperature rating (-40° C to 85° C)
- Low-power and long-range variants available

### DNR Series

- **Input Voltage**
  - 90-264 VAC, 120-375 VDC (DNR05/10/18)
  - 85-264 VAC, 90-375 VDC (DNR30/60)

- **Input Frequency**
  - 47-63 Hz

- **Input Current**
  - See tables

- **Inrush Current**
  - 5-18 W: 10/18 A at 115/230 VAC
  - 30 W: 20/40 A at 115/230 VAC
  - 60 W: 30/60 A at 115/230 VAC

- **Power Factor**
  - EN61000-3-2, class A

- **Earth Leakage Current**
  - 0.8 mA max

- **Input Protection**
  - Internal fuse T2A, 250 VAC fitted in line

### Output

- **Output Voltage**
  - See tables

- **Output Voltage Trim**
  - See tables

- **Initial Set Accuracy**
  - ±1%

- **Minimum Load**
  - No minimum load required

- **Start Up Delay**
  - <1 s (may increase at low temperature extremes)

- **Start Up Rise Time**
  - <150 ms

- **Hold Up Time**
  - 30/130 ms at 115/230 VAC (DNR05)
  - 20/75 ms at 115/230 VAC (DNR18)
  - 20/30 ms at 115/230 VAC (DNR30)
  - 20/60 ms at 115/230 VAC (DNR60)

- **Line Regulation**
  - 5-18 W: ±1.0% max
  - 30-60 W: ±0.5% max

- **Load Regulation**
  - 5-18 W: ±2.0% max
  - 30-60 W: ±0.5% max

- **Parallel Operation**
  - Redundancy module DPM10 available for load currents up to 10 A (not with standby system), contact sales

- **Transmit Response**
  - 4% max deviation recovery to within 1% in 2 ms for a 50% load change

- **Ripple & Noise**
  - 50 mV pk-pk, 20 MHz bandwidth (may increase at low temperature extremes)

- **Overvoltage Protection**
  - Output clamps at 120-145% Vnom, auto recovery

- **Short Circuit Protection**
  - Power limited, auto recovery

### Environmental

- **Operating Temperature**
  - -20 °C to +70 °C (DNR05/10/18)
  - -40 °C to +70 °C, start up at -35 °C (DNR30/60), all units derate linearly from 60 °C (see derating curves)

- **Cooling**
  - Convection-cooled with 25mm free space all sides

- **Operating Humidity**
  - 20-95% RH, non-condensing

- **Storage Temperature**
  - -25 °C to +85 °C (DNR05/10/18)
  - -40 °C to +85 °C (DNR30/60)

- **Shock**
  - 15 g, 11 ms, X, Y & Z axis, 3 shocks/axis in both directions

- **Vibration**
  - 2 g, 10 Hz to 50 Hz, along X, Y & Z axis, 60 mins/axis, mounted on rail

### EMC & Safety

- **Emissions**
  - EN55022, level B conducted & radiated

- **Harmonic Currents**
  - EN61000-3-2, class A

- **Voltage Flicker**
  - EN61000-3-3

- **Radiated Immunity**
  - EN61000-4-3, level 3, Perf Criteria A

- **EFT/Burst**
  - EN61000-4-4, level 4, Perf Criteria A

- **Surge**
  - EN61000-4-5, installation class 3, Perf Criteria A

- **Conducted Immunity**
  - EN61000-4-6, level 3, Perf Criteria A

- **Magnetic Field**
  - EN61000-4-8, level 4, Perf Criteria A

- **Dips & Interruptions**
  - EN61000-4-11, 30% 10 ms, 60% 100 ms, 100% 5000 ms, Perf Criteria A, B, B

- **Safety Approvals**
  - EN60950-1, UL508 Pollution Degree 2, UL1310 class 2 power recognised, See note 3 & ratings table, UL6955-1 Overvoltage Category III, DNR30 & DNR60: SEMI F47, ANSI/SAI 12.12.01, Class 1, Division 2 Groups A,B,C and D

Model # HOM115GFICP

PRODUCT DESCRIPTION

The Homeline 15 Amp 1 in. Single-Pole GFCI Circuit Breaker offers protection of entire branch circuits where clamp-location shock hazards may exist, as well as overload and short-circuit protection. This unit has a thermal-magnetic tripping mechanism and is rated 10,000 AIR and 120/240 VAC.

- Homeline 15 Amp one-pole GFCI circuit breaker
- The Homeline 15 Amp one-pole GFCI circuit breaker is designed for the protection of entire branch circuits in damp locations as the breaker has a load maximum of 240 volts, a 10,000 maximum AIR
- This unit has a thermal-magnetic tripping mechanism
- Trip thermally (in an overload situation) or magnetically (under a short circuit situation)
- Thermal-magnetic tripping mechanism
- Compatible with Homeline load centers and CSED devices
- 120/240 Vac
- 10,000 AIR
- ANSI certified and UL listed
- MFG Brand Name: Square D by Schneider Electric
- MFG Model #: HOM115GFICP
- MFG Part #: HOM115GFICP

Square D by Schneider Electric Homeline 20-Amp Single-Pole GFCI Circuit Breaker
Model # HOM120GFICP

PRODUCT DESCRIPTION

The Homeline 20 Amp 1 in. Single-Pole Ground Fault Circuit Breaker is for overload and short-circuit protection of wiring. The circuit breaker has a maximum Amp interrupt rating (AIR) of 10,000 amps and a maximum load of 240 volts. It is compatible with Homeline load centers and combination service entrance devices and features a thermal/magnetic tripping mechanism.

- Homeline 20 Amp one-pole GFCI circuit breaker
- The Homeline 20 Amp one-pole GFCI circuit breaker is designed for the protection of entire branch circuits in damp locations as the breaker has a load maximum of 240 volts, a 10,000 maximum AIR
- This unit has a thermal-magnetic tripping mechanism

Eaton 20 Amp Single Pole BR Type Breaker Fireguard AFCI
Model #: BR120AFCS

PRODUCT DESCRIPTION

The Eaton Cutler-Hammer 20 Amp 1 in. Single-Pole Type BR Arc Fault Circuit Breaker is designed to provide protection from fires caused by arcing faults. The AFCI breaker meets 2002 National Electric Code (NEC) requirements for bedrooms and has a maximum load of 240 volts.

- Protects against fires caused by arcing faults
- 120/240 VAC
- ANSI certified and CSA- and UL listed

Innovative Design!

Square D QO Plug-on Neutral Load Centers and CAFI Circuit Breakers

Designed for reliability, the QO™ Plug-on Neutral CAFI Circuit Breakers connect directly to the neutral bar, providing a time- and labor-saving installation.

The QO Plug-on Neutral Advantage:

- Fewer connections — Faster installation
- No pigtails — Frees gutter space
- TIME SAVER diagnostics — Advanced trip indication technology saves time
- QO Plug-on Neutral CAFI Circuit Breaker neutral connector — Designed for reliability and ease of installation
- QO Load Center interior — Engineered for a quick Plug-on Neutral connection on every circuit

DOW POWERHOUSE™ inverter series

SPECIAL FEATURES

- Grid Tie certified
- High efficiency
- Independent DC inputs
- Independent MPPT tracking circuits
- Small and lightweight for ease of installation
- Connection covered (no unreliable fuses)
- 10-year warranty
- Outdoor rated
- Front panel LCD display monitoring
- Inverter easily removable from Wiring Box

POWERHOUSE SAFETY

CSI #: 26 27 00

This page is for review purposes only.
### DOW POWERHOUSE™ inverter series

**DC Input**
- CSI #: 26 27 00
- Number of String Inputs: 2, 3, 4, 2
- MPPT Operating Voltage Range: 300–400 Vdc
- Maximum Operating Voltage: 550–600 Vac
- Maximum Peak Power: 3725 W
- Maximum Input DC Current: 16 A
- Minimum Startup Voltage: 170 Vdc

**AC Output**
- Maximum Continuous Output Power: 3500 W
- Maximum Output Current: 16 Arms
- Output Voltage Range: 240 Vrms (216...260 Vrms) per IEEE 1547
- Frequency: 60 Hz (59.3...60.5 Hz)
- CE Certified Efficiency: 94.5%

**Protection**
- Disconnect Switch: Integrated in Wiring Box — disconnects both AC & DC
- Anti-Islanding Protection: Per IEEE 1547
- Backfeed Protection: Internal Blocking Circuit
- Grounding Popularity: Negative DC Grounding
- Ground Fault Protection: Yes
- Thermal Protection: Yes
- Reverse Polarity Protection: Yes

**Mechanical**
- Dimensions (H x W x D): 21.0 x 12.2 x 5.9 inches
- Weight — Inverter plus Wiring Box: 47 lbs. / 21.5 kg
- Weight — Inverter Only: 41 lbs. / 18.5 kg
- Enclosure — Inverter: IP65 Rated & NEMA-3R
- Enclosure — Wiring Box: IP54 Rated
- Visual Display: Backlit LCD — 2-line, 16 Character

**Environmental**
- Cooling: Convection — No Fan
- Temperature (at Full Power): -20° to +40°C
- Power Derating: above 40°C

**Other**
- ETS: FCC Part 25 Class B
- Safety Compliance: UL, IEC, CEE

**NOTES**
1. Each input operates with an independent MPPT tracker.
2. Inverter will operate up to 550 Vdc and will not be damaged with an input less than 600 Vdc.
3. Derate linearly from 3725 W at 170 Vdc to 3300 W at 150 Vdc.
4. Derate linearly from 5300 W at 250 Vdc to 3300 W at 150 Vdc.
5. An open circuit voltage exceeding 170 Vdc is required to start the inverter.
6. Derate linearly from 3500 W at 170 Vdc to 3100 W at 150 Vdc.
7. Derate linearly from 5000 W at 250 Vdc to 3100 W at 150 Vdc.
8. A 6.3 inch depth including mounting bracket
9. Inverter will automatically reduce power if ambient temperature exceeds specification.
10. Refer to system warranty for additional details.

technical specifications

Works like any other shingle but harder. The DOW POWERHOUSE™ Solar Shingle System is designed to install like any other asphalt shingled roof but provides the additional benefit of generating clean, renewable energy for homes.

DOW POWERHOUSE™ Solar Shingle System delivers:

**DUAL FUNCTIONALITY**
Projects as a roofing material and provides renewable energy.

**INTEGRATED AESTHETICS**
A building-integrated photovoltaic solution for asphalt composition shingle roofs that installs flush with asphalt shingles.

**EASE OF INSTALLATION**
Nails directly to the roof deck, just like traditional asphalt shingles.

**EXCELLENCE GUARANTEED**
Withstands sun exposure, extreme temperatures, wind, hail and other inclement weather.

safety and performance certifications

**UNDERWRITERS LABORATORY**
- UL 703 Flat Plate Photovoltaic Modules & Panels
- UL 790 Standard Test Methods for Fire Tests of Roof Coverings
- UL 1897 Uplift Tests for Roof Covering Systems

**INTERNATIONAL CODE COUNCIL EVALUATION SERVICE**
- 2006 and 2009 International Building Code (IBC)
- 2006 and 2009 International Residential Code

**INTERNATIONAL ELECTROTICAL COMMISSION**
- IEC 61646 (Thin film terrestrial photovoltaic (PV) modules – Design qualification and type approval)

Get Great Outdoor Protection with 2008 NEC® Code-Compliant SmartlockPro® Weather-Resistant GFCI Receptacles

When it comes to outdoor GFCI protection, it's smart to go with a pro, SmartlockPro Weather-Resistant (WR) GFCI Receptacles. The new GFCIs offer all the advantages of Leviton's popular brand, plus they are UL Listed weather resistant to comply with Section 406.8 of the 2008 NEC Code. Built with UV stabilized engineering thermoplastic for high cold impact resistance, the WR GFCI devices feature stainless steel straps and mounting screws, as well as conformally coated PC board to protect critical components from moisture. For an even higher level of safety, the GFCIs are available in tamper-resistant (TR) versions that help protect children from the danger of inserting foreign objects into receptacles. Rain or shine, Leviton offers products to meet all your outdoor needs, including a selection of raintight-while-in-use covers.

Important: Covers must be used with WR GFCI receptacles in damp or wet locations per Section 406.8 of the NEC Code.

Applications:
- Ideal in damp locations that are protected from the weather and wet locations that are subject to water saturation.
- Code-compliant solution for patio, deck and pool areas.
- Designed for residential and commercial applications.

Section 406.8 of the 2008 NEC® Code mandates all non-locking 15A and 20A receptacles in damp or wet locations should be listed weather resistant.
Weather-Resistant GFCIs

- Professional grade lockout action, dead-face design and end-of-life indication offer superior ground fault protection
- Stainless steel strap and mounting screws
- Stainless steel terminal screws with nickel plated steel nut plates
- Stabilized engineering thermoplastic with high cold impact resistance
- Informally coated PC board to protect critical components from moisture
- Meets UL 498 requirements for weather-resistant receptacles

Certification Standards:
- Listed (File #E-48380)
- A Certified (File #LR-57811)
- Meets UL 498 requirements for weather-resistant receptacles

Tamper-Resistant Versions:
- TR symbol on residential receptacles assures they meet Section 406.11 of the NEC Code mandating that all 15A and 20A receptacles installed in dwelling units be listed as tamper resistant
- Shutter mechanism inside the receptacle blocks access to the contacts unless a two-prong plug is inserted, helping ensure foreign objects will be locked out

Leviton’s New USB Charger/Tamper-Resistant Receptacle Delivers More Charging Power in Less Time!

Leviton’s USB Charger/Tamper-Resistant Receptacle offers a ground-breaking 2.1A of charging power and a 15A/125V Tamper-Resistant Receptacle. This state-of-the-art device has the ability to charge up to two electronic devices simultaneously utilizing the USB Ports, leaving the receptacle free for additional power needs. The USB Ports are Type A, 2.0/3.0 and are controlled by a smart chip which recognizes and optimizes the charging power of your device. This means you can spend less time charging your device and more time enjoying it! Leviton’s USB Charger/Tamper-Resistant Receptacle is ideal for charging tablets*, smart and mobile phones, e-readers and much more.

Strategically designed with two vertical USB Ports, the Leviton USB Charger/Tamper-Resistant Receptacle allows additional space for maneuvering of charging cords, reduces stress on the cables while charging and provides an aesthetically pleasing design. Our device is engineered to fit in a standard wallbox, use a standard wallplate and can be multi-ganged with another Leviton USB Charger/Tamper-Resistant Receptacle or any standard Leviton wiring device. The value-added features of Leviton’s Tamper-Resistant Receptacle provides the safe and superior device you have come to expect from an industry leader like Leviton!

Compatibility

The Leviton USB Charger/Tamper-Resistant Receptacle is compatible with a wide range of electronic devices including, but not limited to, the following:

- iPad®
- iPhone®
- iPod®
- Tablets
- Mobile Phones
- Blackberry®, Android Phones
- Galaxy Tab™
- Nintendo 3DS™
- PlayStation® Vita
- Bluetooth™ Headsets
- Digital Cameras
- Kindle™, Nook e-readers
- GPS
- Much More

*USB Ports are not intended to charge two tablets simultaneously.

If the devices combined power requirements exceed the power capacity of the USB Ports, the charger will automatically shut down to protect your devices. To charge two tablets use the high power USB Port and the Tamper-Resistant Receptacle.
USB Charger/Tamper-Resistant Receptacle

**USB Ports** with a combined power of 2.1A. More charging capacity means better charging capability.

**High Power Port** is ideal for charging Tablets and other high draw devices.

**Compact Design** fits in a standard wallbox, is compatible with standard wallplates and can be multi-ganged with other standard Leviton devices.

**Strategic Placement** of ports positioned vertically provides more space for maneuvering and reduces stress on USB cables.

**Back and Side Wired** for easy installation.

**Charges Smarter** with the addition of a smart chip designed for recognizing and optimizing the charging requirements of your device.

**Tamper-Resistant** NEC® Compliant shutter mechanism blocks access to contacts from most foreign objects for improved safety.

**Perfect for Residential and Light Commercial Applications:**
- Kitchens
- Bedrooms
- Home Offices
- Hotels
- Airports
- Office Cubicles
- College Dorm Rooms

The Leviton USB Charger/Tamper-Resistant Receptacle is Underwriters Laboratories (UL) listed 498 and 1310 and meets all NEC® Tamper-Resistant Requirements. It is backed by a 5 year limited warranty.

Commercial Electric 6 in. Recessed White LED Trim-CER6730WH at The Home Depot

CSI #: 26 51 13

Product Overview

Adjustable Lamp Head: No
Aperture width (in.): 6.0
Assembled Depth (in.): 7.5 in
Assembled Height (in.): 3.89 in
Assembled Width (in.): 7.5 in
Certifications and Listings: 1-UL Listed,ETL Listed
Fixture Finish: White
Fixture finish family: White
Fixtures/tracks material: Aluminum
Light Source: LED

The Commercial Electric 6 in. Recessed LED Trim with clean and elegant design is ideal for glare free lighting in any room of the house. This ETL classified high efficiency dimmable Trim has received Energy Star Certification for year-round energy savings. Compatible with dimmer switch for different illumination needs and increased energy saving. This LED Trim is for use with 6 in. and 8 in. IC and Non-IC recessed housings and will retrofit 5 in. and 6 in. incandescent housings to energy saving LED down lights. Reduce energy consumption to 11 watt LED - comparable to BR30/65 watt incandescent bulb. Rated for wet location make it applicable for shower and exterior application.

Product Details

- White recessed LED trim
- For use with 5 in. and 6 in. IC or Non-IC recessed housings (housings not included)
- Dimming range between 10% to 100% and compatible with most household dimmers
- Rated for wet location and certified airtight per ASTM E283-04
- Can be used for CA title 24/high efficacy compliance
- 65 watt bulb equivalent light output - 11 watt energy used
- IC rated for direct contact with insulation
- Save on bulb replacement up to 35,000 hours lamp life
- Medium base socket adapter included
- Retracts 5 in. and 6 in. incandescent housings to energy saving LED down lights
- Designed to install in other incandescent housing by other major brands, please refer to instruction sheet for list of additional compatible housing
- MFG Model #: CER6730WH
- MFG Part #: CER6730WH

PRODUCT OVERVIEW

The Sadie Collection 1-Light 79 in. Hanging Metal Satin Nickel Ceiling Pendant includes a Classic Opal white glass shade that diffuses light output and a satin nickel base finish that can help create a casual look in your room.

- Includes a Classic Opal white glass shade that diffuses light output
- Metal construction
- Uses 1 candelabra base bulb, 60 watts maximum (sold separately)
- Ceiling-mounted, adjustable hanging length design
- UL listed
- Includes hardware for easy installation
- MFG Model #: 21394-010
- MFG Part #: 21394-010

**PRODUCT OVERVIEW**

The Home Decorators Collection Sydney 3-Light Bowl Pendant is finished in gleaming polished nickel. The unique bowl is etched white glass, which completes the transitional look. Use this beautiful pendant to transform your space.

- Elegant glass and durable steel construction for lasting beauty
- Uses three 100-watt medium base bulbs, sold separately
- Additional chain and wire included for adjustable hanging length up to 92-1/2 in. max
- ETL listed for indoor locations
- Instructions included for assembly and installation
- MFG Model # : 27184
- MFG Part # : 27184

**SPECIFICATIONS**

The LED 3 in. Recessed Matte White Baffle Kit from Lithonia Lighting makes shopping for and installing recessed downlighting easy by conveniently including a 3 in. remodel housing, decorative trim with integrated LEDs, wire nuts and a cutting stencil all in one box. The energy efficient integrated LEDs operate for 28,000 hours without maintenance, which means you never have to buy or change a bulb. The kit can be converted to new construction using hanger bars and construction pan accessories.

- Energy Star qualified LED technology offers maximum energy efficiency and maintenance-free operation
- Attached j-box has 3 knockouts for branch wiring and a captive door for ease of wiring
- 3 in. matte white baffle trim evenly distributes light while reducing glare
- Housing is constructed of durable aluminum and is powder coat painted to prevent rust
- 3000K LEDs produce light output of 400 lumens (45-Watt PAR20 equivalent) and are fully dimmable down to 10%
- IC/Non-IC remodel airtight housing includes 3 remodel clips for easy installation in existing plaster, sheet rock or mechanical ceilings
- CSA certified to US and Canadian wet location safety standards and California T24 compliant
- Easily converts to new construction installation using hanger bars and new construction pan accessories
- MFG Model #: LK3BPMW LED M4
- MFG Part #: 213EEL

**PRODUCT OVERVIEW**

Adjustable Lamp Head: No
Aperture width (in.): 3.0
Assembled Depth (in.): 10 in
Assembled Height (in.): 4.5 in
Assembled Width (in.): 7.75 in
Certifications and Listings: 1-UL Listed, CSA Listed, IC Rated
ENERGY STAR Certified: No
Fixture Finish: Matte White
Fixture finish family: White
Fixture Track Material: Aluminum
Housing depth (in.): 5.25
Light Bulb Base Type: Bi-Pin
Light Source: LED
Manufacturer Warranty: 3 year
New Construction or Remodel: New Construction and Remodel
Number of Housings Included: 1.0
Product Weight (lb.): 3
Recommended bulb type: LED
The LED 4 in. Recessed Matte White Baffle Kit from Lithonia Lighting makes shopping for and installing recessed downlighting easy by conveniently including a 4 in. remodel housing, decorative trim with integrated LEDs, wire nuts and a cutting stencil all in one box. The energy efficient integrated LEDs operate for 28,000 hours without maintenance, which means you never have to buy or change a bulb. The kit can be converted to new construction using hanger bars and construction pan accessories.

- Energy Star qualified LED technology offers maximum energy efficiency and maintenance-free operation
- Attached box has 3 knockouts for branch wiring and a captive door for ease of wiring
- 4 in. matte white baffle trim evenly distributes light while reducing glare
- Housing is constructed of durable aluminum and is powder coat painted to prevent rust
- 3000K LEDs produce light output of 400 lumens (50-watt incandescent flood equivalent) and are fully dimmable down to 10%
- IC/Non-IC remodel airtight housing includes 3 remodel clips for easy installation in existing plaster, sheet rock or mechanical ceilings
- CSA certified to US and Canadian wet location safety standards and California Title 24 compliant
- Easily converts to new construction installation using hanger bars and construction pan accessories
- MFG Model #: LK4BPMW LED M4
- MFG Part #: 213EEN

FEATURES & SPECIFICATIONS

INTENDED USE — Our recessed LED module is the most economical means to create a well lit environment with exceptional energy efficiency and near zero maintenance. Great for retrofit into existing downlight cans or new construction and remodel applications. Unique torsion spring and friction clip retention allows fitment into nearly 100% of installed cans. The LED module maintains at least 70% light output for 50,000 hours.

CONSTRUCTION — Aluminum die cast reflector with deep baffle configuration for reduced glare. Combined LED and driver printed circuit board attached. Inner reflector cone funnels light through the pressed-in diffused lens.

OPTICS — Diffused lens at end of mixing chamber to provide even light distribution for general illumination, equivalent to 65W BR30 lamp.

ELECTRICAL SYSTEM — Center 2 Edge™ (patent pending) technology created for a single point source. Primary power disconnect provided for simple connection to a dedicated LED connector in the housing.

Dimming down to 15%. For compatible dimmers, refer to Compatible Dimmers Chart.

Standard input wattage is 8.9 watts, 70 lumens per watt; equivalent to 65-watt incandescent.

*Actual wattage may differ by +/- 5% when operating at 120V +/- 10%.

INSTALLATION — Suitable for installation in standard and shallow-height rough-in sections.

E26 socket adapter and splice kit ships standard. This enables easy installation or permanent conversion to an LED source for Title 24 compliance.

Twin torsion springs ensure easy installation.

Friction clips included to allow fitment into cans without torsion brackets from an inside diameter of 6.0” to 7.0”.

LISTINGS — CSA certified to US and Canadian safety standards. ENERGY STAR® qualified; California T24 compliant. Wet location listed for indoor use only. US 6 inch, CA 7 inch. ASTM E283 for Air-Tight (with IC housing).

Note: Specifications subject to change without notice.

PATENTS PENDING.

++ Must have at least 60W on dimmer circuit or 4 P Series LED downlighting modules.
FEATURES & SPECIFICATIONS

INTENDED USE
Provides task or accent illumination in residential and light commercial applications. Ideal for use under cabinets offering shadow-free lighting in kitchens and work areas, in bookcases, display cabinets or above cabinets setting a warm, inviting atmosphere in the kitchen.

ATTRIBUTES
Rugged post painted low profile housing with snap on/off hinged service tray for quick installation and wiring. Shatter-resistant, acrylic white diffuser provides soft widespread illumination with zip-lock design for easy lamp access, cleaning and superior retention. Separate snap on/off service tray for easy maintenance. Available in four lengths, comes standard with on/off rocker switch.

Utilizes linear T8 lamp for energy efficiency, superior color rendering and long life (not included).

Standard with electronic ballast (120 volt, 60Hz) ensures no flickering and quiet operation without interfering with other home electronics. Use with non-dimmable switches only.

All mounting hardware included.

LISTING
CUL listed to US and Canadian safety standards and suitable for damp locations. ENERGY STAR® qualified.

WARRANTY
Guaranteed for two years against mechanical defects in manufacture.

Exterior Improvements
The K100, Green Roof Drip Irrigation Kit is a custom designed kit that contains all the parts needed included a battery operated timer to cover a roof garden of up to 250 square feet. This drip irrigation kit includes 100' of 1/4" drip line with .5 GPH drip emitters spaced every 9" and 25 pressure-compensating drip emitters with flow rates of .3 GPH (gallons per hour). The K100 Drip Irrigation Kit also includes 100' of high quality 1/2" drip irrigation tubing and 50' of 1/4" micro tubing to water up to 100 plants including a few rows of vegetable garden.

Drip irrigation is the slow application of water directly to the plants' root zone in a predetermined pattern, resulting in reduced water loss to sun and wind and no water wasted on non-growth areas. The root zone is maintained at its ideal moisture level, combining the proper balance of water and air for a very efficient irrigation system.

One of the most important features of a drip irrigation system is the creation of a totally new and more favorable root zone environment within the planting. Drip irrigation sustains this environment by using low flow rates to maintain constant soil moisture levels. This encourages better growth and disease resistance by reducing plant stress.

Note: The pressure regulator (included) is used to lower the incoming pressure to the suggested operating pressure of 25 PSI, which is within the range of recommended pressures for a drip system.

Suggestion in connecting the 1/2" compression drip fittings. To install the 1/2" compression fittings, cut the drip tubing with a hand pruner, being careful to keep dirt from entering the line. Hold the compression fitting in one hand and the drip tubing in the other and force the drip tubing into the fitting by wiggling it from side to side. Make sure that the drip tubing is pushed into the compression fitting for about 1/2 to 5/8 of an inch for a very tight fit. No glue or clamps are required.

**Installation for K100**

This drip irrigation kit has all the parts needed to start the system connecting to a faucet. The Drip Store also includes instructions on how to start the system from a PVC pipe or a pipe thread.

Starting the irrigation system from a faucet:
- To automate the system, first connect the battery-operated timer (model C001) to the faucet.
- Connect the 3/4" FHT x MHT backflow device (model AD15) to the controller or to the faucet if not using a controller.
- Connect the 3/4" FHT x MHT filter (model F300) to the backflow device if used, or directly to the controller male outlet or faucet.
- Connect the 3/4" FHT x MHT pressure regulator (model AD13) to the filter.

Optional: Starting the irrigation system from a PVC pipe:
- Glue to a 3/4" PVC pipe a PVC male adapter (model P357) (not included).
- Use the 3/4" MHT x MHT nipple (model A010) to connect to the pipe thread making sure to use 3-5 rounds of Teflon tape.
Green Roof Drip Irrigation Kit

3. Connect the 3/4" FHT x MHT battery-operated controller (model CD01) (not included) to the nipple.
4. Connect the 3/4" FHT x MHT backflow device (model AD15) to the controller, or to the faucet.
5. Connect the 3/4" FHT x MHT filter (model F300) to the backflow device, if used, or directly to the controller male outlet or faucet.
6. Connect the 3/4" FHT x MHT 25 PSI pressure regulator (model AD13) to the filter.

Steps to connect all other components:

1. To the 3/4" FHT x MHT pressure regulator connect the 3/4" FHT swivel adapter (model LF503). To the adapter connect the poly tubing by wiggling and forcing the drip tubing into the compression side of the adapter and lay out the drip tubing in the green roof area, make sure to have the 1/2" main line along the wall. The 1/2" drip tubing (model T003) is used as the main line to deliver the water to the plants.
2. Use the 1/2" elbow (model LF007) as needed.
3. Use 1/2" coupling .700 O.D. (model LF001) to connect additional 1/2" drip tubing or for repair.
4. Use the 1/2" tee (model LF005) to split the 1/2" drip tubing if needed.
5. Make sure that the end of the drip tubing is near the drainage. Turn the water on and flush the line, and then close the end of the 1/2" drip tubing using the hose end (model A006).
6. Use the 1/4" micro tubing (model T009) to extend the drippers to the plant boxes or to the pots that are far from the 1/2" drip irrigation tubing. Insert the drip emitter at the end of the 1/4" micro tubing and secure with a stake or use the 1/4" drip line to loop along the planter. If you use the 1/4" drip line (T051) it should be installed every 6"-8" between the line.
7. Use the 1/4" barb (model SF001) to connect the 1/4" micro tubing or the 1/4" drip line to the 1/2" drip tubing. To connect the 1/4" micro tubing or the 1/4" drip line to the 1/2" drip tubing punch a hole in the 1/2" drip hose using the punch (model A019) and insert the 1/4" barb, then connect the 1/4" micro tubing to the barb.

To water a diverse selection of plant sizes such as shrubs, bulbs and vegetable plants, the option below can be utilized:

Layout Option: For maximum system expansion using a single water source, and to better control the system’s total flow rate, use .5 GPH drip emitters (gallons per hour). We recommend using drip emitters of the same flow rate to resolve the difficulty of compensating for the sizes and types adjust the amount of water applied to larger or thirstier plants by simply adding more drip emitters per plant. For K025

- Use the punch (model A019) to punch holes in the 1/2" drip tubing for the insertion of the drippers and 1/4" fittings if needed.
- Use goof plugs (if needed) (model SF007) to repair small holes in the 1/2" drip tubing. The goof plug may also be used to close the end of the 1/4" micro tubing.

How much time to water: Turn the water on for 5 to 10 minutes, and check the system. If you need less or more water adjust the irrigation time, as needed. Program the irrigation controller for about 2 to 4 minutes less than the time it took you to test the system. Run the system every one or two days, depending on your location and the soil type. After a week or two check the pots, soil, the health of the plants, and adjust the irrigation time, as needed.

- Winterizing Your Irrigation System
- Drip irrigation tubing head loss
- Maximum recommended drip tubing length (in feet) on flat terrain with PC dripper

For K025

WALL MOUNTED SYSTEMS

- Standard panels are manufactured with 3, 4 or 6 inch depths
- Accommodates deeper rooted plants like vegetables and grasses
- Stainless steel or aluminum—for zero expansion or contraction—unlike plastic
- 15-year minimum product warranty with potential lifetime warranty
- Patented design allows free water flow/drainage and unlimited root migration
- No root rot or wasted irrigation
- Simple mounting system for any application
- Custom manufacturing and details allow for 100% design flexibility

END OF TABLE OF CONTENTS
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Work covered by the Documents.
   2. Specification formats and conventions.

A. This set of documents, including the Drawings, Specifications, and other data provided, is an incomplete representation of the project. Pricing the project using these documents will result in an estimate that may be more or less than the price for the project when the documents are complete. Commencing or pursuing construction activities using these documents, including ordering of materials or systems, is not permitted.

1.02 WORK COVERED BY CONTRACT DOCUMENTS

A. Project Identification: ECOHABITAT, a project of the Stephens Institute of Technology.

B. Owner: Board of Trustees, Stevens Institute of Technology.

C. The Work consists of the following:
   1. The Work includes a single-family home, newly-constructed on a portable frame, designed for highway transport in 2 main sections, and for reassembly on another site. Work includes structure, interior and exterior finishes, fixtures, appliances, and electrical, mechanical, and plumbing systems. Work also includes some exterior work that is also transportable, and which serves to complete the utility systems and provide access to the home.
   2. The Owner desires to have a minimal impact on the environment resulting from this Work, and therefore has established a goal of recycling 50-percent of the demolition and construction waste that is removed from the site.

1.03 SPECIFICATION FORMATS AND CONVENTIONS

A. Specification Format: The Specifications are organized into Divisions and Sections using the 50-division format and CSI's "MasterFormat 2010 Update" numbering system.

PART 2 - PRODUCTS (NOT USED)

PART 3 - EXECUTION (NOT USED)
PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes steel pipe and tube railings, including galvanized steel pipe railings.

B. Related Sections include the following:
1. Division 06 Section "Rough Carpentry" for wood blocking for anchoring railings.

1.03 PERFORMANCE REQUIREMENTS

A. Structural Performance: Provide railings capable of withstanding the effects of gravity loads and the following loads and stresses within limits and under conditions indicated:
1. Handrails:
   a. Uniform load of 50 lbf/ft. (0.73 kN/m) applied in any direction.
   b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
   c. Uniform and concentrated loads need not be assumed to act concurrently.
2. Top Rails of Guards:
   a. Uniform load of 50 lbf/ft. (0.73 kN/m) applied horizontally and concurrently with 100 lbf/ft. (1.46 kN/m) applied vertically downward.
   b. Concentrated load of 200 lbf (0.89 kN) applied in any direction.
   c. Uniform and concentrated loads need not be assumed to act concurrently.
3. Infill of Guards:
   a. Concentrated load of 50 lbf (0.22 kN) applied horizontally on an area of 1 sq. ft. (0.093 sq. m).
   b. Infill load and other loads need not be assumed to act concurrently.

1.04 SUBMITTALS

A. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
1. For installed products indicated to comply with design loads, include structural analysis data signed and sealed by the qualified professional engineer responsible for their preparation.

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain each type of railing through one source from a single manufacturer.

B. Welding: Qualify procedures and personnel according to the following:
1. AWS D1.1, "Structural Welding Code--Steel".
1.06 PROJECT CONDITIONS

A. Field Measurements: Verify actual locations of walls and other construction contiguous with railings by field measurements before fabrication and indicate measurements on Shop Drawings.
   1. Established Dimensions: Where field measurements cannot be made without delaying the Work, establish dimensions and proceed with fabricating railings without field measurements. Coordinate wall and other contiguous construction to ensure that actual dimensions correspond to established dimensions.
   2. Provide allowance for trimming and fitting at site.

1.07 COORDINATION AND SCHEDULING

A. Coordinate installation of anchorages for railings. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors, that are to be embedded in concrete or masonry. Deliver such items to Project site in time for installation.

B. Schedule installation so wall attachments are made only to completed walls. Do not support railings temporarily by any means that do not satisfy structural performance requirements.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Steel Pipe and Tube Railings:
      a. Pisor Industries, Inc.
      b. Sharpe Products.
      c. Wagner, R & B, Inc.; a division of the Wagner Companies.

2.02 METALS, GENERAL

A. Metal Surfaces, General: Provide materials with smooth surfaces, without seam marks, roller marks, rolled trade names, stains, discolorations, or blemishes.

B. Brackets, Flanges, and Anchors: Cast or formed metal of same type of material and finish as supported rails, unless otherwise indicated.

2.03 STEEL AND IRON

A. Tubing: ASTM A 500 (cold formed).

B. Pipe: ASTM A 53/A 53M, Type F or Type S, Grade A, Standard Weight (Schedule 40), unless another grade and weight are required by structural loads.
   1. Provide galvanized finish for exterior installations and where indicated.

C. Castings: Either gray or malleable iron, unless otherwise indicated.
   1. Gray Iron: ASTM A 48/A 48M, Class 30, unless another class is indicated or required by structural loads.
   2. Malleable Iron: ASTM A 47/A 47M.
2.04 FASTENERS
A. Provide plated steel fasteners complying with ASTM B 633, Class Fe/Zn 25 for electrodeposited zinc coating.

B. Fasteners for Anchoring Railings to Other Construction: Select fasteners of type, grade, and class required to produce connections suitable for anchoring railings to other types of construction indicated and capable of withstanding design loads.

C. Fasteners for Interconnecting Railing Components:
   1. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless otherwise indicated.
   2. Provide concealed fasteners for interconnecting railing components and for attaching them to other work, unless exposed fasteners are unavoidable or are the standard fastening method for railings indicated.
   3. Provide tamper-resistant flat-head machine screws for exposed fasteners, unless otherwise indicated.

D. Anchors: Provide torque-controlled expansion anchors, fabricated from corrosion-resistant materials with capability to sustain, without failure, a load equal to six times the load imposed when installed in unit masonry and equal to four times the load imposed when installed in concrete, as determined by testing per ASTM E 488 conducted by a qualified independent testing agency.

2.05 MISCELLANEOUS MATERIALS
A. Welding Rods and Bare Electrodes: Select according to AWS specifications for metal alloy welded.

B. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.06 FABRICATION
A. General: Fabricate railings to comply with requirements indicated for design, dimensions, member sizes and spacing, details, finish, and anchorage, but not less than that required to support structural loads.

B. Assemble railings in the shop to greatest extent possible to minimize field splicing and assembly. Disassemble units only as necessary for shipping and handling limitations. Clearly mark units for reassembly and coordinated installation. Use connections that maintain structural value of joined pieces.

C. Cut, drill, and punch metals cleanly and accurately. Remove burrs and ease edges to a radius of approximately 1/32 inch (1 mm), unless otherwise indicated. Remove sharp or rough areas on exposed surfaces.

D. Form work true to line and level with accurate angles and surfaces.

E. Fabricate connections that will be exposed to weather in a manner to exclude water. Provide weep holes where water may accumulate.

F. Cut, reinforce, drill, and tap as indicated to receive finish hardware, screws, and similar items.
G. Connections: Fabricate railings with welded connections, unless otherwise indicated.

H. Welded Connections: Cope components at connections to provide close fit, or use fittings designed for this purpose. Weld all around at connections, including at fittings.
   1. Use materials and methods that minimize distortion and develop strength and corrosion resistance of base metals.
   2. Obtain fusion without undercut or overlap.
   3. Remove flux immediately.
   4. At exposed connections, finish exposed surfaces smooth and blended so no roughness shows after finishing and welded surface matches contours of adjoining surfaces.

I. Form changes in direction as follows:
   1. By inserting prefabricated flush-elbow fittings.

J. Close exposed ends of railing members with prefabricated end fittings.

K. Provide wall returns at ends of wall-mounted handrails, unless otherwise indicated. Close ends of returns unless clearance between end of rail and wall is 1/4 inch (6 mm) or less.

L. Brackets, Flanges, Fittings, and Anchors: Provide wall brackets, flanges, miscellaneous fittings, and anchors to interconnect railing members to other work, unless otherwise indicated.
   1. At brackets and fittings fastened to plaster or gypsum board partitions, provide fillers made from crush-resistant material, or other means to transfer wall loads through wall finishes to structural supports and prevent bracket or fitting rotation and crushing of substrate.

M. Provide inserts and other anchorage devices for connecting railings to concrete or masonry work. Fabricate anchorage devices capable of withstanding loads imposed by railings. Coordinate anchorage devices with supporting structure.

2.07 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Provide exposed fasteners with finish matching appearance, including color and texture, of railings.

2.08 STEEL AND IRON FINISHES

A. Galvanized Railings:
   1. Hot-dip galvanize steel and iron railings, including hardware, after fabrication.
   2. Comply with ASTM A 123/A 123M for hot-dip galvanized railings.

B. Fill vent and drain holes that will be exposed in the finished Work, unless indicated to remain as weep holes, by plugging with zinc solder and filing off smooth.

C. For galvanized railings, provide hot-dip galvanized fittings, brackets, fasteners, sleeves, and other ferrous components.

D. For non-galvanized steel railings, provide non-galvanized ferrous-metal fittings, brackets, fasteners, and sleeves, except galvanize anchors to be embedded in exterior concrete or masonry.
PART 3 - EXECUTION

3.01 EXAMINATION

   A. Examine plaster and gypsum board assemblies, where reinforced to receive anchors, to verify that locations of concealed reinforcements have been clearly marked for Installer. Locate reinforcements and mark locations if not already done.

3.02 INSTALLATION, GENERAL

   A. Fit exposed connections together to form tight, hairline joints.

   B. Perform cutting, drilling, and fitting required for installing railings. Set railings accurately in location, alignment, and elevation; measured from established lines and levels and free of rack.

      1. Do not weld, cut, or abrade surfaces of railing components that have been coated or finished after fabrication and that are intended for field connection by mechanical or other means without further cutting or fitting.
      2. Set posts plumb within a tolerance of $\frac{1}{16}$ inch in 3 feet (2 mm in 1 m).
      3. Align rails so variations from level for horizontal members and variations from parallel with rake of steps and ramps for sloping members do not exceed $\frac{1}{4}$ inch in 12 feet (5 mm in 3 m).

   C. Adjust railings before anchoring to ensure matching alignment at abutting joints.

   D. Fastening to In-Place Construction: Use anchorage devices and fasteners where necessary for securing railings and for properly transferring loads to in-place construction.

3.03 RAILING CONNECTIONS

   A. Welded Connections: Use fully welded joints for permanently connecting railing components. Comply with requirements for welded connections in Part 2 "Fabrication" Article whether welding is performed in the shop or in the field.

   B. Expansion Joints: Install expansion joints at locations indicated but not farther apart than required to accommodate thermal movement. Provide slip-joint internal sleeve extending 2 inches (51 mm) beyond joint on either side, fasten internal sleeve securely to 1 side, and locate joint within 6 inches (152 mm) of post.

3.04 ADJUSTING AND CLEANING

   A. Galvanized Surfaces: Clean field welds, bolted connections, and abraded areas and repair galvanizing to comply with ASTM A 780.

3.05 PROTECTION

   A. Protect finishes of railings from damage during construction period with temporary protective coverings approved by railing manufacturer. Remove protective coverings at time of Substantial Completion.

   B. Restore finishes damaged during installation and construction period so no evidence remains of correction work. Return items that cannot be refinished in the field to the shop; make required alterations and refinish entire unit, or provide new units.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
A. Submittals: Product Data

PART 2 - PRODUCTS

2.01 MATERIALS
A. Sheathing nails: 8d common nails
B. Frame screws: 4”
C. Simpson Strong-Tie Company Inc.
   1. Column Caps: Simpson CCCQ-SDS2.5, Simpson CCTQ-SDS2.5
   2. Source: Simpson Strong-Tie Company Inc.
D. Simpson Strong-Tie Company Inc.
   1. Face Mount Hangers: Simpson LUC210Z
   2. Source: Simpson Strong-Tie Company Inc.
E. Simpson Strong-Tie Company Inc.
   1. Hurricane Ties: Simpson H1
   2. Source: Simpson Strong-Tie Company Inc.

PART 3 - EXECUTION

3.01 INSTALLATION
A. Provide 2”x6” blocking at all free edges.
B. All sill plates shall be p.t. and anchored to foundation walls with 1/2” diameter headed anchor bolts (ASTM F1554) at 4’-0” o.c. and within 12” of all sill plate slices (min. 7” embed.).
C. Joist Hangers shall be a minimum of 18 gauge steel.
D. Built-up beams less than 8” deep shall be spiked together with two (2) 16d nails at 16” o.c.
E. Built-up beams greater than 8” deep shall be spiked together with three (3) 16d nails at 16” o.c.

END OF SECTION 06 05 23
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data. Shop Drawings.

B. Provide dressed lumber marked with grade stamp of inspection agency.

C. All wood framing including details for bridging, blocking, fire stopping, etc., shall conform to the latest edition of the “National Design Specification for Wood Construction” and its supplements and shall be installed in accordance with the NFPA “Manual for House Framing”.

D. Fastening shall be in accordance with the most restrictive of: The International Building Code 2012 or the manufacturer’s recommended fastening schedules.

PART 2 - PRODUCTS

2.01 LUMBER

A. Dimensional Lumber:
   1. Maximum Moisture Content: 19 percent
   2. Non-Load-Bearing Interior Partitions: Standard, Stud, or No. 3
   3. Framing Other Than Non-Load-Bearing Interior Partitions: Douglas fir-larch: WCLIB or WWPA
   4. Exposed Framing: Provide material hand-selected for uniformity of appearance and freedom from characteristics on exposed surfaces and edges that would impair finish appearance, including decay, honeycomb, knot-holes, shake, splits, torn grain, and wane.
      a. Species:
         1) Rafters and Joists: Douglas Fir
         2) Beams, Girders, and Headers: Douglas Fir
         3) Studs and Plates: Douglas Fir

B. Miscellaneous Lumber:
   1. Standard, Stud, or No. 3 grade with 19 percent maximum moisture content of any species
   2. Provide for nailers, blocking, and similar members

PART 3 - EXECUTION

3.01 INSTALLATION

A. All flush-framed connections shall be made with approved galvanized steel joist or beam hangers, minimum 18 gauge, installed according to manufacturer’s recommendations.
B. Where framing lumber is flush framed to microlam, steel or flitch-plate girder, set these girders 1/4” clear (min.) below top of framing lumber, to allow for shrinkage.

C. Stud walls are to be constructed of 2”x4” at 16” o.c. at the interior unless noted otherwise on plan.

D. Use double studs at ends of wall and ends of wall openings.

E. Use double trimmers and headers at all floor openings where beams are not designated.

F. Built-up beams less than 8” deep shall be spiked together with two (2) 16d nails at 16” o.c.

G. Built-up beams greater than 8” deep shall be spiked together with three (3) 16d nails at 16” o.c.

H. No joists shall be cut or notched without approval.

END OF SECTION 06 11 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data
   B. Manufacturer’s published values of allowable design stresses shall be demonstrated by comprehensive testing.

PART 2 - PRODUCTS

2.01 NORDIC LAM COLUMN
   A. Dimension: 5-1/2” x 5-1/12” nominal.
   B. Loads are based on simply axially loaded columns subjected to a maximum eccentricity of either 1/6 column width or 1/6 column depth, whichever is worse
   C. For side loads, other eccentric end loads, or other combined axial and flexural loads, see NDS 2005.
   D. Values are based on a load duration factor $C_D$ of 1.00 and dry service conditions. The allowable bearing loads shall not be increased by any load duration factor.
   E. The column is assumed to be unbraced, except at the column ends, and the effective column length is equal to the actual column length.

2.02 NORDIC LAM HEADERS
   A. Dimension: 3-1/2” x 9-1/2” nominal, 5-1/2” x 9-1/2” nominal, 5-1/2” x 11-7/8” nominal.
   B. Span is measured center to center of supports. The maximum uniform loads are based on a load duration factor $C_D$ of 1.00.
   C. Assume lateral support is provided at each support and continuously along the compression edge of the beam.
   D. Sufficient bearing length shall be provided at supports. The bearing length requirements are based on the maximum total uniform loads and have been adjusted per NDS 2005, 3.10

PART 3 - EXECUTION

3.01 INSTALLATION
   A. Nordic Lam Column:
      1. Install to full compliance with specifications and details of manufacturer.
B. Nordic Lam Headers:
   1. Install to full compliance with specifications and details of manufacturer.

END OF SECTION 06 11 13
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data. Shop Drawings.

PART 2 - PRODUCTS

2.01 DECKS AND FRAMING STRUCTURE
   A. Provide heat treated materials (“cooked wood”) treated as follows: heated wood up to 250°C, using a water vapor as shielding gas.
   B. Heat treated materials do not need to be stamped by WWPA as qualifying lumber, with the KD-HT mark.
   C. Exterior Decks
      1. 5/4” x 4” Western Red Cedar
   D. Deck Framing Structure
      1. 2” x 10” nom. Douglas Fir

2.02 DECK SKIRTS
   A. Provide heat treated materials (“cooked wood”) treated as follows: heated wood up to 250°C, using a water vapor as shielding gas.
   B. Heat treated materials do not need to be stamped by WWPA as qualifying lumber, with the KD-HT mark.
   C. 5/4” x 4” Western Red Cedar
      1. Provide product matching same specifications as all exterior decking

2.03 WOOD PLANTER BOXES AND BENCHES
   A. Provide heat treated materials (“cooked wood”) treated as follows: heated wood up to 250°C, using a water vapor as shielding gas.
   B. Heat treated materials do not need to be stamped by WWPA as qualifying lumber, with the KD-HT mark.
   C. 5/4” x 4” Western Red Cedar
      1. Provide product matching same specifications as all exterior decking
PART 3 - EXECUTION

3.01 INSTALLATION

A. Fastening shall be in accordance with the most restrictive of: The International Building Code 2012 or the manufacturer’s recommended fastening schedules.

B. Decking shall run perpendicular to substructure and end on a girder. Deck boards will be fastened together at butt joints with Hurricane Simpson Ties.

C. All light-gauge hangers supporting preservative treated wood shall meet or exceed G185 (1.85 oz. of zinc per square foot). Alternatively, stainless steel connectors may be used. Fasteners shall match the selected hanger finish and material.

D. Set work to required levels in accordance with the most restrictive of: The International Building Code 2012 or the manufacturer’s recommended fastening schedules.

END OF SECTION 06 15 33
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data.

PART 2 - PRODUCTS

2.01 WOOD PANEL PRODUCTS, GENERAL
   A. Plywood: DOC PS 1

2.02 ROOF SHEATHING
   A. Plywood Roof Sheathing: 5/8” thick, 48/24 span rating

2.03 MISCELLANEOUS PRODUCTS
   A. Fasteners: 8d common nails at 4” o.c. at each sheet perimeter and 12” o.c.
   B. Adhesives for Field Gluing Panels to Framing: BF Goodrich PL400 or equal

PART 3 - EXECUTION

3.01 INSTALLATION
   A. Securely attach to substrates, complying with the following:
   B. Fastening Methods:
      1. Roof Sheathing:
         a. Nail to wood framing.
         b. Screw to cold-formed metal framing.

END OF SECTION 06 16 00
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Exterior wood trim.
   2. Lumber and Hardboard siding.

B. Related Requirements:
   1. Section 06 10 00 "Rough Carpentry" for furring, blocking, and other carpentry work not exposed to view and for framing exposed to view.

1.02 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.

B. Compliance Certificates:
   1. For lumber that is not marked with grade stamp.
   2. For preservative-treated wood that is not marked with treatment-quality mark.
   3. For fire-retardant-treated wood that is not marked with classification marking of testing and inspecting agency.

C. Evaluation Reports: For the following, from ICC-ES:
   1. Wood-preservative-treated wood.
   2. Fire-retardant-treated wood.
   3. Cellular PVC trim.
   4. Foam plastic moldings.

D. Sample Warranties: For manufacturer's warranties.

1.03 QUALITY ASSURANCE

A. Testing Agency Qualifications: For testing agency providing classification marking for fire-retardant-treated material, an inspection agency acceptable to authorities having jurisdiction that periodically performs inspections to verify that the material bearing the classification marking is representative of the material tested.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation. Protect materials from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.
1.05 FIELD CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecast weather conditions permit work to be performed and at least one coat of specified finish can be applied without exposure to rain, snow, or dampness.

1. For exterior ornamental wood columns, comply with manufacturer's written instructions and warranty requirements.

B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.

1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.

2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

1.06 WARRANTY

A. Manufacturer's Warranty for Hardboard Siding: Manufacturer agrees to repair or replace siding that fails in materials or workmanship within specified warranty period. Failures include, but are not limited to, deformation or deterioration beyond normal weathering.

1. Warranty Period for Siding (Excluding Finish): 25 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

A. Regional Materials: The following wood products shall be manufactured within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site.

1. Exterior trim.

2. Exterior lumber and high-density fiber-cement siding.

B. Lumber: DOC PS 20 and the following grading rules:

1. WCLIB: West Coast Lumber Inspection Bureau, Standard No. 17, "Grading Rules for West Coast Lumber."

2. WWPA: Western Wood Products Association, "Western Lumber Grading Rules."

C. Factory mark each piece of lumber with grade stamp of inspection agency indicating grade, species, moisture content at time of surfacing, and mill.

1. For exposed lumber, mark grade stamp on end or back of each piece, or omit grade stamp and provide certificates of grade compliance issued by inspection agency.

2.02 EXTERIOR TRIM

A. Lumber Trim for Unfinished Applications:
1. Species and Grade: Western red cedar, Clear Heart; NLGA, WCLIB, or WWPA.
2. Maximum Moisture Content: 15 percent with at least 85 percent of shipment at 12 percent or less.
4. Face Surface: Surfaced (smooth).

B. Primed Hardboard Trim: High-temperature-cured, high-resin, wood-fiber composite; factory primed on faces and edges. Recommended by manufacturer for exterior use.

### 2.03 LUMBER SIDING

A. Species and Grade: Clear VG (Vertical Grain) Heart western red cedar; NLGA, WCLIB, or WWPA.

### 2.04 HARDBOARD SIDING

A. Minerit HD Concrete exterior panels (fibre C), 1/4-inch thickness.

### 2.05 MISCELLANEOUS MATERIALS

A. Fasteners for Exterior Finish Carpentry: Provide screws, in sufficient length to penetrate not less than 1 1/2 inches (38 mm) into wood substrate.

1. Provide stainless-steel fasteners.

B. Flashing: Comply with requirements in Section 07 62 00 "Sheet Metal Flashing and Trim" for flashing materials installed in exterior finish carpentry.

### 2.06 FABRICATION

A. Back out or kerf backs of standing and running trim wider than 5 inches (125 mm), except members with ends exposed in finished work.

B. Ease edges of lumber less than 1 inch (25 mm) in nominal thickness to 1/16-inch (1.5-mm) radius and edges of lumber 1 inch (25 mm) or more in nominal thickness to 1/8-inch (3-mm) radius.

### PART 3 - EXECUTION

#### 3.01 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

#### 3.02 PREPARATION

A. Clean substrates of projections and substances detrimental to application.
B. Prime lumber and moldings to be painted, including both faces and edges, unless factory primed. Cut to required lengths and prime ends. Comply with requirements in Section 09 91 13 "Exterior Painting."

3.03 INSTALLATION, GENERAL

A. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, or too small to fabricate with proper jointing arrangements.

1. Do not use manufactured units with defective surfaces, sizes, or patterns.

B. Install exterior finish carpentry level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.

1. Scribe and cut exterior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.
2. Install to tolerance of 1/8 inch in 96 inches (3 mm in 2438 mm) for level and plumb. Install adjoining exterior finish carpentry with 1/32-inch (0.8-mm) maximum offset for flush installation and 1/16-inch (1.5-mm) maximum offset for reveal installation.
3. Coordinate exterior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate exterior finish carpentry.

3.04 STANDING AND RUNNING TRIM INSTALLATION

A. Install flat-grain lumber with bark side exposed to weather.

B. Install trim with minimum number of joints practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than 24 inches (610 mm) long except where necessary.

1. Use scarf joints for end-to-end joints.
2. Stagger end joints in adjacent and related members.

C. Fit exterior joints to exclude water. Cope at returns and miter at corners to produce tight-fitting joints with full-surface contact throughout length of joint. Plane backs of casings to provide uniform thickness across joints, where necessary for alignment.

D. Where face fastening is unavoidable, countersink fasteners, fill surface flush, and sand unless otherwise indicated.

3.05 SIDING INSTALLATION

A. Install siding to comply with manufacturer's written instructions and warranty requirements.

B. Horizontal Lumber Siding: Apply starter strip along bottom edge of sheathing or sill. Install subsequent courses spaced as detailed over course below. Screw at each stud. Do not allow screws to penetrate more than one thickness of siding.

1. Leave 1/8-inch (3-mm) gap at trim and corners unless otherwise recommended by manufacturer.
2. Butt joints only over framing or blocking, nailing top and bottom on each side and staggering joints in subsequent courses.
C. Hardboard Siding: Install hardboard siding to comply with manufacturer's recommendations. Install panels with edges over framing or blocking. Leave 3/16-inch (5-mm) gap at perimeter, openings, and horizontal panel joints unless otherwise recommended by panel manufacturer.

1. Seal butt joints at inside and outside corners and at trim locations.
2. Install continuous metal flashing at horizontal panel joints.
3. Conceal fasteners to greatest practical extent by placing in grooves of siding pattern or by concealing with applied trim or battens as detailed.

D. Flashing: Install metal flashing as indicated on Drawings and as recommended by siding manufacturer.

3.06 ADJUSTING

A. Replace exterior finish carpentry that is damaged or does not comply with requirements. Exterior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing. Adjust joinery for uniform appearance.

3.07 CLEANING

A. Clean exterior finish carpentry on exposed and semiexposed surfaces. Touch up factory-applied finishes to restore damaged or soiled areas.
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Interior trim, including non-fire-rated interior door frames.
   2. Shelving and clothes rods.

B. Related Requirements:
   1. Section 09 91 23 "Interior Painting" for priming and backpriming of interior finish carpentry.

1.02 SUBMITTALS

A. Product Data: For each type of process and factory-fabricated product. Indicate component materials, dimensions, profiles, textures, and colors and include construction and application details.
   1. For products receiving a waterborne treatment, include statement that moisture content of treated materials was reduced before shipment to Project site to levels specified.
   2. Include copies of warranties from chemical-treatment manufacturers for each type of treatment.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Stack lumber, plywood, and other panels flat with spacers between each bundle to provide air circulation. Protect materials from weather by covering with waterproof sheeting, securely anchored. Provide for air circulation around stacks and under coverings.

B. Deliver interior finish carpentry materials only when environmental conditions meet requirements specified for installation areas. If interior finish carpentry materials must be stored in other than installation areas, store only where environmental conditions meet requirements specified for installation areas.

1.04 FIELD CONDITIONS

A. Environmental Limitations: Do not deliver or install interior finish carpentry materials until building is enclosed and weatherproof, wet work in space is completed and nominally dry, and HVAC system is operating and maintaining temperature and relative humidity at occupancy levels during the remainder of the construction period.

B. Do not install finish carpentry materials that are wet, moisture damaged, or mold damaged.
   1. Indications that materials are wet or moisture damaged include, but are not limited to, discoloration, sagging, or irregular shape.
2. Indications that materials are mold damaged include, but are not limited to, fuzzy or splotchy surface contamination and discoloration.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

A. Regional Materials: The following wood products shall be manufactured within 500 miles (800 km) of Project site from materials that have been extracted, harvested, or recovered, as well as manufactured, within 500 miles (800 km) of Project site.

1. Interior trim.
2. Shelving and clothes rods.

B. Lumber: DOC PS 20 and the following grading rules:

5. WCLIB: West Coast Lumber Inspection Bureau, Standard No. 17, "Grading Rules for West Coast Lumber."
6. WWPA: Western Wood Products Association, "Western Lumber Grading Rules."

C. Factory mark each piece of lumber with grade stamp of inspection agency indicating grade, species, moisture content at time of surfacing, and mill.

1. For exposed lumber, mark grade stamp on end or back of each piece, or omit grade stamp and provide certificates of grade compliance issued by inspection agency.

D. Softwood Plywood: DOC PS 1.

E. Hardboard: AHA A135.4.

F. MDF: ANSI A208.2, Grade 130, made with binder containing no urea-formaldehyde resin.

G. Particleboard: ANSI A208.1, Grade M-2, made with binder containing no urea-formaldehyde resin.

H. Melamine-Faced Particleboard: Particleboard complying with ANSI A208.1, Grade M-2, finished on both faces with thermally fused, melamine-impregnated decorative paper and complying with requirements of NEMA LD3, Grade VGL, for test methods 3.3, 3.4, 3.6, 3.8, and 3.10.

2.02 INTERIOR TRIM

A. Lumber Trim for Opaque Finish (Painted Finish):
1. Species and Grade: Eastern white pine, Premium or 2 Common; NeLMA or NLGA.
2. Maximum Moisture Content: 10 percent.
4. Face Surface: Surfaced (smooth).
5. Optional Material: Primed MDF of same actual dimensions as lumber indicated may be used in lieu of lumber.

2.03 SHELVING AND CLOTHES RODS

A. Utility Shelving: Made from one of the following materials, 3/4 inch (19 mm) thick.
   1. MDF with radiused or solid-wood front edge.
   2. MDO softwood plywood with solid-wood edge.

B. Shelf Brackets without Rod Support: BHMA A156.16, B04041; prime-painted formed steel.

C. Standards for Adjustable Shelf Brackets: BHMA A156.9, B04102; powder-coat-finished steel.

D. Adjustable Shelf Brackets: BHMA A156.9, B04112; powder-coat-finished steel.

E. Standards for Adjustable Shelf Supports: BHMA A156.9, B04071; powder-coat-finished steel.

F. Adjustable Shelf Supports: BHMA A156.9, B04081 or B04091; powder-coat-finished steel.

G. Clothes Rods: 1-5/16-inch- (33-mm-) diameter, color-coated steel tubes.

2.04 MISCELLANEOUS MATERIALS

A. Fasteners for Interior Finish Carpentry: Nails, screws, and other anchoring devices of type, size, material, and finish required for application indicated to provide secure attachment, concealed where possible.

B. Glue: Aliphatic-resin, polyurethane, or resorcinol wood glue recommended by manufacturer for general carpentry use.
   1. Wood glue shall have a VOC content of 30 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

C. Multipurpose Construction Adhesive: Formulation complying with ASTM D 3498 that is recommended for indicated use by adhesive manufacturer.
   1. Adhesive shall have a VOC content of 70 g/L or less when calculated according to 40 CFR 59, Subpart D (EPA Method 24).

2.05 FABRICATION

A. Back out or kerf backs of the following members except those with ends exposed in finished work:
   1. Interior standing and running trim except shoe and crown molds.
   2. Wood-board paneling.
B. Ease edges of lumber less than 1 inch (25 mm) in nominal thickness to 1/16-inch (1.5-mm) radius and edges of lumber 1 inch (25 mm) or more in nominal thickness to 1/8-inch (3-mm) radius.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance.

B. Examine finish carpentry materials before installation. Reject materials that are wet, moisture damaged, and mold damaged.

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Clean substrates of projections and substances detrimental to application.

B. Before installing interior finish carpentry, condition materials to average prevailing humidity in installation areas for a minimum of 24 hours unless longer conditioning is recommended by manufacturer.

3.03 INSTALLATION, GENERAL

A. Do not use materials that are unsound, warped, improperly treated or finished, inadequately seasoned, too small to fabricate with proper jointing arrangements, or with defective surfaces, sizes, or patterns.

B. Install interior finish carpentry level, plumb, true, and aligned with adjacent materials. Use concealed shims where necessary for alignment.

1. Scribe and cut interior finish carpentry to fit adjoining work. Refinish and seal cuts as recommended by manufacturer.

2. Where face fastening is unavoidable, countersink fasteners, fill surface flush, and sand unless otherwise indicated.

3. Install to tolerance of 1/8 inch in 96 inches (3 mm in 2438 mm) for level and plumb. Install adjoining interior finish carpentry with 1/32-inch (0.8-mm) maximum offset for flush installation and 1/16-inch (1.5-mm) maximum offset for reveal installation.

4. Coordinate interior finish carpentry with materials and systems in or adjacent to it. Provide cutouts for mechanical and electrical items that penetrate interior finish carpentry.

3.04 STANDING AND RUNNING TRIM INSTALLATION

A. Install with minimum number of joints practical, using full-length pieces from maximum lengths of lumber available. Do not use pieces less than 24 inches (610 mm) long, except where necessary. Stagger joints in adjacent and related standing and running trim. Cope at returns, miter at outside corners, and cope at inside corners to produce tight-fitting joints with full-surface contact throughout length of joint. Use scarf joints for end-to-end joints. Plane backs of casings to provide uniform thickness across joints where necessary for alignment.

1. Install trim after gypsum-board joint finishing operations are completed.
2. Install without splitting; drill pilot holes before fastening where necessary to prevent splitting. Fasten to prevent movement or warping. Countersink fastener heads on exposed carpentry work and fill holes.

3.05 SHELVING AND CLOTHES ROD INSTALLATION

A. Cut shelf cleats at ends of shelves about 1/2 inch (13 mm) less than width of shelves and sand exposed ends smooth.

B. Install shelf brackets according to manufacturer's written instructions, spaced not more than 32 inches (800 mm) o.c. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.

C. Install standards for adjustable shelf supports according to manufacturer's written instructions. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Space fasteners not more than 12 inches (300 mm) o.c.

D. Install standards for adjustable shelf brackets according to manufacturer's written instructions, spaced not more than 36 inches (900 mm) o.c. and within 6 inches (150 mm) of end of shelves. Fasten to framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors.

E. Cut shelves to neatly fit openings with only enough gap to allow shelves to be removed and reinstalled. Install shelves, fully seated on cleats, brackets, and supports.
   1. Fasten shelves to brackets to comply with bracket manufacturer's written instructions.

F. Install rod flanges for rods as indicated. Fasten to shelf cleats, framing members, blocking, or metal backing, or use toggle bolts or hollow wall anchors. Install rods in rod flanges.

3.06 ADJUSTING

A. Replace interior finish carpentry that is damaged or does not comply with requirements. Interior finish carpentry may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing. Adjust joinery for uniform appearance.

END OF SECTION 06 20 23
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Concealed rubberized-asphalt strip flashing at exterior openings.
   2. Concealed rubberized-asphalt strip flashing under roofing.

B. Related Sections include the following:
   1. Division 07 Section "Joint Sealing" for joint-sealant materials and installation.

1.02 PERFORMANCE REQUIREMENTS

A. Provide waterproofing that prevents the passage of water.

1.03 SUBMITTALS

A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties of waterproofing.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer who is acceptable to waterproofing manufacturer to install manufacturer's products.

B. Source Limitations: Obtain waterproofing materials through one source from a single manufacturer.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Deliver liquid materials to Project site in original packages with seals unbroken, labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged packages in a clean, dry, protected location and within temperature range required by waterproofing manufacturer.

C. Remove and replace liquid materials that cannot be applied within their stated shelf life.

D. Store rolls according to manufacturer's written instructions.

E. Protect stored materials from direct sunlight.

1.06 PROJECT CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate.
   1. Do not apply waterproofing in snow, rain, fog, or mist.
B. Maintain adequate ventilation during preparation and application of waterproofing materials.

1.07 WARRANTY

A. Special Manufacturer's Warranty: Written warranty, signed by waterproofing manufacturer agreeing to replace waterproofing material that does not comply with requirements or that does not remain watertight during specified warranty period.
   1. Warranty does not include failure of waterproofing due to failure of substrate prepared and treated according to requirements or formation of new joints and cracks in substrate exceeding 1/16 inch (1.6 mm) in width.
   2. Warranty Period: Three years after date of Substantial Completion.

B. Special Installer's Warranty for Roofing Underlayment: Written waterproofing Installer's warranty, signed by Installer, covering Work of this Section, for warranty period of two years.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

2.02 RUBBERIZED-ASPHALT STRIP FLASHING

A. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:

B. Rubberized-Asphalt Strips: 40-mil- (1.02-mm-) thick, self-adhering sheet consisting of 37-mil (0.95-mm) of rubberized asphalt laminated to a 3-mil- (0.07-mm-) thick, polyethylene film with release liner on adhesive side and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction. Provide minimum 9-inch wide strips.
   1. Physical Properties: As follows, measured per standard test methods referenced:
      a. Tensile Strength: 250 psi (1.7 MPa) minimum; ASTM D 412, Die C, modified.
      c. Low-Temperature Flexibility: Unaffected at minus 45 deg F (minus 43 deg C); ASTM D 1970.
      d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch (3-mm) movement; ASTM C 836.
      e. Vapor Permeance: 0.05 perms (2.9 ng/Pa x s x sq. m); ASTM E 96, Water Method.

2.03 RUBBERIZED-ASPHALT STRIP ROOFING UNDERLAYMENT

A. Products: Subject to compliance with requirements, products that may be incorporated into the Work include, but are not limited to, the following:
B. Rubberized-Asphalt Strips: 40-mil- (1.02-mm-) thick, self-adhering sheet consisting of 37-mil (0.95-mm) of rubberized asphalt laminated to a 3-mil (0.07-mm-) thick, polyethylene film with release liner on adhesive side and formulated for application with primer or surface conditioner that complies with VOC limits of authorities having jurisdiction. Provide minimum 9-inch wide strips.

1. Physical Properties: As follows, measured per standard test methods referenced:
   a. Tensile Strength: 250 psi (1.7 MPa) minimum; ASTM D 412, Die C, modified.
   c. Low-Temperature Flexibility: Unaffected at minus 29 deg F (minus 20 deg C); ASTM D 1970.
   d. Crack Cycling: Unaffected after 100 cycles of 1/8-inch (3-mm) movement; ASTM C 836.
   e. Vapor Permeance: 0.05 perms (2.9 ng/Pa x s x sq. m); ASTM E 96, Water Method.

2.04 AUXILIARY MATERIALS

A. General: Furnish auxiliary materials recommended by waterproofing manufacturer for intended use and compatible with sheet waterproofing.

1. Furnish liquid-type auxiliary materials that comply with VOC limits of authorities having jurisdiction.

B. Primer: Liquid primer recommended for substrate by manufacturer of sheet waterproofing material.

C. Surface Conditioner: Liquid, waterborne surface conditioner recommended for substrate by manufacturer of sheet waterproofing material.

D. Sheet Strips: Self-adhering, rubberized-asphalt composite sheet strips of same material and thickness as sheet waterproofing.

E. Tape: Self-adhering strips of same material and thickness as sheet waterproofing or compatible material as recommended by the membrane manufacturer.

F. Liquid Membrane: Elastomeric, two-component liquid, cold fluid applied, trowel grade or low viscosity.

G. Substrate Patching Membrane: Low-viscosity, two-component, asphalt-modified coating.

H. Mastic, Adhesives, and Tape: Liquid mastic and adhesives, and adhesive tapes recommended by waterproofing manufacturer.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements and other conditions affecting performance.

1. Verify that concrete has cured and aged for minimum time period recommended by waterproofing manufacturer.

2. Verify that concrete is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
3. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 SURFACE PREPARATION

A. Clean, prepare, and treat substrates according to manufacturer's written instructions. Provide clean, dust-free, and dry substrates for waterproofing application.

B. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

C. Remove grease, oil, bitumen, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

D. Remove fins, ridges, mortar, and other projections and fill honeycomb, aggregate pockets, holes, and other voids.

E. Prepare, fill, prime, and treat joints and cracks in substrates. Remove dust and dirt from joints and cracks according to ASTM D 4258.
   1. Install sheet strips and center over treated construction and contraction joints and cracks exceeding a width of 1/16 inch (1.6 mm).

F. Bridge and cover isolation joints, expansion joints, and discontinuous deck-to-wall and deck-to-deck joints with overlapping sheet strips.
   1. Invert and loosely lay first sheet strip over center of joint. Firmly adhere second sheet strip to first and overlap to substrate.

G. Corners: Prepare, prime, and treat inside and outside corners according to ASTM D 6135.
   1. Install membrane strips centered over vertical inside corners. Install 3/4-inch (19-mm) fillets of liquid membrane on horizontal inside corners and as follows:
      a. At footing-to-wall intersections, extend liquid membrane each direction from corner or install membrane strip centered over corner.
      b. At plaza deck-to-wall intersections, extend liquid membrane or sheet strips onto deck waterproofing and to finished height of sheet flashing.

H. Prepare, treat, and seal vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and protrusions according to ASTM D 6135.

3.03 RUBBERIZED-ASPHALT SHEET AND STRIP APPLICATION

A. Install self-adhering sheets according to waterproofing manufacturer's written instructions and recommendations in ASTM D 6135.

B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by sheet waterproofing in same day. Reprime areas exposed for more than 24 hours.

C. Apply and firmly adhere sheets over area to receive waterproofing. Accurately align sheets and maintain uniform 2-1/2-inch- (64-mm-) minimum lap widths and end laps. Overlap and seal seams and stagger end laps to ensure watertight installation.
   1. When ambient and substrate temperatures range between 25 and 40 deg F (minus 4 and plus 5 deg C), install self-adhering, rubberized-asphalt sheets produced for low-temperature application. Do not use low-temperature sheets if ambient or substrate temperature is higher than 60 deg F (16 deg C).
D. Horizontal Application: Apply sheets from low point to high point of decks to ensure that side laps shed water.

E. Application at Openings: Apply strips at sill first, then jambs, and lastly at head of openings. Install over fins and flanges, and install weatherproofing membranes for general wall areas over the strips.

F. Application at Roofs: Apply strips from low point to high point of roofs to ensure that side laps shed water and in accordance with roofing manufacturer’s recommendations.
   1. At roof eaves: Install from roof edge to a height 24-inches away from the roof edge.
   2. At valleys: Install from center of valley to 24 inches from the valley in both directions.

G. Apply continuous sheets over sheet strips bridging substrate cracks, construction, and contraction joints.

H. Seal exposed edges of sheets at terminations not concealed by metal counterflashings or ending in reglets with mastic or sealant.

I. Repair tears, voids, and lapped seams in waterproofing not complying with requirements. Slit and flatten fishmouths and blisters. Patch with sheets extending 6 inches (150 mm) beyond repaired areas in all directions.

J. Correct deficiencies in or remove sheet waterproofing that does not comply with requirements, repair substrates, reapply waterproofing, and repair sheet flashings.

3.04 PROTECTION AND CLEANING

A. Do not permit foot or vehicular traffic on unprotected membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes reinforced hot fluid-applied waterproofing membrane, including special permits that may be required for hot-applied systems.

1.02 SUBMITTALS

A. Product Data: Include manufacturer's written instructions for evaluating, preparing, and treating substrate, technical data, and tested physical and performance properties.

1.03 QUALITY ASSURANCE

A. Installer Qualifications: A qualified installer, approved by manufacturer to install manufacturer's products; and who is eligible to receive waterproofing warranty specified.

1.04 PROJECT CONDITIONS

A. Environmental Limitations: Apply waterproofing within the range of ambient and substrate temperatures recommended by waterproofing manufacturer. Do not apply waterproofing to a damp or wet substrate, or when temperature is below 0 deg F (minus 18 deg C).

1.05 WARRANTY

A. Special Warranty: Manufacturer's standard form, signed by manufacturer, in which manufacturer agrees to repair or replace waterproofing and sheet flashings that do not comply with requirements or that do not remain watertight for a period of five years after date of Substantial Completion.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Products: Subject to compliance with requirements, provide one of the following:
   2. Tremco; Tremproof 150.

2.02 MATERIALS

A. Membrane: Single-component; 100 percent solids; hot fluid-applied, rubberized asphalt complying with CAN/CGSB-37.50.

B. Primer: ASTM D 41, asphaltic primer.

C. Elastomeric Flashing Sheet: 50-mil- (1.3-mm-) minimum, nonstaining, uncured sheet neoprene
D. Reinforcing Fabric: Manufacturer's recommended spun-bonded polyester fabric.

E. Protection Course: Semirigid sheets of fiberglass or mineral-reinforced-asphaltic core, pressure laminated between 2 asphalt-saturated fibrous liners and nominal thickness 1/8 inch (3 mm).

2.03 ROOF INSULATION

A. General: Provide preformed roof insulation boards that comply with requirements and referenced standards, selected from manufacturer's standard sizes and of thicknesses indicated.

B. Polyisocyanurate Board Insulation: ASTM C 1289, 1/2-inch Type III (perlite) or Type IV (cellulosic fiber) insulation board on one major surface and felt or glass-fiber mat facer on other major surface.
   1. Manufacturers:
      b. Carlisle SynTec Incorporated.
      c. Celotex Corporation.
      d. Firestone Building Products Company.
      e. GAF Materials Corporation.
      g. Koppers Industries.

C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48), unless otherwise indicated.

D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.04 MOLDED-SHEET DRAINAGE PANELS

A. Nonwoven-Geotextile-Faced, Molded-Sheet Drainage Panel: Manufactured composite subsurface drainage panels consisting of a nonwoven, needle-punched geotextile facing with an apparent opening size not exceeding No. 70 (0.21-mm) sieve laminated to 1 side and a polymeric film bonded to the other side of a 3-dimensional, nonbiodegradable, molded-plastic-sheet drainage core, with a vertical flow rate of 9 to 15 gpm per ft. (112 to 188 L/min. per m).

PART 3 - EXECUTION

3.01 PREPARATION

A. Secure special permits and variances from authorities having jurisdiction for using hot systems.

B. Clean and prepare substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for waterproofing application.

C. Mask off adjoining surfaces not receiving waterproofing to prevent spillage and overspray affecting other construction.

D. Close off deck drains and other deck penetrations to prevent spillage and migration of waterproofing fluids.
E. Remove grease, oil, form-release agents, paints, curing compounds, and other penetrating contaminants or film-forming coatings from concrete.

F. Remove fins, ridges, and other projections and fill honeycomb, aggregate pockets, and other voids.

3.02 JOINT AND CRACK TREATMENT

B. Install elastomeric sheet reinforcement and bond to deck and wall substrates where indicated or required. Extend elastomeric sheet reinforcement a minimum of 6 inches (150 mm) onto perpendicular surfaces and other work penetrating substrate.

C. Prepare vertical and horizontal surfaces at terminations and penetrations through waterproofing and at drains and sleeves.

1. At expansion joints and discontinuous deck-to-wall or deck-to-deck joints, bridge joint with sheet flashing extended along each side of joint and securely bond to substrate.

2. Install elastomeric flashing sheet at terminations and adhere to deck and wall substrates in a layer of hot, rubberized asphalt.

3.03 MEMBRANE APPLICATION

A. Apply rubberized asphalt according to CAN/CGSB-37.51 and manufacturer's written instructions.

B. Heat rubberized asphalt in an oil- or air-jacketed melter with mechanical agitator specifically designed for heating rubberized-asphalt waterproofing.

C. Apply primer, at manufacturer's recommended rate, over prepared substrate and allow to dry.

D. Reinforced Membrane: Apply waterproofing to substrates and adjoining surfaces indicated. Spread hot fluid-applied, rubberized asphalt to a thickness of 90 mils (2.3 mm); embed reinforcing fabric, overlapping sheets 2 inches (50 mm); and spread another 125-mil- (3.2-mm-) thick layer to provide a uniform, reinforced, seamless membrane 215 mils (5.5 mm) thick.

E. Apply waterproofing over prepared joints and up wall terminations and vertical surfaces to heights indicated or required by manufacturer.

F. Install protection course with overlapped joints while rubberized asphalt is still hot.

3.04 INSULATION INSTALLATION

A. Install insulation panels over fluid-applied membrane according to manufacturer's written instructions. Use adhesives that do not penetrate or degrade waterproofing. Slope insulation to drain.

3.05 MOLDED-SHEET DRAINAGE PANEL INSTALLATION

A. Place and secure molded-sheet drainage panels to substrate according to manufacturer's written instructions. Use adhesives that do not penetrate waterproofing. Lap edges and
ends of geotextile to maintain continuity. Protect installed molded-sheet drainage panels during subsequent construction.

3.06 PROTECTING AND CLEANING

A. Do not permit foot or vehicular traffic on unprotected horizontal membrane.

B. Protect waterproofing from damage and wear during remainder of construction period.

C. Clean spillage and soiling from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 14 13
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Foam-plastic board insulation.
   2. Spray polyurethane foam insulation.
   3. Vapor retarders.

B. Related Work specified elsewhere includes:
   1. Division 07 roofing Sections for insulation installed as part of the roofing system.

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Schedule: Indicate where each type of product is to be applied. Provide drawings if necessary to show where insulation is to be installed.

PART 2 - PRODUCTS

2.01 FOAM-PLASTIC BOARD INSULATION

A. Extruded-Polystyrene Board Insulation: ASTM C 578, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Dow Chemical Company (The).
      b. Owens Corning.
   2. Type VI, 40 psi (276 kPa) at wall systems where insulation will be completely enclosed.

2.02 SPRAY POLYURETHANE FOAM INSULATION

A. Closed-Cell Polyurethane Foam Insulation: ASTM C 1029, Type II, with maximum flame-spread and smoke-developed indexes of 75 and 450, respectively, per ASTM E 84.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. BASF Corporation.
      b. Dow Chemical Company (The).
      c. Gaco Western Inc.
      d. Henry Company.
      e. Volatile Free, Inc.
   2. Minimum density of 1.5 lb/cu. ft. (24 kg/cu. m), thermal resistivity of 6.2 deg F x h x sq. ft./Btu x in. at 75 deg F (43 K x m/W at 24 deg C).
2.03 VAPOR RETARDERS

A. Reinforced-Polyethylene Vapor Retarders: Two outer layers of polyethylene film laminated to an inner reinforcing layer consisting of either nylon cord or polyester scrim and weighing not less than 25 lb/1000 sq. ft. (12 kg/100 sq. m), with maximum permeance rating of 0.0507 perm (2.9 ng/Pa x s x sq. m).
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Raven Industries Inc.; DURA-SKRIM 6WW.

B. Vapor-Retarder Tape: Pressure-sensitive tape of type recommended by vapor-retarder manufacturer for sealing joints and penetrations in vapor retarder.

C. Vapor-Retarder Fasteners: Pancake-head, self-tapping steel drill screws; with fender washers.

2.04 AUXILIARY INSULATING MATERIALS

A. Insulation for Small Voids: Foamed in-place plastic; C.R. Laurence Company "Handi-Foam II".

B. Sheet Caulking: Lowry's "Electrical Box Pads" resilient, self-adhesive sheet sealer.

PART 3 - EXECUTION

3.01 INSTALLATION, GENERAL

A. Comply with insulation manufacturer's written instructions applicable to products and applications indicated.

B. Install insulation that is undamaged, dry, and unsoiled and that has not been left exposed to ice, rain, or snow at any time.

C. Extend insulation to envelop entire area to be insulated. Cut and fit tightly around obstructions and fill voids with insulation. Remove projections that interfere with placement.

D. Provide sizes to fit applications indicated and selected from manufacturer's standard thicknesses, widths, and lengths. Apply single layer of insulation units to produce thickness indicated unless multiple layers are otherwise shown or required to make up total thickness.

3.02 INSTALLATION OF CAVITY-WALL INSULATION

A. Foam-Plastic Board Insulation: Install pads of adhesive spaced approximately 24 inches (610 mm) o.c. both ways on inside face, and as recommended by manufacturer. Fit courses of insulation between wall ties and other obstructions, with edges butted tightly in both directions. Press units firmly against inside substrates.
   1. Supplement adhesive attachment of insulation by securing boards with two-piece wall ties designed for this purpose and specified in Division 04 Section "Unit Masonry."
3.03 INSTALLATION OF INSULATION FOR FRAMED CONSTRUCTION

A. Apply insulation units to substrates by method indicated, complying with manufacturer's written instructions. If no specific method is indicated, bond units to substrate with adhesive or use mechanical anchorage to provide permanent placement and support of units.

B. Foam-Plastic Board Insulation: Seal joints between units by applying adhesive, mastic, or sealant to edges of each unit to form a tight seal as units are shoved into place. Fill voids in completed installation with adhesive, mastic, or sealant as recommended by insulation manufacturer.

C. Spray-Applied Insulation: Apply spray-applied insulation according to manufacturer's written instructions. Do not apply insulation until installation of pipes, ducts, conduits, wiring, and electrical outlets in walls is completed and windows, electrical boxes, and other items not indicated to receive insulation are masked. After insulation is applied, make flush with face of studs by using method recommended by insulation manufacturer.

D. Miscellaneous Voids: Install insulation in miscellaneous voids and cavity spaces where required to prevent gaps in insulation using the following materials:
   1. Loose-Fill Insulation: Compact to approximately 40 percent of normal maximum volume equaling a density of approximately 2.5 lb/cu. ft. (40 kg/cu. m).
   2. Spray Polyurethane Insulation: Apply according to manufacturer's written instructions.

E. Electrical Boxes: Install sheet caulking at each electrical switch and outlet box and at cavity spaces where required to prevent air infiltration through boxes in framed and cavity walls.

3.04 INSTALLATION OF VAPOR RETARDERS

A. Place vapor retarders on side of construction indicated on Drawings. Extend vapor retarders to extremities of areas to protect from vapor transmission. Secure vapor retarders in place with adhesives or other anchorage system as indicated. Extend vapor retarders to cover miscellaneous voids in insulated substrates, including those filled with loose-fiber insulation.

B. Seal vertical joints in vapor retarders over framing by lapping no fewer than two studs.
   1. Fasten vapor retarders to wood framing at top, end, and bottom edges; at perimeter of wall openings; and at lap joints. Space fasteners 16 inches (406 mm) o.c.

C. Seal joints caused by pipes, conduits, electrical boxes, and similar items penetrating vapor retarders with vapor-retarder tape to create an airtight seal between penetrating objects and vapor retarders.

D. Repair tears or punctures in vapor retarders immediately before concealment by other work. Cover with vapor-retarder tape or another layer of vapor retarders.

END OF SECTION 07 21 00
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following:
   1. Fluid-applied membrane air barrier, vapor retarding.

1.02 PERFORMANCE REQUIREMENTS

A. General: Air barrier shall be capable of performing as a continuous vapor-retarding air barrier and as a liquid-water drainage plane flashed to discharge to the exterior incidental condensation or water penetration. Air barrier assemblies shall be capable of accommodating substrate movement and of sealing substrate expansion and control joints, construction material changes, and transitions at perimeter conditions without deterioration and air leakage exceeding specified limits.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated

1.04 QUALITY ASSURANCE

A. Applicator Qualifications: A firm experienced in applying air barrier materials similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.

PART 2 - PRODUCTS

2.01 FLUID-APPLIED MEMBRANE AIR BARRIER

A. Fluid-Applied, Vapor-Retarding Membrane Air Barrier: Elastomeric, modified bituminous or synthetic polymer membrane.
   1. Products: Subject to compliance with requirements, provide one of the following:
      a. Elastomeric Modified Bituminous Membrane:
         1) Carlisle Coatings & Waterproofing; Barriseal.
         2) Henry Company; Air-Bloc 06.
         3) Meadows, W. R., Inc.; Air-Shield LM.
         4) NEI; AC AVS1.
         5) Tremco Incorporated; ExoAir.
      b. Synthetic Polymer Membrane:
         2) Henry Company; Air-Bloc 21 or 21S.
         3) Rubber Polymer Corporation; Rub-R-Wall Airtight.
   2. Physical and Performance Properties:
      a. Membrane Air Permeance: Not to exceed 0.004 cfm x sq. ft. of surface area at 1.57-lbf/sq. ft. (0.02 L/s x sq. m of surface area at 75-Pa) pressure difference; ASTM E 2178.
2.02 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by air barrier manufacturer for intended use and compatible with air barrier membrane. Liquid-type auxiliary materials shall comply with VOC limits of authorities having jurisdiction.

B. Primer: Liquid primer recommended for substrate by manufacturer of air barrier material.

C. Joint Reinforcing Strip: Air barrier manufacturer's glass-fiber-mesh tape.

D. Substrate Patching Membrane: Manufacturer's standard trowel-grade substrate filler.

E. Sprayed Polyurethane Foam Sealant: 1- or 2-component, foamed-in-place, polyurethane foam sealant, 1.5 to 2.0 lb/cu. ft (24 to 32 kg/cu. m) density; flame spread index of 25 or less according to ASTM E 162; with primer and noncorrosive substrate cleaner recommended by foam sealant manufacturer.

F. Elastomeric Flashing Sheet: ASTM D 2000, 2BC415 to 3BC620, minimum 50- to 65-mil- (1.3- to 1.6-mm-) thick, cured sheet neoprene with manufacturer's recommended contact adhesives and lap sealant with aluminum termination bars and stainless-steel fasteners.

G. Joint Sealant: ASTM C 920, single-component, neutral-curing silicone; Class 100/50 (low-modulus), Grade NS, Use NT related to exposure, and, as applicable to joint substrates indicated, Use O. Comply with Division 07 Section "Joint Sealants."

PART 3 - EXECUTION

3.01 JOINT TREATMENT

A. Concrete and Masonry: Prepare, treat, rout, and fill joints and cracks in substrate according to ASTM C 1193 and air barrier manufacturer's written instructions.

B. Gypsum Sheathing: Fill joints greater than 1/4 inch (6 mm) with sealant according to ASTM C 1193 and with air barrier manufacturer's written instructions. Apply first layer of fluid air barrier membrane at joints. Tape joints with joint reinforcing strip after first layer is dry. Apply a second layer of fluid air barrier membrane over joint reinforcing strip.

3.02 TRANSITION STRIP INSTALLATION

A. Install strips, transition strips, and auxiliary materials according to air barrier manufacturer's written instructions to form a seal with adjacent construction and maintain a continuous air barrier.
   1. Coordinate the installation of air barrier with installation of roofing membrane and base flashing to ensure continuity of air barrier with roofing membrane.
   2. Install modified bituminous strip on roofing membrane or base flashing so that a minimum of 3 inches (75 mm) of coverage is achieved over both substrates.

B. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air barrier sheet in same day. Reprime areas exposed for more than 24 hours.
1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

C. Connect and seal exterior wall air barrier membrane continuously to roofing membrane air barrier, concrete below-grade structures, floor-to-floor construction, exterior glazing and window systems, glazed curtain-wall systems, storefront systems, exterior louvers, exterior door framing, and other construction used in exterior wall openings, using accessory materials as indicated.

D. At end of each working day, seal top edge of strips and transition strips to substrate with termination mastic.

E. Apply joint sealants forming part of air barrier assembly within manufacturer's recommended application temperature ranges. Consult manufacturer when sealant cannot be applied within these temperature ranges.

F. Wall Openings: Prime concealed perimeter frame surfaces of windows, curtain walls, storefronts, and doors. Apply elastomeric flashing sheet so that a minimum of 3 inches (75 mm) of coverage is achieved over both substrates. Maintain 3 inches (75 mm) of full contact over firm bearing to perimeter frames with not less than 1 inch (25 mm) of full contact.

G. Fill gaps in perimeter frame surfaces of windows, curtain walls, storefronts, and doors, and miscellaneous penetrations of air barrier membrane with foam sealant.

H. Seal strips and transition strips around masonry reinforcing or ties and penetrations with termination mastic.

I. Seal exposed edges of strips at seams, cuts, penetrations, and terminations not concealed by metal counterflashings or ending in reglets with termination mastic.

J. Repair punctures, voids, and deficient lapped seams in strips and transition strips. Slit and flatten fishmouths and blisters. Patch with transition strips extending 6 inches (150 mm) beyond repaired areas in strip direction.

3.03 AIR BARRIER MEMBRANE INSTALLATION

A. Clean, prepare, treat, and seal substrate according to manufacturer's written instructions. Provide clean, dust-free, and dry substrate for air barrier application.

B. Apply air barrier membrane to form a seal with strips and transition strips and to achieve a continuous air barrier according to air barrier manufacturer's written instructions.

C. Apply air barrier membrane within manufacturer's recommended application temperature ranges.

D. Apply primer to substrates at required rate and allow to dry. Limit priming to areas that will be covered by air barrier sheet in same day. Reprime areas exposed for more than 24 hours.

1. Prime glass-fiber-surfaced gypsum sheathing with number of prime coats needed to achieve required bond, with adequate drying time between coats.

E. Apply a continuous unbroken air barrier to substrates according to the following minimum thickness. Apply membrane in full contact around protrusions such as masonry ties.

1. Vapor-Retarding Membrane Air Barrier: 40-mil (1.0-mm).
F. Apply strip and transition strip a minimum of 1 inch (25 mm) onto cured air membrane or strip and transition strip over cured air membrane overlapping 3 inches (75 mm) onto each surface according to air barrier manufacturer's written instructions.

G. Do not cover air barrier until it has been tested and inspected by Owner's testing agency.

H. Correct deficiencies in or remove air barrier that does not comply with requirements; repair substrates and reapply air barrier components.

3.04 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified testing agency to perform tests and inspections and prepare test reports.

B. Inspections: Air barrier materials and installation are subject to inspection for compliance with requirements.

C. Tests: Testing to be performed will be determined by Owner's testing agency as follows:
   1. Qualitative Testing: Air barrier assemblies will be tested for evidence of air leakage according to ASTM E1186, smoke pencil with pressurization or depressurization.

D. Remove and replace deficient air barrier components and retest as specified above.

3.05 PROTECTION

A. Protect air barrier system from damage during application and remainder of construction period, according to manufacturer's written instructions.
   1. Protect air barrier from exposure to UV light and harmful weather exposure as required by manufacturer. Remove and replace air barrier exposed for more than 60 days.

END OF SECTION 07 27 26
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes asphalt shingles and installation of roof shingles specified elsewhere.

B. Related Work specified elsewhere includes:
   1. Self-adhering sheet membrane underlayment, specified in Division 07 Section “Self-Adhering Sheet Waterproofing.”
   2. Roof shingles with integral photovoltaic collectors, specified in Division 26 Section “Photovoltaic Collectors.”

1.02 SUBMITTALS

A. Product Data: For each product indicated.

B. Samples: For asphalt shingles.

C. Product test reports.

D. Research/evaluation reports.

1.03 QUALITY ASSURANCE

A. Source Limitations: Obtain ridge and hip cap shingles felt underlayment through one source from a single asphalt shingle manufacturer.

B. Fire-Test-Response Characteristics: Provide asphalt shingle and related roofing materials with the fire-test-response characteristics indicated, as determined by testing identical products per test method below by UL or another testing and inspecting agency acceptable to authorities having jurisdiction. Identify materials with appropriate markings of applicable testing and inspecting agency.

   1. Exterior Fire-Test Exposure: Class A; ASTM E 108 or UL 790, for application and roof slopes indicated.

1.04 WARRANTY

A. Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace asphalt shingles that fail in materials within specified warranty period.

   1. Material Warranty Period: 30 years from date of Substantial Completion, prorated, with first 5 years nonprorated.

PART 2 - PRODUCTS

2.01 GLASS-FIBER-REINFORCED ASPHALT SHINGLES

1. Products:

2.02 UNDERLAYMENT MATERIALS

A. Self-Adhering Sheet Membrane Waterproofing: As specified in Division 07 Section, “Self-Adhering Sheet Waterproofing” for roof underlayment.

2.03 ACCESSORIES

A. Asphalt Roofing Cement: ASTM D 4586, Type II, asbestos free.

B. Roofing Nails: ASTM F 1667; aluminum, stainless-steel, copper, or hot-dip galvanized steel wire shingle nails, minimum 0.120-inch- (3-mm-) diameter, smooth shank, sharp-pointed, with a minimum 3/8-inch- (9.5-mm-) diameter flat head and of sufficient length to penetrate 3/4 inch (19 mm) into solid wood decking or extend at least 1/8 inch (3 mm) through OSB or plywood sheathing.
   1. Where nails are in contact with metal flashing, use nails made from same metal as flashing.

2.04 METAL FLASHING AND TRIM

A. Sheet Metal Flashing and Trim: Comply with requirements in Division 07 Section "Sheet Metal Flashing and Trim."
   1. Sheet Metal: Aluminum, mill finished.

B. Fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item.

PART 3 - EXECUTION

3.01 UNDERLAYMENT INSTALLATION

A. Self-Adhering Sheet Membrane Underlayment: Install self-adhering sheet membrane underlayment on roof deck in locations and as specified in Division 07 Section “Self-Adhering Sheet Waterproofing.”

3.02 METAL FLASHING INSTALLATION

A. General: Install metal flashings and other sheet metal to comply with requirements in Division 7 Section "Sheet Metal Flashing and Trim."
   1. Install metal flashings according to recommendations in ARMA's "Residential Asphalt Roofing Manual" and asphalt shingle recommendations in NRCA's "The NRCA Roofing and Waterproofing Manual."

3.03 ASPHALT SHINGLE INSTALLATION

B. Install first and remaining courses of asphalt shingles stair-stepping diagonally across roof deck with manufacturer's recommended offset pattern at succeeding courses, maintaining uniform exposure.
C. Fasten asphalt shingle strips with a minimum of five roofing nails located according to manufacturer's written instructions.

3.04 PHOTOVOLTAIC COLLECTOR SHINGLE INSTALLATION

END OF SECTION 07 31 13
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes: Wood panels, cementitious panels, wood louvers, and secondary support system for wall cladding system application.
   1. Aluminum clip and sub-girt secondary support system.

B. Related Sections: Section(s) related to this section include:
   1. Rough Carpentry: Division 06 Rough Carpentry Section.
   2. Air and moisture barriers: Division 07.

1.02 SYSTEM DESCRIPTION

A. Performance Requirements: Provide panels that have been manufactured, fabricated and installed to maintain performance criteria stated by manufacturer without defects, damage or failure.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer’s product data for specified products.

B. Shop Drawings: Submit shop drawings showing layout, profiles and product components, including edge conditions, panel joints, fixture location, anchorage, accessories, finish colors, patterns and textures.

C. Samples: Submit selection and verification samples for finishes, colors and textures.

1.04 QUALITY ASSURANCE

A. Qualifications:
   1. Manufacturer Qualifications: Manufacturer producing product in ISO 9001 certified facility, capable of providing field service representation during fabrication and approving application method.
      a. Obtain from a single manufacturer.
   2. Fabricator/Installer Qualifications: Installer shall be approved by the manufacturer and experienced in performing work of similar type and scope.

B. Delivery: Deliver materials in manufacturer’s original, unopened, undamaged containers with identification labels intact.

C. Storage and Protection: Store materials protected from exposure to harmful weather conditions, at temperature and humidity conditions recommended by manufacturer.

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify actual measurements/openings by field measurements before fabrication; show recorded measurements on shop drawings. Coordinate field measurements and fabrication schedule with construction progress to avoid construction delays.
1.06 WARRANTY

A. Manufacturer’s Warranty: Submit, for Owner’s acceptance, manufacturer’s standard warranty document executed by authorized company official. Manufacturer’s warranty is in addition to, and not a limitation of, other rights Owner may have under Contract Documents.

PART 2 - PRODUCTS

2.01 CEMENTITIOUS WALL PANELS

A. Fiber-Reinforced Cementitious Siding: Siding made from fiber-cement board that complies with ASTM C 1186, Type A, Grade II; is classified as noncombustible when tested according to ASTM E 136; and has a flame-spread index of 25 or less when tested according to ASTM E 84.
   1. Manufacturers: Subject to compliance with requirements, provide products from one of the following:
      a. American Fiber Cement Corporation “Minerit HD (Heavy Duty)”.
      b. CertainTeed Corp.
      c. James Hardie Inc.
   2. Panels 48 inches wide and 120 inches long with smooth texture.

B. Colors: Natural cement color.

C. Finish: Unfinished.

D. Panel Core: Fiber-reinforced cementitious panels.
   1. Panel Thickness: 1/4 inch (6 mm).
   2. Surface Impact Resistance: 9 lbf (40 N) index minimum.
   3. Scratch Resistance: 0.79 lbf (3.5 N) index minimum.
   4. Fire Performance: Maximum flamespread index of 5 per ASTM E 84 (Type I, Class A).
   5. Smoke Development Index: 5.
   6. Water Absorption: Less than 1.0%.

2.02 WOOD WALL PANELS

A. Wood Siding: Siding milled from Western Red Cedar as specified in Division 06 Section, “Exterior Finish Carpentry”.
   1. Panel Profile: Flat with smooth texture.

B. Wood Louvers: Louvers constructed from milled Western Red Cedar boards as specified in Division 06 Section, “Exterior Finish Carpentry” with smooth texture.
   1. Louver Profiles:
      a. Nearly horizontal louvers, evenly spaced, with slight slope to shed water.
      b. Sloped fixed louvers, evenly spaced.

C. Finish: Clear Sealer and finish.

2.03 ACCESSORIES

A. Supporting system; Fastening method: A complete, pre-engineered aluminum clip and sub-girt system, complying with the following requirements:
The panels are through-fastened to aluminum clips.
2. To ensure proper structural performance, the clips should be located at appoint equal to 20% of the length of the tile from the edge of the panel.
3. The aluminum clips must be fastened to horizontal aluminum sub-frame in order to maintain an accurate horizontal gap.
4. Panels must be capable of easy and fast assembly
5. The replacement of damaged panels, particularly in the middle sections, must be possible using simple methods and should not require special tools.
6. Under no circumstances shall it be possible to remove individual panels unless they are first destroyed.

2.04 FABRICATION
A. Fabricate wall panels and accessory items in accordance with manufacturer’s recommendations and approved submittals.
B. Fabricate panels to profiles indicated.

PART 3 - EXECUTION

3.01 EXAMINATION
A. Site Verification of Conditions: Verify substrate conditions, which have been previously installed under other sections, are acceptable for product installation in accordance with manufacturer’s instructions.

3.02 PREPARATION
A. Surface Preparation: Provide air and moisture barriers, insulation, and primary support structure with sheathing.

3.03 INSTALLATION
A. Comply with manufacturer’s product data, including product technical bulletins, product catalog installation instructions and product carton instructions for installation.
B. Install wall panels plumb and level and accurately spaced in accordance with manufacturer’s recommendations and approved submittals.
C. Fasten wall panels to supporting substrate with fasteners and adhesive approved for use with adjoining construction.
D. Accessory Items: Install corner profiles, gaskets and trim with fasteners and adhesive appropriate for use with adjoining construction as indicated on drawings and as recommended by manufacturer.

3.04 CLEANING
A. Cleaning: Remove temporary coverings and protection of adjacent work areas. Repair or replace damaged installed products. Clean installed products in accordance with manufacturer’s instructions prior to Owner’s acceptance. Remove construction debris from project site and legally dispose of debris.
3.05 PROTECTION

A. Protection: Protect installed product and finish surfaces from damage during construction.

END OF SECTION 07 42 33
PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:
1. Adhered ethylene-propylene-diene-monomer (EPDM) roofing system.
2. Vapor retarder.
3. Roof insulation.

B. Related Sections include the following:
1. Division 06 Section "Rough Carpentry" for wood nailers, curbs, and blocking; and for wood-based, structural-use roof deck panels.
2. Division 07 Section "Thermal Insulation" for insulation beneath the roof deck.
3. Division 07 Section "Sheet Metal Flashing and Trim" for metal roof penetration flashings, flashings, and counterflashings.
4. Division 07 Section "Joint Sealing."

1.03 DEFINITIONS

A. Roofing Terminology: Refer to ASTM D 1079 and glossary of NRCA's "The NRCA Roofing and Waterproofing Manual" for definition of terms related to roofing work in this Section.

1.04 PERFORMANCE REQUIREMENTS

A. General: Provide installed roofing membrane and base flashings that remain watertight; do not permit the passage of water; and resist specified uplift pressures, thermally induced movement, and exposure to weather without failure.

B. Material Compatibility: Provide roofing materials that are compatible with one another under conditions of service and application required, as demonstrated by roofing membrane manufacturer based on testing and field experience.

C. Roofing System Design: Provide a membrane roofing system that is identical to systems that have been successfully tested by a qualified testing and inspecting agency to resist uplift pressure calculated according to ASCE 7.

1.05 SUBMITTALS

A. Product Data: For each type of product indicated.

B. Warranties: Special warranties specified in this Section.
1.06 QUALITY ASSURANCE

A. Installer Qualifications: A qualified firm that is approved, authorized, or licensed by roofing system manufacturer to install manufacturer's product and that is eligible to receive manufacturer's warranty.

B. Source Limitations: Obtain components for membrane roofing system from same manufacturer as roofing membrane.

1.07 DELIVERY, STORAGE, AND HANDLING

A. Deliver roofing materials to Project site in original containers with seals unbroken and labeled with manufacturer's name, product brand name and type, date of manufacture, and directions for storing and mixing with other components.

B. Store liquid materials in their original undamaged containers in a clean, dry, protected location and within the temperature range required by roofing system manufacturer. Protect stored liquid material from direct sunlight.
   1. Discard and legally dispose of liquid material that cannot be applied within its stated shelf life.

C. Protect roof insulation materials from physical damage and from deterioration by sunlight, moisture, soiling, and other sources. Store in a dry location. Comply with insulation manufacturer's written instructions for handling, storing, and protecting during installation.

D. Handle and store roofing materials and place equipment in a manner to avoid permanent deflection of deck.

1.08 PROJECT CONDITIONS

A. Weather Limitations: Proceed with installation only when existing and forecasted weather conditions permit roofing system to be installed according to manufacturer's written instructions and warranty requirements.

1.09 WARRANTY

A. Special Warranty: Manufacturer's standard form, without monetary limitation, in which manufacturer agrees to repair or replace components of membrane roofing system that fail in materials or workmanship within specified warranty period. Failure includes roof leaks.
   1. Special warranty includes roofing membrane, base flashings, roofing accessories, roof insulation, fasteners, substrate board, vapor retarder, walkway products, and other components of membrane roofing system.
   2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 EPDM ROOFING MEMBRANE

A. EPDM Roofing Membrane: ASTM D 4637, Type I, non-reinforced uniform, flexible sheet made from EPDM, and as follows:
   1. Manufacturers:
      a. Carlisle SynTec Incorporated.
      b. Firestone Building Products Company.
2.02 AUXILIARY MATERIALS

A. General: Auxiliary materials recommended by roofing system manufacturer for intended use and compatible with membrane roofing.
   1. Liquid-type auxiliary materials shall meet VOC limits of authorities having jurisdiction.

B. Sheet Flashing: 60-mil- (1.5-mm-) thick EPDM, partially cured or cured, according to application.

C. Bonding Adhesive: Manufacturer's standard bonding adhesive.

D. Seaming Material: Single-component butyl splicing adhesive and splice cleaner.

E. Lap Sealant: Manufacturer's standard single-component sealant, color to match roofing membrane.

F. Water Cutoff Mastic: Manufacturer's standard butyl mastic sealant.

G. Metal Termination Bars: Manufacturer's standard predrilled stainless-steel or aluminum bars, approximately 1 by 1/8 inch (25 by 3 mm) thick; with anchors.

H. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening membrane to substrate, and acceptable to membrane roofing system manufacturer.

I. Miscellaneous Accessories: Provide pourable sealers, preformed cone and vent sheet flashings, preformed inside and outside corner sheet flashings, T-joint covers, in-seam sealants, termination reglets, cover strips, and other accessories.

J. Liquid coating, specifically formulated for coating EPDM roofing membrane, as follows:
   1. Type: Acrylic emulsion Hypalon.

2.03 SUBSTRATE BOARDS

A. Substrate Board: ASTM C 728, perlite board, 3/4 inch (19 mm) thick, seal coated.

2.04 VAPOR RETARDER

A. Laminated-Sheet Vapor Retarder: Kraft paper, 2 layers, laminated with asphalt and edge reinforced with woven fiberglass yarn with maximum permeance rating of 0.50 perm (29 ng/Pa x s x sq. m) and manufacturer's standard adhesive.

2.05 ROOF INSULATION

A. General: Provide preformed roof insulation boards that comply with requirements and referenced standards, selected from manufacturer's standard sizes and of thicknesses indicated.
B. Polyisocyanurate Board Insulation: ASTM C 1289, 1/2-inch Type III (perlite) or Type IV (cellulosic fiber) insulation board on one major surface and felt or glass-fiber mat facer on other major surface.
   1. Manufacturers:
      b. Carlisle SynTec Incorporated.
      c. Celotex Corporation.
      d. Firestone Building Products Company.
      e. GAF Materials Corporation.
      g. Koppers Industries.

C. Tapered Insulation: Provide factory-tapered insulation boards fabricated to slope of 1/4 inch per 12 inches (1:48), unless otherwise indicated.

D. Provide preformed saddles, crickets, tapered edge strips, and other insulation shapes where indicated for sloping to drain. Fabricate to slopes indicated.

2.06 INSULATION ACCESSORIES

A. General: Furnish roof insulation accessories recommended by insulation manufacturer for intended use and compatible with membrane roofing.

B. Fasteners: Factory-coated steel fasteners and metal or plastic plates meeting corrosion-resistance provisions in FMG 4470, designed for fastening roof insulation to substrate, and acceptable to roofing system manufacturer.

C. Cold Fluid-Applied Adhesive: Manufacturer's standard cold fluid-applied adhesive formulated to adhere roof insulation to substrate.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with the following requirements and other conditions affecting performance of roofing system:
   1. Verify that roof openings and penetrations are in place and set and braced and that roof drains are securely clamped in place.
   2. Verify that wood blocking, curbs, and nailers are securely anchored to roof deck at penetrations and terminations and that nailers match thicknesses of insulation.
   3. Verify that surface plane flatness and fastening of steel roof deck complies with requirements in Division 05 Section "Steel Deck."
   4. Verify that minimum concrete drying period recommended by roofing system manufacturer has passed.
   5. Verify that concrete substrate is visibly dry and free of moisture. Test for capillary moisture by plastic sheet method according to ASTM D 4263.
   6. Verify that concrete curing compounds that will impair adhesion of roofing components to roof deck have been removed.
   7. Proceed with installation only after unsatisfactory conditions have been corrected.
3.02 PREPARATION

A. Clean substrate of dust, debris, moisture, and other substances detrimental to roofing installation according to roofing system manufacturer's written instructions. Remove sharp projections.

B. Prevent materials from entering and clogging roof drains and conductors and from spilling or migrating onto surfaces of other construction. Remove roof-drain plugs when no work is taking place or when rain is forecast.

C. Complete terminations and base flashings and provide temporary seals to prevent water from entering completed sections of roofing system at the end of the workday or when rain is forecast. Remove and discard temporary seals before beginning work on adjoining roofing.

D. Install acoustical roof deck rib insulation strips, specified in Division 05 Section "Steel Deck," according to acoustical roof deck manufacturer's written instructions.

3.03 VAPOR-RETARDER INSTALLATION

A. Install laminate-sheet vapor retarder in a single layer over area to receive vapor retarder, side and end lapping each sheet a minimum of 2 inches (50 mm) and 6 inches (150 mm), respectively. Bond vapor retarder to deck as follows:
   1. Apply adhesive at rate recommended by vapor-retarder manufacturer. Seal laps with adhesive.

B. Completely seal vapor retarder at terminations, obstructions, and penetrations to prevent air movement into membrane roofing system.

3.04 INSULATION INSTALLATION

A. Coordinate installing membrane roofing system components so insulation is not exposed to precipitation or left exposed at the end of the workday.

B. Comply with membrane roofing system manufacturer's written instructions for installing roof insulation.

C. Install tapered insulation under area of roofing to conform to slopes indicated.

D. Install one or more layers of insulation under area of roofing to achieve required thickness. Where overall insulation thickness is 2 inches (50 mm) or greater, install 2 or more layers with joints of each succeeding layer staggered from joints of previous layer a minimum of 6 inches (150 mm) in each direction.

E. Trim surface of insulation where necessary at roof drains so completed surface is flush and does not restrict flow of water.

F. Install insulation with long joints of insulation in a continuous straight line with end joints staggered between rows, abutting edges and ends between boards. Fill gaps exceeding 1/4 inch (6 mm) with insulation.
   1. Cut and fit insulation within 1/4 inch (6 mm) of nailers, projections, and penetrations.

G. Mechanically Fastened and Adhered Insulation: Install each layer of insulation and secure first layer of insulation to deck using mechanical fasteners specifically designed and sized for fastening specified board-type roof insulation to deck type.
1. Fasten first layer of insulation to resist uplift pressure at corners, perimeter, and field of roof.
2. Install subsequent layers of insulation in a cold fluid-applied adhesive.

3.05 ADHERED ROOFING MEMBRANE INSTALLATION

A. Install roofing membrane over area to receive roofing according to membrane roofing system manufacturer's written instructions. Unroll roofing membrane and allow to relax before installing.

B. Start installation of roofing membrane in presence of membrane roofing system manufacturer's technical personnel.

C. Accurately align roofing membrane and maintain uniform side and end laps of minimum dimensions required by manufacturer. Stagger end laps.

D. Bonding Adhesive: Apply bonding adhesive to substrate and underside of roofing membrane at rate required by manufacturer and allow to partially dry before installing roofing membrane. Do not apply bonding adhesive to splice area of roofing membrane.

E. Mechanically or adhesively fasten roofing membrane securely at terminations, penetrations, and perimeter of roofing.

F. Apply roofing membrane with side laps shingled with slope of roof deck where possible.

G. Adhesive Seam Installation: Clean both faces of splice areas, apply splicing cement, and firmly roll side and end laps of overlapping roofing membranes according to manufacturer's written instructions to ensure a watertight seam installation. Apply lap sealant and seal exposed edges of roofing membrane terminations.

1. Apply a continuous bead of in-seam sealant before closing splice if required by membrane roofing system manufacturer.

H. Repair tears, voids, and lapped seams in roofing that does not meet requirements.

I. Spread sealant or mastic bed over deck drain flange at deck drains and securely seal roofing membrane in place with clamping ring.

J. Install roofing membrane and auxiliary materials to tie in to existing roofing.

3.06 FIELD QUALITY CONTROL

A. Testing Agency: Owner will engage a qualified independent testing and inspecting agency to perform roof tests and inspections and to prepare test reports.

B. Final Roof Inspection: Arrange for roofing system manufacturer's technical personnel to inspect roofing installation on completion and submit report to Architect.

1. Notify Architect or Owner 48 hours in advance of date and time of inspection.

C. Repair or remove and replace components of membrane roofing system where test results or inspections indicate that they do not comply with specified requirements.

D. Additional testing and inspecting, at Contractor's expense, will be performed to determine compliance of replaced or additional work with specified requirements.
3.07 PROTECTING AND CLEANING

A. Protect membrane roofing system from damage and wear during remainder of construction period. When remaining construction will not affect or endanger roofing, inspect roofing for deterioration and damage, describing its nature and extent in a written report, with copies to Architect and Owner.

B. Correct deficiencies in or remove membrane roofing system that does not comply with requirements, repair substrates and repair or reinstall membrane roofing system to a condition free of damage and deterioration at time of Substantial Completion and according to warranty requirements.

C. Clean overspray and spillage from adjacent construction using cleaning agents and procedures recommended by manufacturer of affected construction.

END OF SECTION 07 53 23
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes the following sheet metal flashing and trim:
   1. Formed roof drainage system.
   2. Formed wall flashing and trim.

B. Related Sections include the following:
   1. Division 06 Section "Rough Carpentry" for wood nailers, curbs, and blocking.
   2. Division 07 Section "Hot Fluid-Applied Waterproofing" for installing sheet metal flashing and trim integral with roofing membrane.
   3. Division 07 Section "Roof Accessories" for set-on-type curbs, equipment supports, roof hatches, vents, and other manufactured roof accessory units.
   4. Division 07 Section "Joint Sealing" for field-applied sheet metal flashing and trim sealants.

1.02 PERFORMANCE REQUIREMENTS

A. General: Install sheet metal flashing and trim to withstand wind loads, structural movement, thermally induced movement, and exposure to weather without failing, rattling, leaking, and fastener disengagement.

B. Water Infiltration: Provide sheet metal flashing and trim that do not allow water infiltration to building interior.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, dimensions of individual components and profiles, and finishes.

1.04 QUALITY ASSURANCE

A. Sheet Metal Flashing and Trim Standard: Comply with SMACNA's "Architectural Sheet Metal Manual". Conform to dimensions and profiles shown unless more stringent requirements are indicated.

1.05 COORDINATION

A. Coordinate installation of sheet metal flashing and trim with interfacing and adjoining construction to provide a leakproof, secure, and non-corrosive installation.

PART 2 - PRODUCTS

2.01 SHEET METALS

A. Aluminum Sheet: ASTM B 209 (ASTM B 209M), Alloy 3003, 3004, 3105, or 5005, Temper suitable for forming and structural performance required, but not less than H14, finished as follows:
1. **Mill Finish:** One-side bright.

   B. **Zinc-Coated (Galvanized) Steel Sheet:** ASTM A 653/A 653M, G90 (Z275) coating designation; structural quality, mill phosphatized for field painting.

2.02 **UNDERLAYMENT MATERIALS**

   A. **Slip Sheet:** Rosin-sized paper, minimum 3 lb/100 sq. ft. (0.16 kg/sq. m).

2.03 **MISCELLANEOUS MATERIALS**

   A. **General:** Provide materials and types of fasteners, solder, welding rods, protective coatings, separators, sealants, and other miscellaneous items as required for complete sheet metal flashing and trim installation.

   B. **Fasteners:** Wood screws, annular threaded nails, self-tapping screws, self-locking rivets and bolts, and other suitable fasteners designed to withstand design loads.

      1. **Nails for Copper Sheet:** Copper, hardware bronze, or Series 300 stainless steel, 0.109 inch (2.8 mm) minimum and not less than 7/8 inch (22 mm) long, barbed with large head.

      2. **Exposed Fasteners:** Heads matching color of sheet metal by means of plastic caps or factory-applied coating.

      3. **Fasteners for Flashing and Trim:** Blind fasteners or self-drilling screws, gasketed, with hex washer head.

      4. **Blind Fasteners:** High-strength aluminum or stainless-steel rivets.

      5. **Spikes and Ferrules:** Same material as gutter; with spike with ferrule matching internal gutter width.

   C. **Sealing Tape:** Pressure-sensitive, 100 percent solids, polyisobutylene compound sealing tape with release-paper backing. Provide permanently elastic, nonsag, nontoxic, nonstaining tape.

   D. **Elastomeric Sealant:** ASTM C 920, elastomeric polyurethane polymer sealant; of type, grade, class, and use classifications required to seal joints in sheet metal flashing and trim and remain watertight.

   E. **Butyl Sealant:** ASTM C 1311, single-component, solvent-release butyl rubber sealant, polyisobutylene plasticized, heavy bodied for hooked-type expansion joints with limited movement.

   F. **Asphalt Roofing Cement:** ASTM D 4586, asbestos free, of consistency required for application.

2.04 **FABRICATION, GENERAL**

   A. **General:** Custom fabricate sheet metal flashing and trim to comply with recommendations in SMACNA's "Architectural Sheet Metal Manual" that apply to design, dimensions, metal, and other characteristics of item indicated. Shop fabricate items where practicable. Obtain field measurements for accurate fit before shop fabrication.

   B. Fabricate sheet metal flashing and trim in thickness or weight needed to comply with performance requirements, but not less than that specified for each application and metal.
C. Fabricate sheet metal flashing and trim without excessive oil canning, buckling, and tool marks and true to line and levels indicated, with exposed edges folded back to form hems.
   2. Seams for Other Than Aluminum: Fabricate nonmoving seams in accessories with flat-lock seams. Tin edges to be seamed, form seams, and solder.

D. Sealed Joints: Form non-expansion but movable joints in metal to accommodate elastomeric sealant to comply with SMACNA recommendations.

E. Expansion Provisions: Where lapped or bayonet-type expansion provisions in the Work cannot be used, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25.4 mm) deep, filled with elastomeric butyl sealant concealed within joints.

F. Conceal fasteners and expansion provisions where possible on exposed-to-view sheet metal flashing and trim, unless otherwise indicated.

G. Fabricate cleats and attachment devices from same material as accessory being anchored or from compatible, non-corrosive metal.
   1. Thickness: As recommended by SMACNA's "Architectural Sheet Metal Manual" and FMG Loss Prevention Data Sheet 1-49 for application but not less than thickness of metal being secured.

2.05 ROOF DRAINAGE SHEET METAL FABRICATIONS

A. Hanging Gutters: Fabricate to cross section indicated, complete with end pieces, outlet tubes, and other accessories as required. Fabricate in minimum 96-inch- (2438-mm-) long sections. Furnish flat-stock gutter spacers and gutter brackets fabricated from same metal as gutters, of size recommended by SMACNA but not less than twice the gutter thickness. Fabricate expansion joints, expansion-joint covers, gutter bead reinforcing bars, and gutter accessories from same metal as gutters.
   1. Gutter Style: A.
   2. Expansion Joints: Lap type.
   3. Accessories: Continuous removable leaf screen with sheet metal frame and hardware cloth screen.
   4. Gutters with Girth up to 15 Inches (381 mm): Fabricate from the following material:
      a. Aluminum-Zinc Alloy-Coated Steel: 0.0217 inch (0.55 mm) thick.

B. Downspouts: Fabricate round downspouts complete with mitered elbows. Furnish with metal hangers, from same material as downspouts, and anchors.
   1. Manufactured Hanger Style: Concealed straps.
   2. Fabricate downspouts from the following material:
      a. Copper: 16 oz./sq. ft. (0.55 mm thick).
      b. Galvanized Steel: 0.0217 inch (0.55 mm) thick.

2.06 STEEP-SLOPE ROOF SHEET METAL FABRICATIONS

A. Valley Flashing: Fabricate from the following material:
   1. Prepainted, Metallic-Coated Steel: 0.0276 inch (0.7 mm) thick.

B. Drip Edges: Fabricate from the following material:
   1. Aluminum: 0.0320 inch (0.8 mm) thick.
C. Eave, Rake, Ridge, and Hip Flashing: Fabricate from the following material:
   1. Aluminum: 0.0320 inch (0.8 mm) thick.

D. Roof-Penetration Flashing: Fabricate from the following material:
   1. Lead: 4.0 lb/sq. ft. (1.6 mm thick), hard tempered.

2.07 WALL SHEET METAL FABRICATIONS

A. Through-Wall Flashing: Fabricate continuous flashings in minimum 96-inch- (2438-
mm-) long, but not exceeding 12 foot (3.6 m) long, sections, under copings, at shelf
angles, and where indicated. Fabricate discontinuous lintel, sill, and similar flashings to
extend 6 inches (152 mm) beyond each side of wall openings. Form with 2-inch- (51-
mm-) high end dams. Fabricate from the following material:
   1. Stainless Steel: 0.0156 inch (0.4 mm) thick.

B. Openings Flashing in Frame Construction: Fabricate head, sill, jamb, and similar
flashings to extend 4 inches (102 mm) beyond wall openings. Form head and sill
flashing with 2-inch- (51-mm-) high end dams. Fabricate from the following material:
   1. Aluminum-Zinc Alloy-Coated Steel: 0.0217 inch (0.55 mm) thick.

2.08 FINISHES

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products"
   for recommendations for applying and designating finishes.

B. Protect mechanical and painted finishes on exposed surfaces from damage by applying
   a strippable, temporary protective covering before shipping.

C. Appearance of Finished Work: Variations in appearance of abutting or adjacent pieces
   are acceptable if they are within one-half of the range of approved Samples. Noticeable
   variations in the same piece are not acceptable. Variations in appearance of other
   components are acceptable if they are within the range of approved Samples and are
   assembled or installed to minimize contrast.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, to verify actual
   locations, dimensions and other conditions affecting performance of work.
   1. Verify that substrate is sound, dry, smooth, clean, sloped for drainage, and
      securely anchored.
   2. Proceed with installation only after unsatisfactory conditions have been
      corrected.

3.02 INSTALLATION, GENERAL

A. General: Anchor sheet metal flashing and trim and other components of the Work
   securely in place, with provisions for thermal and structural movement. Use fasteners,
   solder, welding rods, protective coatings, separators, sealants, and other miscellaneous
   items as required to complete sheet metal flashing and trim system.
   1. Torch cutting of sheet metal flashing and trim is not permitted.

B. Metal Protection: Where dissimilar metals will contact each other or corrosive
   substrates, protect against galvanic action by painting contact surfaces with bituminous
coating or by other permanent separation as recommended by fabricator or manufacturers of dissimilar metals.

1. Coat side of uncoated aluminum, stainless-steel, and lead sheet metal flashing and trim with bituminous coating where flashing and trim will contact wood, ferrous metal, or cementitious construction.

2. Underlayment: Where installing metal flashing directly on cementitious or wood substrates, install a course of felt underlayment and cover with a slip sheet or install a course of polyethylene underlayment.

C. Install exposed sheet metal flashing and trim without excessive oil canning, buckling, and tool marks.

D. Install sheet metal flashing and trim true to line and levels indicated. Provide uniform, neat seams with minimum exposure of solder, welds, and elastomeric butyl sealant.

E. Install sheet metal flashing and trim to fit substrates and to result in watertight performance. Verify shapes and dimensions of surfaces to be covered before fabricating sheet metal.

1. Space cleats not more than 12 inches (305 mm) apart. Anchor each cleat with two fasteners. Bend tabs over fasteners.

F. Expansion Provisions: Provide for thermal expansion of exposed flashing and trim. Space movement joints at a maximum of 10 feet (3 m) with no joints allowed within 24 inches (610 mm) of corner or intersection. Where lapped or bayonet-type expansion provisions cannot be used or would not be sufficiently watertight, form expansion joints of intermeshing hooked flanges, not less than 1 inch (25.4 mm) deep, filled with elastomeric butyl sealant concealed within joints.

G. Fasteners: Use fasteners of sizes that will penetrate substrate not less than 1-1/4 inches (32 mm) for nails and not less than 3/4 inch (19 mm) for wood screws.

1. Galvanized or Prepainted, Metallic-Coated Steel: Use stainless-steel fasteners.
2. Aluminum: Use aluminum or stainless-steel fasteners.
3. Copper: Use copper, hardware bronze, or stainless-steel fasteners.

H. Seal joints with elastomeric butyl sealant as required for watertight construction.

1. Where sealant-filled joints are used, embed hooked flanges of joint members not less than 1 inch (25.4 mm) into sealant. Form joints to completely conceal sealant. When ambient temperature at time of installation is moderate, between 40 and 70 deg F (4 and 21 deg C), set joint members for 50 percent movement either way. Adjust setting proportionately for installation at higher ambient temperatures. Do not install sealant-type joints at temperatures below 40 deg F (4 deg C).

2. Prepare joints and apply sealants to comply with requirements in Division 07 Section “Joint Sealing”.

I. Aluminum Flashing: Rivet or weld joints in uncoated aluminum where necessary for strength.

3.03 ROOF DRAINAGE SYSTEM INSTALLATION

A. General: Install sheet metal roof drainage items to produce complete roof drainage system according to SMACNA recommendations and as indicated. Coordinate installation of roof perimeter flashing with installation of roof drainage system.
B. Hanging Gutters: Join sections with riveted and soldered joints or with lapped joints sealed with elastomeric butyl sealant. Provide for thermal expansion. Attach gutters at eave or fascia to firmly anchored gutter brackets and straps spaced not more than 36 inches (914 mm) apart. Provide end closures and seal watertight with sealant. Slope to downspouts.

1. Fasten gutter spacers to front and back of gutter.
2. Loosely lock straps to front gutter bead and anchor to roof deck.
3. Anchor and loosely lock back edge of gutter to continuous cleat eave or apron flashing.
4. Anchor back of gutter that extends onto roof deck with cleats spaced not more than 24 inches (610 mm) apart.
5. Anchor gutter with spikes and ferrules spaced not more than 24 inches (610 mm) apart.
6. Install gutter with expansion joints at locations indicated but not exceeding 50 feet (15.24 m) apart. Install expansion joint caps.
7. Install continuous gutter screens on gutters with non-corrosive fasteners, removable for cleaning gutters.

C. Downspouts: Join sections with 1-1/2-inch (38-mm) telescoping joints. Provide fasteners designed to hold downspouts securely 1 inch (25.4 mm) away from walls; locate fasteners at top and bottom and at approximately 60 inches (1524 mm) o.c. in between.

1. Provide elbows at base of downspout to direct water away from building.
2. Connect downspouts to underground drainage system indicated.

3.04 ROOF FLASHING INSTALLATION

A. General: Install sheet metal roof flashing and trim to comply with performance requirements, sheet metal manufacturer's written installation instructions, and SMACNA's "Architectural Sheet Metal Manual". Provide concealed fasteners where possible, set units true to line, and level as indicated. Install work with laps, joints, and seams that will be permanently watertight.

B. Roof Edge Flashing: Anchor to resist uplift and outward forces according to recommendations in FMG Loss Prevention Data Sheet 1-49 for specified wind zone and as indicated.

1. Interlock bottom edge of roof edge flashing with continuous cleats anchored to substrate at 16-inch (406-mm) centers.

C. Roof-Penetration Flashing: Coordinate installation of roof-penetration flashing with installation of roofing and other items penetrating roof. Install flashing as follows:

1. Turn lead flashing down inside vent piping, being careful not to block vent piping with flashing.
2. Seal with elastomeric butyl sealant and clamp flashing to pipes penetrating roof except for lead flashing on vent piping.

3.05 WALL FLASHING INSTALLATION

A. General: Install sheet metal wall flashing to intercept and exclude penetrating moisture according to SMACNA recommendations and as indicated. Coordinate installation of wall flashing with installation of wall-opening components such as windows, doors, and louvers.

B. Through-Wall Flashing: Installation of formed through-wall flashing is specified in Division 04 Section "Unit Masonry".
C. Openings Flashing in Frame Construction: Install continuous head, sill, jamb, and similar flashings to extend 4 inches (102 mm) beyond wall openings.

3.06 CLEANING AND PROTECTION

A. Clean exposed metal surfaces of substances that interfere with uniform oxidation and weathering.

B. Clean and neutralize flux materials. Clean off excess solder and sealants.

C. Remove temporary protective coverings and strippable films as sheet metal flashing and trim are installed. On completion of installation, clean finished surfaces, including removing unused fasteners, metal filings, pop rivet stems, and pieces of flashing. Maintain in a clean condition during construction.

D. Replace sheet metal flashing and trim that have been damaged or that have deteriorated beyond successful repair by finish touchup or similar minor repair procedures.

END OF SECTION 07 62 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data and Product Samples.

B. Warranties: Provide manufacturer's standard written warranty, signed by manufacturer agreeing to promptly repair or replace roof specialties that show evidence of deterioration of factory-applied finishes within 5 years from date of Substantial Completion.

C. SPRI Wind Design Standard: Provide roof-edge flashings tested according to SPRI ES-1 and capable of resisting the following design pressures:
   1. Design Pressure: ANSI/SPRI ES-1 Test Method RE-1 Test for Roof Edge Termination of Single-Ply Roofing Membranes: The fascia system shall be tested to secure the membrane to minimum 100 lbs./ft.

PART 2 - PRODUCTS

2.01 ROOF SPECIALTIES

A. Siding Vents: heat resistant polypropylene
   1. Cor-A-Vent SV-5 Siding Vent
      a. ¼” x 3” x 4’ heat resistant polypropylene siding vent, 8.5 sq. in. NFVA per lineal foot

B. Gutters and Downspouts
   1. Guttersupply Aluminum Downspouts
      a. 2” x 3” Aluminum downspout, .019” gauge, Almond color
   2. Guttersupply Aluminum Elbows
      a. 2” x 3” A style Aluminum elbow, .019” gauge, Almond color
   3. Guttersupply Aluminum Outlets
      a. Wide flange rectangular Aluminum outlet
      b. Manufactured to fit 2” x 3” downspout
   4. Guttersupply PVC Adapter
      a. 2” x 3” x 3” Flush Downspout Tile Adapter
      b. Manufactured to connect a 2” x 3” downspout to a 3” PVC pipe
      c. http://www.guttersupply.com/p-tile-adapter-2x3x3-Flush-Downspout-Ad.gstml

2.02 ACCESSORIES

A. Aluminum Extrusions: ASTM B 221 (ASTM B 221M), alloy and temper as recommended by manufacturer for use and finish indicated.
B. Aluminum Finish: Mill finish

C. Fasteners: Manufacturer’s recommended fasteners, suitable for application and designed to meet performance requirements.
   2. Fasteners for Aluminum: Aluminum or Series 300 stainless steel.
   3. Fasteners for Zinc-Coated (Galvanized) Steel Sheet: Series 300 stainless steel or hot-dip zinc-coated steel.

D. Butyl Sealant: ASTM C 1311, solvent-release butyl rubber sealant.

E. Bituminous Coating: Cold-applied asphalt emulsion complying with ASTM D 1187.

2.03 FINISHES

A. Finish to be selected by Architect from manufacturer’s full range of standard colors.

PART 3 - EXECUTION

3.01 INSTALLATION

A. General: Install roof specialties according to manufacturer's written instructions. Anchor roof specialties securely in place, with provisions for thermal and structural movement.

B. Coat back side of aluminum and stainless-steel roof specialties with bituminous coating where they will contact wood, ferrous metal, or cementitious construction.

C. Bed flanges in thick coat of asphalt roofing cement where required by manufacturers of roof specialties for waterproof performance.

D. Space movement joints at a maximum of 12 feet (3.6 m) with no joints within 24 inches (609.6 mm) of corners or intersections unless indicated.

E. Fastener Sizes: Use fasteners of sizes that will penetrate substrate not less than recommended by fastener manufacturer to achieve maximum pull-out resistance.

END OF SECTION 07 71 00
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes but is not limited to interior and exterior horizontal and vertical joint sealing.

B. Related Sections
   1. Division 08 Section “Hollow Metal Doors and Frames.”
   2. Division 08 Section “Glazing.”
   3. Division 09 Section “Gypsum Board.”
   4. Division 10 Section “Toilet and Bath Accessories.”

1.02 SYSTEM PERFORMANCE REQUIREMENTS

A. Provide joint sealants that have been produced and installed to establish and maintain continuous seals that cause no staining or deterioration of joint substrates.

1.03 SUBMITTALS

A. Product data from manufacturers for each joint sealant product required.
   1. Certification by joint sealant manufacturer that sealants plus the primers and cleaners required for sealant installation comply with local regulations controlling use of volatile organic compounds.

B. Samples for initial selection purposes in form of manufacturer's standard bead samples, consisting of strips of actual products showing full range of colors available, for each product exposed to view.

C. Samples for verification purposes of each type and color of joint sealant required. Install joint sealant samples in 1/2-inch-wide joints formed between two 6-inch-long strips of material matching the appearance of exposed surfaces adjacent to joint sealants.

1.04 QUALITY ASSURANCE

A. Installer Qualifications: Engage an experienced Installer who has completed joint sealant applications similar in material, design, and extent to that indicated for Project that have resulted in construction with a record of successful in-service performance.

B. Single Source Responsibility for Joint Sealant Materials: Obtain joint sealant materials from a single manufacturer for each different product required.

1.05 DELIVERY, STORAGE AND HANDLING

A. Deliver materials to Project site in original unopened containers or bundles with labels indicating manufacturer, product name and designation, color, expiration period for use, pot life, curing time, and mixing instructions for multi-component materials.
B. Store and handle materials in compliance with manufacturer's recommendations to prevent their deterioration or damage due to moisture, high or low temperatures, contaminants, or other causes.

1.06 PROJECT CONDITIONS

A. Environmental Conditions: Do not proceed with installation of joint sealants under the following conditions:
   1. When ambient and substrate temperature conditions are outside the limits permitted by joint sealant manufacturer or below 40 deg F (4.4 deg C).
   2. When joint substrates are wet.

B. Joint Width Conditions: Do not proceed with installation of joint sealants where joint widths are less than allowed by joint sealant manufacturer for application indicated.

C. Joint Substrate Conditions: Do not proceed with installation of joint sealants until contaminants capable of interfering with their adhesion are removed from joint substrates.

1.07 SEQUENCING AND SCHEDULING

A. Sequence installation of joint sealants to occur not less than 21 nor more than 30 days after completion of waterproofing, unless otherwise indicated.

PART 2 - PRODUCTS

2.01 MATERIALS, GENERAL

A. VOC Content of Interior Sealants: Provide sealants and sealant primers for use inside the weatherproofing system that comply with the following limits for VOC content when calculated according to 40 CFR 59, Part 59, Subpart D (EPA Method 24):
   1. Architectural Sealants: 250 g/L.
   2. Sealant Primers for Nonporous Substrates: 250 g/L.
   3. Sealant Primers for Porous Substrates: 775 g/L.

B. Compatibility: Provide joint sealants, joint fillers, and other related materials that are compatible with one another and with joint substrates under conditions of service and application, as demonstrated by sealant manufacturer based on testing and field experience.

C. Colors: Provide color of exposed joint sealants to comply with the following:
   1. Provide selections made by Architect from manufacturer's full range of standard colors for products of type indicated.

2.02 ELASTOMERIC JOINT SEALANTS

A. Elastomeric Sealant Standard: Provide manufacturer's standard chemically curing elastomeric sealants that comply with ASTM C 920, including those requirements referencing ASTM C 920 classifications for Type, Grade, Class, and Uses.

B. One-Part Neutral Cure Silicone Sealant: Type S; Grade NS; Class 25; where specifically approved by the Architect.
   1. Additional Capability: When tested per ASTM C 719, to withstand 50 percent increase and decrease of joint width as measured at time of application.
   2. Products
      a. "Dow Corning 795"; Dow Corning Corp.
      b. "Dow Corning 790"; Dow Corning Corp.
e. "895 Silicone"; Pecora Corp.
f. "Spectrum 2"; Tremco, Inc.

C. Two-Part Gunnable Polyurethane Sealant: Type M; Grade NS; Class 25.
   1. Products
      a. "Dymeric"; Tremco, Inc.
      b. "Dynatrol II"; Pecora Corp.

D. Acrylic Sealant: Manufacturer's standard one-part, nonsag, solvent-release-curing acrylic terpolymer sealant complying with AAMA 808.3 or FS TT-S-00230 or both, with capability when tested for adhesion and cohesion under maximum cyclic movement per ASTM C 719, to withstand the following percentage change in joint width existing at time of application and remain adhered to joint substrates indicated for Project without failing cohesively:
   1. 7-1/2 percent movement in both extension and compression for a total of 15 percent.
   2. Products:
      a. "60+Unicrylic," Pecora Corp.
      b. "PTI 738," Protective Treatments, Inc.
      c. "PTI 767," Protective Treatments, Inc.

E. Butyl Sealant: Manufacturer's standard one-part, nonsag, solvent-release-curing, polymerized butyl sealant complying with ASTM C 1085 and formulated with minimum of 75 percent solids to be nonstaining, paintable, and have a tack-free time of 24 hours or less.
   1. Products:
      b. "PTI 757," Protective Treatments, Inc.

2.03 LATEX JOINT SEALANTS

A. General: Provide manufacturer's standard one-part, nonsag, mildew-resistant, paintable latex sealant of formulation indicated that is recommended for exposed applications on interior and protected exterior locations and that accommodates indicated percentage change in joint width existing at time of installation without failing either adhesively or cohesively.

B. Acrylic-Emulsion Sealant: Provide product complying with ASTM C 834 that accommodates joint movement of not more than 5 percent in both extension and compression for a total of 10 percent.

C. Silicone Emulsion Sealant: Provide product complying with ASTM C 834 and, except for weight loss measured per ASTM C 792, with ASTM C 920 that accommodates joint movement of not more than 25 percent in both extension and compression for a total of 50 percent.

D. Products: Subject to compliance with requirements, latex joint sealants that may be incorporated in the Work include, but are not limited to, the following:
   1. Acrylic-Emulsion Sealant:
      c. "Tremco Acrylic Latex 834," Tremco, Inc.
2. Silicone-Emulsion Sealant:

2.04 ACOUSTICAL JOINT SEALANTS

A. Acoustical Sealant: Manufacturer's standard nonsag, paintable, nonstaining latex sealant complying with ASTM C 834 and the following requirements:
   1. Product is effective in reducing airborne sound transmission through perimeter joints and openings in building construction as demonstrated by testing representative assemblies per ASTM E 90.

B. Acoustical Sealant for Concealed Joints: Manufacturer's standard, nondrying, nonhardening, nonskinning, nonstaining, gunnable, synthetic rubber sealant recommended for sealing interior concealed joints to reduce transmission of airborne sound.

C. Products: Subject to compliance with requirements, acoustical joint sealants that may be incorporated in the Work include, but are not limited to, the following:
   1. Acoustical Sealant:
   2. Acoustical Sealant for Concealed Joints:

2.05 MISCELLANEOUS MATERIALS

A. Joint Cleaners: Provide joint cleaning compounds as recommended by sealant manufacturer(s).

B. Joint Prime Sealer: Provide type(s) of joint primers as recommended by sealant manufacturer(s).

PART 3 - EXECUTION

3.01 PRE-INSTALLATION MEETING

A. Prior to all work of this Section, schedule a job site pre-installation meeting to review the procedures and time schedule proposed for installation of all sealant work.

B. Present at meeting shall be Contractor, Architect, Installer, sealant manufacturer's technical representative and other trades involved in coordination with sealant work.

3.02 SURFACE CONDITIONS

A. Prior to work of this Section, carefully inspect the installed work of other trades and verify that such work is complete to point where this installation may properly commence. In the event of discrepancy do not proceed with installation until all such discrepancies have been fully resolved.

3.03 JOINT SURFACE PREPARATION

A. Clean joint surfaces immediately before installation of sealant. Remove dirt, insecure coatings, moisture and other substances which would interfere with bond of sealant.
B. For polyurethane sealants, do not proceed with installation of sealant over joint surfaces which have been painted, lacquered, waterproofed or treated with water repellent or other treatment or coating unless a laboratory test for durability (adhesion), in compliance with Paragraph 4.3.9 of FS TT-S-227 has successfully demonstrated that sealant bond is not impaired by the coating or treatment. If laboratory test has not been performed, or shows bond interference, remove coating or treatment from joint surfaces before installing sealant.

C. Etch concrete surfaces to remove excess alkalinity, unless sealant manufacturer's printed instructions indicate that alkalinity does not interfere with sealant bond and performance. Etch with 5% solution of muriatic acid; neutralize with dilute ammonia solution, rinse thoroughly with water and allow to dry before sealant installation.

D. Roughen joint surfaces on non-porous materials, wherever sealant manufacturer's data indicates lower bond strength than for porous surfaces. Rub with fine abrasive cloth or wool to produce a dull sheen.

3.04 INSTALLATION

A. Comply with sealant manufacturer's printed instructions except where more stringent requirements are shown or specified and except where manufacturer's technical representative directs otherwise.

B. Prime or seal the joint surfaces wherever recommended by the sealant manufacturer. Do not allow primer/sealer to spill or migrate onto adjoining surfaces.

C. Install sealant backer rod for liquid elastomeric sealants, except where shown to be omitted or recommended to be omitted by sealant manufacturer for the application shown.

D. Install bond breaker tape wherever shown and wherever required by manufacturer's recommendations to ensure that elastomeric sealants will perform properly.

E. Employ only proven installation techniques, which will ensure that sealants will be deposited in uniform, continuous ribbons without gaps or air pockets, with complete "wetting" of the joint bond surfaces equally on opposite sides. Except as otherwise indicated, fill sealant rabbet to a slightly concave surface, slightly below adjoining surfaces. Where horizontal joints are between a horizontal surface and a vertical surface, fill joint to form a slight cove, so that joint will not trap moisture and dirt.

F. Install sealants to depths as shown or, if not shown, as recommended by sealant manufacturer but within the following general limitations, measured at center section of bead.
   1. For normal moving joints sealed with one component silicone sealants, but not subject to traffic, fill joints to a depth equal to 50% of joint width, but neither more than 1/2" deep nor less than 1/4" deep.
   2. For joints sealed with acrylic-latex sealant, fill joints to a depth in the range of 75% to 125% of joint width.

G. Spillage: Do not allow sealants or compounds to overflow or spill onto adjoining surfaces, or to migrate into the voids of adjoining surfaces. Use masking tape or other precautionary devices to prevent staining of adjoining surfaces, by either the primer/sealer or the sealant compound.

H. Remove excess and spillage of compounds promptly as work progresses. Clean adjoining surfaces by whatever means may be necessary to eliminate evidence of spillage, without damage to adjoining surfaces or finishes.
I. Installation of Preformed Foam Sealants: Install each length of sealant immediately after removing protective wrapping, taking care not to pull or stretch material, and complying with sealant manufacturer's directions for installation methods, materials and tools which produce seal continuity at ends, turns, and intersections of joints. For application at low ambient temperatures where expansion of sealant requires acceleration to produce seal, apply heat to sealant in conformance with sealant manufacturer's recommendations.

3.05 CURE AND PROTECTION

A. Cure sealant compounds in compliance with manufacturer's instructions and recommendations, in order to obtain high early bond strength, cohesive strength and surface durability.

B. Adopt procedures as required for the curing and protection of sealants and caulking compounds during construction period, so that they will be without deterioration or damage (other than normal wear and weathering) at time of Owner's acceptance.

END OF SECTION 07 92 00
PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 1 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section references specification sections relating to commercial door hardware for the following:

1. Swinging doors.
2. Sliding Doors.
3. Other doors to the extent indicated.

B. Commercial door hardware includes, but is not necessarily limited to, the following:

1. Mechanical door hardware.
2. Electromechanical and access control door hardware.
3. Electromechanical and access control door hardware power supplies, back-ups and surge protection.
4. Automatic operators.
5. Cylinders specified for doors in other sections.

C. Related Sections:

1. Division 08 Section “Hollow Metal Doors and Frames”.
2. Division 08 Sections “Flush and Clad Wood Doors”.
3. Division 08 Section “Stile and Rail Wood Doors”.
4. Division 08 Section “Integrated Door Opening Assemblies”.
5. Division 08 Section “Door Hardware”.
6. Division 08 Section “Automatic Door Operators”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

6. NFPA 105 - Installation of Smoke Door Assemblies.
7. State Building Codes, Local Amendments.

E. Standards: Reference Related Sections for requirements regarding compliance with applicable industry standards.
1.03 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.

1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."

2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:
   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
   e. Explanation of abbreviations, symbols, and codes contained in schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for locksets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders.

D. Product Test Reports: Indicating compliance with cycle testing requirements, based on evaluation of comprehensive tests performed by manufacturer and witnessed by a qualified independent testing agency.

E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware and their nearest service representatives. The final copies delivered after completion of the installation test to include "as built" modifications made during installation, checkout, and acceptance.
Warranties and Maintenance: Special warranties and maintenance agreements specified in the Related Sections.

1.04 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum [5] years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Installer Qualifications: Installers, trained by the primary product manufacturers, with a minimum [3] years documented experience installing both standard and electrified builders hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum [5] years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor in good standing by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

D. Source Limitations: Obtain each type and variety of Door Hardware specified in the Related Sections from a single source, qualified supplier unless otherwise indicated.

E. Regulatory Requirements: Comply with NFPA 70, NFPA 80, NFPA 101 and ANSI A117.1 requirements and guidelines as directed in the applicable model building code.

F. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1.05 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keving Conference".

1.06 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified
hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door and Frame Preparation: Division 08 Sections (Steel, Aluminum and Wood) doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.07 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

1.08 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

PART 2 - PRODUCTS

2.01 SCHEDULED DOOR HARDWARE

A. Refer to “PART 3 – EXECUTION” for required specification sections.

PART 3 - EXECUTION

3.01 DOOR HARDWARE SETS

A. The door hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

B. The supplier is responsible for handing and sizing all products as listed in the door hardware sets. Quantities listed are for each pair of doors, or for each single door.

C. Products listed in the Door Hardware Sets must meet the requirements described in the specification sections noted.

1. Section 08 71 00 – Door Hardware.

D. Manufacturer’s Abbreviations:

1. MK - McKinney
2. YA - Yale
3. RO - Rockwood
4. PE - Pemko
5. EZ – EZY Jamb

END OF SECTION 08 06 71
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:

1. Standard and custom hollow metal doors and frames.
2. Steel sidelight, borrowed lite and transom frames.
3. Louvers installed in hollow metal doors.
4. Light frames and glazing installed in hollow metal doors.

B. Related Sections:

1. Division 04 Section "Unit Masonry" for embedding anchors for hollow metal work into masonry construction.
2. Division 08 Section “Flush Wood Doors”.
3. Division 08 Section "Glazing" for glass view panels in hollow metal doors.
4. Division 08 Section "Door Hardware”.
5. Division 09 Sections "Exterior Painting" and "Interior Painting" for field painting hollow metal doors and frames.

C. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.

1. ANSI/SDI A250.8 - Recommended Specifications for Standard Steel Doors and Frames.
2. ANSI/SDI A250.4 - Test Procedure and Acceptance Criteria for Physical Endurance for Steel Doors, Frames, Frames Anchors and Hardware Reinforcing.
3. ANSI/SDI A250.6 - Recommended Practice for Hardware Reinforcing on Standard Steel Doors and Frames.
4. ANSI/SDI A250.10 - Test Procedure and Acceptance Criteria for Prime Painted Steel Surfaces for Steel Doors and Frames.
5. ANSI/SDI A250.11 - Recommended Erection Instructions for Steel Frames.
6. ASTM A1008 - Standard Specification for Steel Sheet, Cold-Rolled, Carbon, Structural, High-Strength Low-Alloy and High-Strength Low-Alloy with Improved Formability.
7. ASTM A653 - Standard Specification for Steel Sheet, Zinc-Coated (Galvanized) or Zinc-Iron Alloy-Coated (Galvannealed) by the Hot-Dip Process.
10. ANSI/BHMA A156.15 - Hardware Preparation in Steel Doors and Frames.
15. UL 10C - Positive Pressure Fire Tests of Door Assemblies.

1.02 SUBMITTALS

A. Product Data: For each type of product indicated. Include construction details, material descriptions, door descriptions, hardware reinforcements, profiles, anchors, fire-resistance rating, and finishes.

B. Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the steel door and frame supplier in order to prepare the doors and frames to receive the finish hardware items.

C. Shop Drawings: Include the following:
   1. Elevations of each door design.
   2. Details of doors, including vertical and horizontal edge details and metal thicknesses.
   3. Frame details for each frame type, including dimensioned profiles and metal thicknesses.
   4. Locations of reinforcement and preparations for hardware.
   5. Details of anchorages, joints, field splices, and connections.
   6. Details of accessories.
   7. Details of moldings, removable stops, and glazing.
   8. Details of conduit and preparations for power, signal, and control systems.

D. Samples for Verification:
   1. Samples are only required by request of the architect and for manufacturers that are not current members of the Steel Door Institute.

1.03 QUALITY ASSURANCE

A. Source Limitations: Obtain hollow metal doors and frames through one source from a single manufacturer wherever possible.

B. Quality Standard: In addition to requirements specified, comply with ANSI/SDI A250.8, latest edition, "Recommended Specifications for Standard Steel Doors and Frames".

C. Fire-Rated Door Assemblies: Assemblies complying with NFPA 80 that are listed and labeled by a qualified testing agency, for fire-protection ratings indicated, based on testing at positive pressure according to NFPA 252 (neutral pressure at 40” above sill) or UL 10C.

1. Oversize Fire-Rated Door Assemblies Construction: For units exceeding sizes of tested assemblies, attach construction label certifying doors are built to standard construction requirements for tested and labeled fire rated door assemblies except for size.
2. Temperature-Rise Limit: Where indicated and at vertical exit enclosures (stairwell openings) and exit passageways, provide doors that have a maximum transmitted temperature end point of not more than 450 deg F (250 deg C) above ambient after 30 minutes of standard fire-test exposure.
   a. Smoke "S" Label: Doors to bear “S” label, and include smoke and draft control gasketing applied to frame and on meeting stiles of pair doors.

D. Fire-Rated, Borrowed-Light Frame Assemblies: Assemblies complying with NFPA 80 that are listed and labeled, by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire-protection ratings indicated, based on testing according to NFPA 257. Provide labeled glazing material.

E. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for installing hollow metal doors and frames and to verify installation of electrical knockout boxes and conduit at frames with electrified or access control hardware.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver hollow metal work palletized, wrapped, or crated to provide protection during transit and Project site storage. Do not use non-vented plastic.

B. Deliver welded frames with two removable spreader bars across bottom of frames, tack welded to jambs and mullions.

C. Store hollow metal work under cover at Project site. Place in stacks of five units maximum in a vertical position with heads up, spaced by blocking, on minimum 4-inch high wood blocking. Do not store in a manner that traps excess humidity.

1. Provide minimum 1/4-inch space between each stacked door to permit air circulation. Door and frames to be stacked in a vertical upright position.

1.05 PROJECT CONDITIONS

A. Field Measurements: Verify actual dimensions of openings by field measurements before fabrication.

1.06 COORDINATION

A. Coordinate installation of anchorages for hollow metal frames. Furnish setting drawings, templates, and directions for installing anchorages, including sleeves, concrete inserts, anchor bolts, and items with integral anchors. Deliver such items to Project site in time for installation.

1.07 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

B. Warranty includes installation and finishing that may be required due to repair or replacement of defective doors.
PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. CECO Door Products.
2. Curries Company.

2.02 MATERIALS

A. Cold-Rolled Steel Sheet: ASTM A 1008/A 1008M, Commercial Steel (CS), Type B; suitable for exposed applications.

B. Metallic-Coated Steel Sheet: ASTM A 653/A 653M, Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

C. Frame Anchors: ASTM A 653/A 653M, Commercial Steel (CS), Commercial Steel (CS), Type B; with minimum G60 (Z180) or A60 (ZF180) metallic coating.

2.03 ENERGY-EFFICIENT HOLLOW METAL DOORS

a. General: Provide 1-3/4 inch doors of design specified, not less than thickness indicated; fabricated with smooth surfaces, without visible joints or seams on exposed faces unless otherwise indicated. Comply with ANSI/SDI A250.8 and ANSI/NAAMM HMMA 867.

A. Energy Efficient Exterior Doors: Face sheets fabricated of commercial quality hot-dipped zinc coated steel that complies with ASTM A924 A60. Provide doors complying with requirements indicated below by referencing ANSI/SDI A250.8 for level and model, ANSI/SDI A250.4 for physical performance level, and HMMA 867 for door construction.

1. Design: Flush panel.
2. Core Construction: Foamed in place polyurethane and steel stiffened laminated core with no stiffener face welds, in compliance with HMMA 867 "Laminated Core”.
   a. Provide 22 gauge steel stiffeners at 6 inches on-center internally welded at 5” on-center to integral core assembly, foamed in place polyurethane core chemically bonded to all interior surfaces. No stiffener face welding is permitted.
   b. Thermal properties to rate at a fully operable minimum U-Factor 0.29 and R-Value 3.4, including insulated door, thermal-break frame and threshold.

   1) Kerf Type Frames: Thermal properties to rate at a fully operable minimum U-Factor 0.36 and R-Value 2.7, including insulated door, kerf type frame, and threshold.

3. Level/Model: Level 2 and Physical Performance Level A (Heavy Duty), Minimum 18 gauge (0.042 inch - 1.1-mm) thick steel, Model 2.
4. Vertical Edges: Vertical edges to be mechanically interlocked with hairline seam. Beveled Lock Edge, 1/8 inch in 2 inches (3 mm in 50 mm).
5. Top and Bottom Edges: Reinforce tops and bottoms of doors with a continuous steel channel not less than 16 gauge, extending the full width of the door and welded to the face sheet. Doors with an inverted top channel to include a steel closure channel, screw attached, with the web of the channel flush with the face sheets of the door. Plastic or composite channel fillers are not acceptable.

6. Hinge Reinforcement: Minimum 7 gauge (3/16") plate 1-1/4" x 9".

7. Hardware Reinforcements: Fabricate according to ANSI/SDI A250.6 with reinforcing plates from same material as door face sheets.

B. Manufacturers Basis of Design:

1. CECO Door Products Trio-E/Trio Series.
2. Curries Company 777 Trio-E/Trio Series.

2.04 ENERGY-EFFICIENT HOLLOW METAL FRAMES

A. Thermal Break Frames: Subject to the same compliance standards and requirements as standard hollow metal frames, provide where indicated thermally broken frame profiles available for use in both masonry and drywall construction. Fabricate from minimum 16 gauge galvannealed steel, with positive 3/8" vinyl thermal break and integral vinyl weatherstripping.

1. Manufacturers Basis of Design:
   a. CECO Door Products - Thermal Break SQT and SRT Series.

2.05 INTERIOR HOLLOW METAL FRAMES

A. Trimless door frame shall be 20 gage galvaneal steel. The installation shall be concealed jointing system with reinforced rolled edge perforated side strips that can be screwed onto wood or steel wall stud.

1. Manufacturer Basis of Design
   a. EZY Jamb

2.06 FRAME ANCHORS

A. Jamb Anchors:

1. Masonry Type: Adjustable strap-and-stirrup or T-shaped anchors to suit frame size, formed from A60 metallic coated material, not less than 0.042 inch thick, with corrugated or perforated straps not less than 2 inches wide by 10 inches long; or wire anchors not less than 0.177 inch thick.
2. Stud Wall Type: Designed to engage stud and not less than 0.042 inch thick.
3. Compression Type for Drywall Slip-on (Knock-Down) Frames: Adjustable compression anchors.
4. Windstorm Opening Anchors: Types as tested and required for indicated wall types to meet specified wind load design criteria.
5. FEMA 361 Storm Shelter Anchors: Masonry T-shaped, wire masonry type, or existing opening type anchors.

B. Floor Anchors: Floor anchors to be provided at each jamb, formed from A60 metallic coated material, not less than 0.042 inches thick.
C. Mortar Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.07 ACCESSORIES
A. Mullions and Transom Bars: Join to adjacent members by welding or rigid mechanical anchors.
B. Grout Guards: Formed from same material as frames, not less than 0.016 inches thick.

2.08 FABRICATION
A. Fabricate hollow metal work to be rigid and free of defects, warp, or buckle. Accurately form metal to required sizes and profiles, with minimum radius for thickness of metal. Where practical, fit and assemble units in manufacturer's plant. When shipping limitations so dictate, frames for large openings are to be fabricated in sections for splicing or splining in the field by others.
B. Tolerances: Fabricate hollow metal work to tolerances indicated in ANSI/SDI A250.8.
C. Hollow Metal Doors:
   1. Exterior Doors: Provide optional weep-hole openings in bottom of exterior doors to permit moisture to escape where specified.
   2. Astragals: Provide overlapping astragals as noted in door hardware sets in Division 08 Section "Door Hardware" on one leaf of pairs of doors where required by NFPA 80 for fire-performance rating or where indicated. Extend minimum 3/4 inch beyond edge of door on which astragal is mounted.
   3. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge strap for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".
D. Hollow Metal Frames:
   1. Shipping Limitations: Where frames are fabricated in sections due to shipping or handling limitations, provide alignment plates or angles at each joint, fabricated of same thickness metal as frames.
   2. Welded Frames: Weld flush face joints continuously; grind, fill, dress, and make smooth, flush, and invisible.
      a. Welded frames are to be provided with two steel spreaders temporarily attached to the bottom of both jambs to serve as a brace during shipping and handling. Spreader bars are for bracing only and are not to be used to size the frame opening.
   3. Knocked Down Frames: Provide frames with locking corner tabs which permit field assembly. Factory install compression type anchors and countersunk screw holes to secure the bottom of the jambs.
   4. Sidelight and Transom Bar Frames: Provide closed tubular members with no visible face seams or joints, fabricated from same material as door frame. Fasten members at crossings and to jambs by butt welding.
   5. High Frequency Hinge Reinforcement: Provide high frequency hinge reinforcements at door openings 48-inches and wider with mortise butt type hinges at top hinge locations.
6. Continuous Hinge Reinforcement: Provide welded continuous 12 gauge straps for continuous hinges specified in hardware sets in Division 08 Section "Door Hardware".

7. Provide countersunk, flat- or oval-head exposed screws and bolts for exposed fasteners unless otherwise indicated for removable stops, provide security screws at exterior locations.

8. Mortar Guards: Provide guard boxes at back of hardware mortises in frames at all hinges and strike preps regardless of grouting requirements.

9. Floor Anchors: Weld anchors to bottom of jambs and mullions with at least four spot welds per anchor.

10. Jamb Anchors: Provide number and spacing of anchors as follows:

   a. Masonry Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

      1) Two anchors per jamb up to 60 inches high.
      2) Three anchors per jamb from 60 to 90 inches high.
      3) Four anchors per jamb from 90 to 120 inches high.
      4) Four anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 120 inches high.

   b. Stud Wall Type: Locate anchors not more than 18 inches from top and bottom of frame. Space anchors not more than 32 inches o.c. and as follows:

      1) Three anchors per jamb up to 60 inches high.
      2) Four anchors per jamb from 60 to 90 inches high.
      3) Five anchors per jamb from 90 to 96 inches high.
      4) Five anchors per jamb plus 1 additional anchor per jamb for each 24 inches or fraction thereof above 96 inches high.
      5) Two anchors per head for frames above 42 inches wide and mounted in metal stud partitions.

11. Door Silencers: Except on weatherstripped or gasketed doors, drill stops to receive door silencers. Silencers to be supplied by frame manufacturer regardless if specified in Division 08 Section "Door Hardware".

E. Hardware Preparation: Factory prepare hollow metal work to receive template mortised hardware; include cutouts, reinforcement, mortising, drilling, and tapping according to the Door Hardware Schedule and templates furnished as specified in Division 08 Section "Door Hardware."

1. Locate hardware as indicated, or if not indicated, according to ANSI/SDI A250.8.

2. Reinforce doors and frames to receive non-template, mortised and surface mounted door hardware.

3. Comply with applicable requirements in ANSI/SDI A250.6 and ANSI/DHI A115 Series specifications for preparation of hollow metal work for hardware.

4. Coordinate locations of conduit and wiring boxes for electrical connections with Division 26 Sections.
2.09 STEEL FINISHES

A. Prime Finishes: Doors and frames to be cleaned, and chemically treated to insure maximum finish paint adhesion. Surfaces of the door and frame exposed to view to receive a factory applied coat of rust inhibiting shop primer.

1. Shop Primer: Manufacturer's standard, fast-curing, lead and chromate free primer complying with ANSI/SDI A250.10 acceptance criteria; recommended by primer manufacturer for substrate; and compatible with substrate and field-applied coatings.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas, and conditions, with Installer present, for compliance with requirements for installation tolerances and other conditions affecting performance of the Work.

B. General Contractor to verify the accuracy of dimensions given to the steel door and frame manufacturer for existing openings or existing frames (strike height, hinge spacing, hinge back set, etc.).

C. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Remove welded in shipping spreaders installed at factory. Restore exposed finish by grinding, filling, and dressing, as required to make repaired area smooth, flush, and invisible on exposed faces.

B. Prior to installation, adjust and securely brace welded hollow metal frames for squareness, alignment, twist, and plumbness.

C. Tolerances shall comply with SDI-117 "Manufacturing Tolerances Standard Steel Doors and Frames."

D. Drill and tap doors and frames to receive non-template, mortised, and surface-mounted door hardware.

3.03 INSTALLATION

A. General: Install hollow metal work plumb, rigid, properly aligned, and securely fastened in place; comply with Drawings and manufacturer's written instructions.

B. Hollow Metal Frames: Install hollow metal frames of size and profile indicated. Comply with ANSI/SDI A250.11 and NFPA 80 at fire rated openings.

1. Set frames accurately in position, plumbed, aligned, and braced securely until permanent anchors are set. After wall construction is complete and frames properly set and secured, remove temporary braces, leaving surfaces smooth and undamaged. Shim as necessary to comply with installation tolerances.
2. Floor Anchors: Provide floor anchors for each jamb and mullion that extends to floor, and secure with post-installed expansion anchors.

3. Masonry Walls: Coordinate installation of frames to allow for solidly filling space between frames and masonry with mortar.

4. Grout Requirements: Do not grout head of frames unless reinforcing has been installed in head of frame. Do not grout vertical or horizontal closed mullion members.

C. Hollow Metal Doors: Fit hollow metal doors accurately in frames, within clearances specified below. Shim as necessary.

1. Non-Fire-Rated Standard Steel Doors:
   a. Jambs and Head: 1/8 inch plus or minus 1/16 inch.
   b. Between Edges of Pairs of Doors: 1/8 inch plus or minus 1/16 inch.
   c. Between Bottom of Door and Top of Threshold: Maximum 3/8 inch.

2. Fire-Rated Doors: Install doors with clearances according to NFPA 80.

D. Field Glazing: Comply with installation requirements in Division 08 Section "Glazing" and with hollow metal manufacturer's written instructions.

3.04 ADJUSTING AND CLEANING

A. Final Adjustments: Check and readjust operating hardware items immediately before final inspection. Leave work in complete and proper operating condition. Remove and replace defective work, including hollow metal work that is warped, bowed, or otherwise unacceptable.

B. Remove grout and other bonding material from hollow metal work immediately after installation.

C. Prime-Coat and Painted Finish Touchup: Immediately after erection, sand smooth rusted or damaged areas of prime coat, or painted finishes, and apply touchup of compatible air drying, rust-inhibitive primer, zinc rich primer (exterior and galvanized openings) or finish paint.

END OF SECTION 08 11 13
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Solid core doors with wood veneer, hardboard or MDF faces.

B. Related Sections:
   1. Section 08 11 13 Section "Hollow Metal Doors and Frames".
   2. Section 08 71 00 Section "Door Hardware" for door hardware for flush wood doors and hollow metal frames.
   3. Section 08 06 71 “Door Hardware Schedule”.
   4. Division 09 “Painting”

C. Standards and References: Comply with the version year adopted by the Authority Having Jurisdiction.
   1. ANSI A208.1 – Wood Particleboard.

1.02 SUBMITTALS

A. Product Data: For each type of door indicated. Include details of core and edge construction, louvers, trim for openings, and WDMA I.S.1-A or AWS classifications. Include factory finishing specifications.

B. Door hardware supplier is to furnish templates, template reference number and/or physical hardware to the wood door supplier in order to prepare the doors and frames to receive the finish hardware items.

C. Shop Drawings: Indicate location, size, and hand of each door; elevation of each kind of door; construction details not covered in Product Data; location and extent of hardware blocking; and other pertinent data.
   1. Indicate dimensions and locations of mortises and holes for hardware.
   2. Indicate dimensions and locations of cutouts.
   3. Indicate finish requirements.
   4. Corner sections of doors, 8 by 10 inches, with door faces and edges representing actual materials to be used.
      a. Provide samples for each species of veneer and solid lumber required.

D. Informational Submittals:
1. Submit manufacturer's environmental documentation and applicable sustainability program credits that are available to contribute towards a LEED rated project certification.

E. Warranty: Sample of special warranties.

1.03 QUALITY ASSURANCE

A. Source Limitations: Obtain flush wood doors through one source from a single manufacturer wherever possible.

C. Pre-Submittal Conference: Conduct conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier, Installer, and Contractor to review proper methods and procedures for receiving, handling, and installing flush wood doors.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Comply with requirements of referenced standard and manufacturer's written instructions.

B. Package pre-finished doors individually in plastic bags or cardboard cartons and wrap bundles of doors in plastic sheeting.

C. Mark each door on top rail with opening number used on Shop Drawings.

1.05 PROJECT CONDITIONS

A. Environmental Limitations: Do not deliver or install doors until spaces are enclosed and weather tight, wet work in spaces is complete and dry, and HVAC system is operating and maintaining ambient temperature and humidity conditions at occupancy levels during the remainder of the construction period.

1.06 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace doors that fail in materials or workmanship within specified warranty period.

1. Failures include, but are not limited to, the following:
   a. Warping (bow, cup, or twist) more than 1/4 inch in a 42-by-84-inch section.
   b. Telegraphing of core construction in wood face veneers exceeding 0.01 inch in a 3-inch span.
   c. Telegraphing of core construction and delaminating of face in decorative laminate-faced doors.

2. Warranty includes installation and finishing that may be required due to repair or replacement of defective doors.

3. Warranty Period for Solid Core Interior Doors: Life of installation according to manufacturer's written warranty.
PART 2 - PRODUCTS

2.01 DOOR CONSTRUCTION – GENERAL

A. WDMA I.S.1-A Performance Grade: Extra Heavy Duty; Aesthetic Grade: Premium.

B. Environmentally Responsible Doors: Provide where specified doors manufactured with the following environmentally responsible components:

1. Agrifiber Core:
   a. Rapidly Renewable Materials: Interior wood flush doors to include materials made from agricultural products that are typically harvested within a 10-year or shorter cycle.
   b. Recycled Content: Interior wood flush doors to contain a minimum of 20% recycled content.
   c. Regional Materials: Door and agrifiber core manufacturer products or materials have been manufactured and/or extracted, harvested, or recovered within 500 miles of the project site.
   d. Low Emitting Materials: Interior wood flush doors must contain no added urea-formaldehyde resins.

2. Veneer Face: Forest Stewardship Council (FSC) certified, as available.

2.02 CORE CONSTRUCTION

A. Particleboard Core Doors:

3. Blocking: When through-bolted hardware is not used, provide wood blocking in particleboard core doors as follows:

4. Basis of Design:
   a. Graham: PC, PC5

2.03 DOORS FOR OPAQUE FINISH

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:

1. Eggers Industries.
2. Graham.
3. Marshfield.
4. VT Industries.

B. Interior Solid Core Doors:

1. Grade: Custom.
2. Faces: Sound closed grain hardwood of mill option, Hardboard or MDF. Face veneer minimum 1/50-inch (0.5mm) thickness at moisture content of 12% or less.
   a. Hardboard Faces: AHA A135.4, Class 1 (tempered) or Class 2 (standard).
   b. MDF Faces: ANSI A208.2, Grade 150 minimum.
3. Vertical Edges: Any closed grain hardwood. Wood or composite material, one piece, laminated, or veneered. Minimum requirements per WDMA section P-1, Performance Standards for Architectural Wood Flush Doors.
4. Horizontal Edges: Solid wood or structural composite material meeting the minimum requirements per WDMA section P-1, Performance Standards for Architectural Wood Flush Doors
5. Construction: Five plies. Stiles and rails are bonded to core, then entire unit sanded before applying face veneers.

2.04 FABRICATION

A. Factory fit doors to suit frame opening sizes indicated. Comply with clearance requirements of referenced quality standard for fitting unless otherwise indicated.
   1. Comply with requirements in NFPA 80 for fire rated doors.

B. Factory machine doors for hardware that is not surface applied. Comply with final hardware schedules, door frame Shop Drawings, DHI A115-W series standards, and hardware templates.
   1. Coordinate with hardware mortises in metal frames to verify dimensions and alignment before factory machining.
   2. Metal Astragals: Factory machine astragals and formed steel edges for hardware for pairs of fire rated doors.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine doors and installed door frames before hanging doors.
   1. Verify that frames comply with indicated requirements for type, size, location, and swing characteristics and have been installed with level heads and plumb jambs.
   2. Reject doors with defects.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 INSTALLATION

A. Hardware: For installation, see Division 8 Section "Door Hardware."

B. Installation Instructions: Install doors to comply with manufacturer's written instructions and the referenced quality standard, and as indicated.
   1. Install fire rated doors in corresponding fire rated frames according to NFPA 80.

C. Factory Fitted Doors: Align in frames for uniform clearance at each edge.

D. Factory Finished Doors: Restore finish before installation if fitting or machining is required at Project site.

3.03 ADJUSTING

A. Operation: Re-hang or replace doors that do not swing or operate freely.
B. Finished Doors: Replace doors that do not comply with requirements. Doors may be repaired or refinished if work complies with requirements and shows no evidence of repair or refinishing.
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Out-swing entry doors.

1.02 PERFORMANCE REQUIREMENTS

A. Doors shall have a certified rating in accordance with WDMA CS2 Hallmark Program Guide for Side-hinged Exterior Door Systems.

B. Door Unit Air Leakage, ASTM E 283, 1.57 psf (25 mph): 0.30 cfm per square foot of frame or less.

C. Door Unit Water Penetration: No water penetration through door unit when tested in accordance with ASTM E 331 with water applied at rate of 5 gallons per hour per square foot. Doors with standard sill shall have water resistance performance level up to 7.5 psf and low profile sill (ADA) shall have water resistance performance level of 0 psf.

1.03 SUBMITTALS

A. Product Data: Submit manufacturer's product data, including installation instructions.

B. Shop Drawings: Submit manufacturer's shop drawings, indicating dimensions, construction, component connections and locations, anchorage methods and locations, hardware locations, and installation details.

C. Samples: Submit full-size or partial full-size sample of door illustrating glazing system, quality of construction, and color of finish.

D. Warranty: Submit manufacturer’s standard warranty.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to site undamaged in manufacturer’s or sales branch's original, unopened containers and packaging, with labels clearly identifying manufacturer and product name. Include installation instructions.

B. Storage: Store materials in an upright position, off ground, under cover, and protected from weather, direct sunlight, and construction activities.

C. Handling: Protect materials and finish during handling and installation to prevent damage.
PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Pella Corporation, 102 Main Street, Pella, Iowa 50219. Toll Free (800) 54-PELLA. Phone (641) 621-1000. Website www.pella.com.

2.02 OUT-SWING ENTRY DOORS

A. Out-Swing Entry Doors: Factory-assembled doors with outward-swing door panels installed in frames.

B. Frames:
   1. Select softwood, water-repellent, preservative-treated with EnduraGuard® in accordance with WDMA I.S.-4. EnduraGuard includes water-repellency, three active fungicides and an insecticide applied to the head and jambs.
   2. Interior Exposed Surfaces: Aluminum Clad Wood.
   3. Exterior Surfaces: Aluminum Clad Wood
      a. Aluminum Sills with the following finishes: Nickel Anodized, Bronze Anodized, Brass Anodized, Mill Finish
      b. Standard sill and ADA Approved sills are available.
   5. Frame Dimensions:
      a. Overall Frame Depth: 5-15/16 inches (150 mm).
      b. Nail-fin or Brickmould Frame Depth: 4-9/16 inches (116 mm).
      c. Other Frame Conditions available by Jamb Extending on 1/8” increments up to 9-3/16” inches (233 mm).

C. Door Panels:
   1. Fiberglass Door Panels:
      a. 0.072-inch minimum fiberglass skin on exterior and interior surfaces with CFC-free injected foam insulating core.
      b. Rails and Stiles: Wood top rails and stiles and wood plastic composite bottom rails secured with structural adhesive between skins at perimeter.
      c. Fiberglass Grain: [Mahogany] [Oak] [Smooth].
      d. Lock Block: 12-inches or greater, solid wood.
      e. Panel Thickness: 1-11/16 inches (43 mm).
      f. 20-minute fire panels are Warnock-Hersey labeled.
   2. Hardware Preparation
      a. Factory prepared Multi-point with lock installed
      b. 2-3/8-inch backset
      c. 6 inches on center
   3. Door Closer and Panic Hardware Reinforcement: Solid reinforcement positioned to support surface-mounted closer and panic hardware.

D. Weather Strip:
   1. Head: Dual-seal weatherstrip shall contact interior face and side of door panel and extruded leaf rain screen shall cover the exterior face of door panel.
   2. Jambs: Dual-seal weatherstrip shall contact interior face and side of door panel.
   3. Sill: Bristle rain screen at exterior face of door panel with bulb weatherstrip on threshold shall contact interior face of door panel.
2.03 GLAZING

A. Glazing:
   1. Float Glass: ASTM C 1036, Quality 1.
      b. ASTM E1300 compliant.
   2. Type:
      a. Tempered Insulating Glass: Clear

2.04 HARDWARE

A. Hinges: Three (3) per door panel on 6' 8" and 7' 0" panel heights; four (4) per door panel on 8' 0" heights for operable units.
   1. Type:
      a. 4-inch by 4-inch by 0.100-inch thick cold-rolled steel with non-removal pin.
      b. 4-inch by 4-inch by 0.130-inch thick aluminum with non-removal pin.
      c. 4-inch by 4-inch by 0.100-inch thick cold-rolled steel with Ball bearings and non-removal pin.
      d. 4-inch by 4-inch by 0.100-inch thick cold-rolled steel with spring and non-removal pin.
   2. Finish: US26, polished chrome-plated

B. Frames are prepared for hardware to match door panel boring

C. Locking Hardware:
   1. Multi-point lock mechanism includes stainless steel face plate.
   2. Multi-point lock handle set hardware, with Schlage 5-pin configured keyway, is Satin Nickel.

2.05 TOLERANCES

A. Doors shall accommodate the following opening tolerances:
   1. Vertical Dimensions Between High and Low Points: Plus 1/4 inch, minus 0 inch.
   2. Width Dimensions: Plus 1/4 inch, minus 0 inch.
   3. Building Columns or Masonry Openings: Plus or minus 1/4 inch from plumb.

2.06 FINISH

   1. Exterior aluminum door frame surfaces shall be finished with the following multi-stage system:
      a. Clean and etch aluminum surface of oxides.
      b. Pre-treat with chrome phosphate conversion coating.
      c. Pre-treat with chromic acid sealer/rinse.
      d. Prime with baked-on modified polyester primer.
      e. Top coat with baked-on polyester enamel.
   2. Color: Black.

B. Exterior Finish System Performance Requirements:
   1. Exterior aluminum finishes shall meet or exceed the following performance requirements:
      a. Copper-Accelerated Acetic Acid Salt Spray (Fog) Testing (CASS Test), ASTM B 368.
b. Ozone Deterioration, ASTM D 1149, Modified: 5 ppm ozone, 160 degrees F, 60 percent relative humidity, 100 hours exposure, little or no loss of cure.

d. Taber Abrasion Resistance, ASTM D 4060: 500 g weight, CS-10 wheel, 500 cycles, less than 25 g weight loss.

C. Door Panel Exterior Finish:
   1. Fiberglass Door Panels: Factory pre-finished, paint; color Black.

D. Door Frame Interior Finish: Factory pre-finished, paint; White.

E. Door Panel Interior Finish:
   1. Fiberglass Door Panels: Factory pre-finished paint; color: Black.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas to receive doors. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not proceed with installation until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Install doors in accordance with manufacturer's instructions and approved shop drawings.

B. Install doors to be weather-tight and freely operating.

C. Maintain alignment with adjacent work.

D. Secure assembly to framed openings, plumb and square, without distortion.

E. Integrate door system installation with exterior weather-resistant barrier using flashing/sealant tape. Apply and integrate flashing/sealant tape with weather-resistant barrier using watershed principles in accordance with door manufacturer's instructions.

F. Place interior seal around door perimeter to maintain continuity of building thermal and air barrier using insulating-foam sealant.

G. Seal door to exterior wall cladding with sealant and related backing materials at perimeter of assembly.

H. Leave doors closed.

3.03 CLEANING

A. Clean door frames and glass in accordance with Division 1 requirements.

B. Do not use harsh cleaning materials or methods that would damage finish.

C. Remove manufacturer’s proprietary labels and visible markings.
PART 1 - GENERAL

1.01 SECTION INCLUDES
   A. Aluminum-clad wood French hinged doors.

1.02 RELATED SECTIONS
   A. Section 07 27 00 - Air Barriers: Water-resistant barrier.
   B. Section 07 92 00 - Joint Sealants: Sealants and caulking.
   C. Section 08 71 00 - Door Hardware.

1.03 PERFORMANCE REQUIREMENTS
   A. Doors shall be Hallmark certified to a rating in accordance with ANSI/AAMA/NWWDA 101/L.S.2/A440-08.
   B. Door Unit Air Leakage, ASTM E 283, 1.57 psf (25 mph): 0.15 cfm per square foot of frame or less.
   C. Door Unit Water Penetration: No water penetration through door unit when tested in accordance with ASTM E 547, under static pressure of [3.75 psf (40 mph)] [4.5 psf (42 mph)] [6.0 psf (48 mph)] [8.36 psf (57 mph)] [10.66 psf (64 mph)] [0 psf (0 mph)] after 4 cycles of 5 minutes each, with water being applied at a rate of 5 gallons per hour per square foot.

1.04 SUBMITTALS
   A. Comply with Division 1 requirements.
   B. Product Data: Submit manufacturer's product data, including installation instructions.
   C. Warranty: Submit manufacturer’s standard warranty.

1.05 DELIVERY, STORAGE, AND HANDLING
   A. Delivery: Deliver materials to site undamaged in manufacturer's or sales branch's original, unopened containers and packaging, with labels clearly identifying manufacturer and product name. Include installation instructions.
   B. Storage: Store materials in an upright position, off ground, under cover, and protected from weather, direct sunlight, and construction activities.
   C. Handling: Protect materials and finish during handling and installation to prevent damage.
PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Pella Corporation, 102 Main Street, Pella, Iowa 50219. Toll Free (800) 54-PELLA. Phone (641) 621-1000. Website www.pella.com.

2.02 ALUMINUM-CLAD WOOD DOORS

A. Aluminum-Clad Wood In-swing French Doors: Architect Series factory-assembled aluminum-clad wood French doors with inward swing door panels installed in frame.

B. Frame:
1. Select woods, water-repellent, preservative-treated with EnduraGuard® in accordance with WDMA I.S.-4. EnduraGuard includes water-repellency, three active fungicides and an insecticide applied to the frame.
2. Interior Exposed Surfaces: Clear pine, veneered and edge-banded.
3. Exterior Surfaces: Clad with aluminum at head and jambs.
4. Sill: 1/2-inch low-profile extruded aluminum with bronze anodized finish.
5. Overall Frame Depth: 5-7/8 inches (149 mm) to 8-5/16 inches (211 mm).

C. Frame:
1. Select softwood, water-repellent, preservative-treated with EnduraGuard in accordance with WDMA I.S.-4. EnduraGuard includes water-repellency, three active fungicides and an insecticide applied to the frame.
2. Interior Exposed Surfaces: Clear pine, veneered and edge-banded with no visible fastener holes.
4. Overall Frame Depth: 5-7/8 inches (149 mm).

D. Door Panel:
1. Select woods, water-repellent, preservative-treated with EnduraGuard™ in accordance with WDMA I.S.-4. EnduraGuard includes water-repellency, three active fungicides and an insecticide applied to the panel.
5. Corners: Urethane-sealed and secured with metal fasteners and structural adhesive.
6. Panel Thickness: 2-1/16 inches (52 mm).

E. Weather Strip: Dual-durometer extruded polymer along perimeter of door frames and along the bottom of door panels.

2.03 GLAZING

A. Glazing:
1. Float Glass: ASTM C 1036, Quality 1.
2. Type: Urethane-glazed 13/16-inch, dual-seal, fully tempered, insulating glass, clear.
2.04 HARDWARE

A. Handles:
1. Solid brass on interior and exterior.
2. Interior thumb-turn.
3. Schlage configured “C-K” keyway pinlock cylinder on exterior.
4. Finish: Endura Hardware Collection satin nickel

B. Locking System:
1. Mortised and keyed multi-point locking system.
2. 1-inch center dead bolt and shoot-bolts at head and sill shall engage simultaneously.

C. Hinges:
1. Corrosion-resistant leaves with wear-resistant hinge bushings and stainless steel pin and decorative cap.
2. Doors with Frame Heights 6’ 10” and Under: 3 hinges.
3. Doors with Frame Heights Greater than 6’ 10”: 4 hinges.

2.05 TOLERANCES

A. Doors shall accommodate the following opening tolerances:
1. Vertical Dimensions Between High and Low Points: Plus 1/8 inch, minus 0 inch.
2. Width Dimensions: Plus 1/8 inch, minus 0 inch.
3. Building Columns or Masonry Openings: Plus or minus 1/8 inch from plumb.

2.06 FINISH

1. Exterior aluminum surfaces shall be finished with the following multi-stage system:
   a. Clean and etch aluminum surface of oxides.
   b. Pre-treat with chrome phosphate conversion coating.
   c. Pre-treat with chromic acid sealer/rinse.
   d. Top coat with baked-on polyester enamel.
2. Color: Black.
3. Performance Requirements: Exterior aluminum finishes shall meet or exceed the following performance requirements of AAMA 2605:
   a. Dry Film Hardness: Eagle Turquoise Pencil, F minimum.
   b. Film Adhesion: 1/16-inch crosshatch, dry, wet, boiling water.
   d. Abrasion Resistance: Falling sand coefficient value of 20 minimum.
   e. Chemical Resistance: 10 percent Muriatic acid, 15 minutes. Mortar pat test, 24 hours.
   f. Detergent Resistance: 3 percent at 100 degrees F, 72 hours.
   g. Corrosion Resistance: Humidity, 3,000 hours. Salt spray exceeds 3,000 hours.

B. Interior Finish: Factory finished with 1 prime coat and 1 top coat of White.

2.07 INSTALLATION ACCESSORIES

A. Flashing/Sealant Tape: Pella SmartFlash.
1. Aluminum-foil-backed butyl window and door flashing tape.
2. Maximum Total Thickness: 0.013 inch.
3. UV resistant.
4. Verify sealant compatibility with sealant manufacturer.

B. Interior Insulating-Foam Sealant: Low-expansion, low-pressure polyurethane insulating window and door foam sealant.

C. Exterior Perimeter Sealant: “Pella Window and Door Installation Sealant” or equivalent high quality, multi-purpose sealant as specified in the joints sealant section.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas to receive doors. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not proceed with installation until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Install doors in accordance with manufacturer's instructions and approved shop drawings.

B. Install doors to be weather-tight and freely operating.

C. Maintain alignment with adjacent work.

D. Secure assembly to framed openings, plumb and square, without distortion.

E. Integrate door system installation with exterior water-resistant barrier using flashing/sealant tape. Apply and integrate flashing/sealant tape with water-resistant barrier using watershed principles in accordance with door manufacturer's instructions.

F. Place interior seal around door perimeter to maintain continuity of building thermal and air barrier using insulating-foam sealant.

G. Seal door to exterior wall cladding with sealant and related backing materials at perimeter of assembly.

H. Leave doors closed and locked with shoot bolts extended.

3.03 CLEANING

A. Clean door frames and glass in accordance with Division 1 requirements.

B. Do not use harsh cleaning materials or methods that would damage finish.

C. Remove labels and visible markings.

END OF SECTION 08 14 33
PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawing and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes wall and ceiling access doors and frames.

B. Related Sections include Division 23 for heating and air-conditioning duct access doors.

1.03 LEED BUILDING GENERAL REQUIREMENTS:

A. Implement practices and procedures to meet the project’s environmental goals, which include achieving a LEED™ 2009 New Construction Silver rating. Specific project goals which may impact this and the other sections of this specification include: use of recycled-content materials; use of locally-manufactured materials; use of low-emitting materials; use of certified wood products; construction waste recycling; and the implementation of a construction indoor air quality management plan. Ensure that the requirements related to these goals, as defined in this Section and other Sections of the contract documents, are implemented to the fullest extent. Substitutions or other changes to the work shall not be allowed if such changes substantially compromise the stated LEED Building criteria.

1.04 SUBMITTALS

A. Product Data: For each type of door and frame indicated. Include construction details relative to materials, individual components and profiles, finishes, and fire ratings (if required) for access doors and frames.

B. Schedule: Provide complete door and frame schedule, including types, general locations, sizes, construction details, latching or locking provisions, and other data pertinent to installation.

C. LEED Building Submittal Requirements: The contractor or subcontractor shall submit the following LEED Building certification items:

1. A completed LEED Building Materials Certification Form, per Section 013300 – Submittal Requirements under the LEED BUILDING Submittal Requirements article of these specifications. Information to be supplied includes:
   a. The percentage by weight of recycled content in the product(s). Identify post-consumer and/or pre-consumer recycled content.
   b. The manufacturing location for the product(s); and the location (source) of the raw materials used to manufacture the product(s).
c. Provide material costs for the materials included in the contractor’s or subcontractor’s work. Material cost does not include costs associated with labor and equipment.

2. Letters of Certification, provided from the product manufacturer on the manufacturer’s letterhead, to verify the amount of recycled content.

3. Product Cut Sheets for all materials that meet the LEED Building Performance Requirements this Section.

4. Material Safety Data Sheets (MSDS), for all applicable products. Applicable products include, but are not limited to adhesives, sealants, carpets, paints and coatings applied on the interior of the building. MSDS shall indicate the Volatile Organic Compound (VOC) limits of products submitted (If an MSDS does not include a product’s VOC content, then product data sheets, manufacturer literature, or a letter of certification from the manufacturer can be submitted in addition to the MSDS to indicate the VOC content).

1.05 QUALITY ASSURANCE

A. Source Limitations: Obtain doors and frames through one source from a single manufacturer.

B. Size Variations: Obtain Architect's acceptance of manufacturer's standard-size units, which may vary slightly from sizes indicated.

C. LEED Building Performance Requirements

1. Adhesives or sealants used for work in this section for interior applications shall meet the requirements of Division 1, Section 018115: “Volatile Organic Compound (VOC) Limits for Adhesives, Sealants, Paints and Coatings”, where applicable.

2. Materials manufactured within a radius of 500 miles from the project site where all or a portion of the raw resources also originate within a radius of 500 miles shall be documented in accordance with the LEED Building Submittal Requirements of this Section.

3. Steel materials used for work in this section shall contain a minimum of 35% (combined) pre-consumer/post-consumer recycled content (the percentage of recycled content is based on the weight of the component materials). Certification of recycled content shall be in accordance with the LEED Building Submittal Requirements of this Section.

4. Materials that contain recycled content shall be documented in accordance with the LEED Building Submittal Requirements of this Section.

1.06 COORDINATION

A. Verification: Determine specific locations and sizes for access doors needed to gain access to concealed equipment, and indicate on schedule specified in "Submittals" Article.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Access Doors Manufacturers: Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:

1. Access Panel Solutions, Inc. (APS).
2. Acudor Products, Inc.
4. Cendrex, Inc.
5. Cesco Products.
6. Elmdor/Stoneman; Div. of Acorn Engineering Co.
7. Jensen Industries.
8. J. L. Industries, Inc.
11. MIFAB Manufacturing, Inc.
13. Nystrom Building Products Co.
14. Precision Plumbing Products, Inc.
15. Williams Bros. Corporation of America (The).

B. **Fire Rated Access Doors and Frames:** Provide fire rated access doors and frames for installation into fire rated walls and ceilings as indicated on Drawings.

2.02 MATERIALS

A. **Hot-Rolled Steel Sheets:** ASTM A 569/A 569M, Commercial Steel (CS), Type B; free of scale, pitting, and surface defects; pickled and oiled; with minimum thickness indicated representing specified nominal thickness according to ASTM A 568/A 568M.

B. **Cold-Rolled Steel Sheets:** ASTM A 366/A 366M, Commercial Steel (CS), or ASTM A 620/A 620M, Drawing Steel (DS), Type B; stretcher-leveled standard of flatness; with minimum thickness indicated representing specified nominal thickness according to ASTM A 568/A 568M. Electrolytic zinc-coated steel sheet, complying with ASTM A 591/A 591M, Class C coating, may be substituted at fabricator's option.

C. **Stainless-Steel Sheet, Strip, Plate, and Flat Bars:** ASTM A 666, Type 304; with minimum sheet thickness indicated representing specified thickness according to ASTM A 480/A 480M.

D. **Drywall Beads:** Edge trim formed from 0.0299-inch (0.76-mm) zinc-coated steel sheet formed to receive joint compound and in size to suit thickness of gypsum board and gypsum base for veneer plaster.

2.03 PAINT

A. **Shop Primer for Ferrous Metal:** Fast-curing, lead- and chromate-free, universal modified-alkyd primer complying with performance requirements in FS TT-P-664; selected for good resistance to normal atmospheric corrosion, compatibility with finish paint systems indicated, and capability to provide a sound foundation for field-applied topcoats despite prolonged exposure.

2.04 ACCESS DOORS AND FRAMES

A. **Flush Access Doors and Frames with Exposed Trim:** Fabricated from stainless-steel sheet.
   1. Locations: Ceramic-tile wall surfaces.
   2. Door: Minimum 0.060-inch (1.5-mm-) thick sheet metal, set flush with exposed face flange of frame.
   3. Frame: Minimum 0.060-inch (1.5-mm-) thick sheet metal with 1-inch (25-mm-) wide, surface-mounted trim.
   5. Lock: Key-operated cylinder lock.
   1. Locations: Gypsum board and veneer-plaster wall and ceiling surfaces.
   2. Door: Minimum 0.060-inch (1.5-mm-) thick sheet metal, set flush with surrounding finish surfaces.
   3. Frame: Minimum 0.060-inch (1.5-mm-) thick sheet metal with drywall bead.
   5. Lock: Key-operated cylinder lock.

   1. Locations: Gypsum board wall and ceiling surfaces where acoustics, air pressure difference, or infection control measures are required.
   2. Door: Minimum 0.060-inch (1.5-mm-) thick sheet metal, set flush with surrounding finish surfaces.
   3. Frame: Minimum 0.060-inch (1.5-mm-) thick sheet metal with drywall bead.
   5. Gasket: Neoprene or other non-hardening material to provide full air-tight enclosure.
   6. Lock: Key-operated cylinder lock.

2.05 FABRICATION

A. General: Provide access door assemblies manufactured as integral units ready for installation.

B. Metal Surfaces: For metal surfaces exposed to view in the completed Work, provide materials with smooth, flat surfaces without blemishes. Do not use materials with exposed pitting, seam marks, roller marks, rolled trade names, or roughness.

C. Steel Doors and Frames: Grind exposed welds smooth and flush with adjacent surfaces. Furnish attachment devices and fasteners of type required to secure access panels to types of supports indicated.
   1. Exposed Flanges: Nominal 1 to 1-1/2 inches (25 to 38 mm) wide around perimeter of frame.
   2. For trimless frames with drywall bead for installation in gypsum board assembly and resin veneer plaster, provide edge trim for gypsum board and gypsum base securely attached to perimeter of frames.
   3. Provide mounting holes in frames to attach frames to metal or wood framing in plaster and drywall construction.

D. Latching Mechanisms: Furnish number required to hold doors in flush, smooth plane when closed.
   1. For cylinder lock, furnish two keys per lock and key all locks alike.

2.06 FINISHES, GENERAL

A. Comply with NAAMM's "Metal Finishes Manual for Architectural and Metal Products" for recommendations for applying and designating finishes.

B. Finish metal fabrications after assembly.

2.07 STEEL FINISHES

A. Surface Preparation: Prepare uncoated ferrous-metal surfaces to comply with minimum requirements indicated below for SSPC surface-preparation specifications and environmental exposure conditions of installed metal fabrications:
   1. Interiors (SSPC Zone 1A): SSPC-SP 3, "Power Tool Cleaning."
B. Apply shop primer to uncoated surfaces of metal fabrications. Comply with SSPC-PA 1, "Paint Application Specification No. 1," for shop painting.

2.08 STAINLESS-STEEL FINISHES

A. Remove tool and die marks and stretch lines or blend into finish.

B. Grind and polish surfaces to produce uniform, directionally textured, polished finish indicated, free of cross scratches. Run grain with long dimension of each piece.

C. Bright, Directional Polish: No. 4 finish. When polishing is completed, passivate and rinse surfaces. Remove embedded foreign matter and leave surfaces chemically clean.

PART 3 - EXECUTION

3.01 PREPARATION

A. Advise installers of other work about specific requirements relating to access door and floor door installation, including sizes of openings to receive access door and frame, as well as locations of supports, inserts, and anchoring devices.

3.02 INSTALLATION

A. Comply with manufacturer's written instructions for installing access doors and frames.

B. Install access doors with trimless frames flush with adjacent finish surfaces or recessed to receive finish material.

3.03 ADJUSTING AND CLEANING

A. Adjust doors and hardware after installation for proper operation.

B. Remove and replace doors and frames that are warped, bowed, or otherwise damaged.

END OF SECTION 08 31 13
SECTION 08 43 33

ALUMINUM-CLAD WOOD FRAMED FOLDING WALL SYSTEM

PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes engineered sliding and folding wood and glass exterior wall system.
   1. Provide engineering design of wall system.

1.03 REFERENCES

A. American Architectural Manufacturers Association (AAMA):
   1. AAMA 611.98, Voluntary Specification for Anodized Architectural Aluminum.
   2. AAMA 2603.02, Voluntary Specifications, Performance Requirements and Test Procedures for Pigmented Organic Coatings on Aluminum Extrusions and Panels.
   3. AAMA 1303.5, Voluntary Specifications for Forced Entry Resistant Aluminum Sliding Glass Doors.

B. American National Standards Institute (ANSI):

C. American Society for Testing and Materials (ASTM):
   1. ASTM E 283, Test Method for Rate of Air Leakage through Exterior Windows, Curtain Walls, and Doors by Uniform Static Air Pressure Difference.

D. Consumer Product Safety Commission (CPSC):

E. National Fenestration Rating Council (NFRC):
   1. NFRC 100, Procedure for Determining Fenestration Product Thermal Materials.

1.04 SUBMITTALS

A. Detail Drawings: Indicate dimensioning, direction of swing, configuration, swing panels, typical head jamb, side jambs and sill details, type of glazing material and handle height.
B. Product Data: Manufacturer's literature including independently tested data listing performance criteria and Owner's Manual with installation instructions.

C. Contract Closeout Submittal: Submit Owner’s Manual from manufacturer. Identify with project name, location and completion date, type and size of unit installed.

1.05 QUALITY ASSURANCE

A. Manufacturer: Provide complete, precision built, engineered, pre-fitted unit by a single source manufacturer with at least 15 years experience in providing folding/sliding door systems for large openings in the North American market.

B. Performance Requirements: Unit to comply with applicable manufacturer’s independently certified testing results. Testing results include air infiltration in accordance with ASTM E 283, water penetration in accordance with ASTM E 547, structural loading in accordance with ASTM E 330, and forced entry in accordance with AAMA 1303.5 and CAWM 300-96.

C. Thermal Performance: Unit to comply with the U value, rated, certified and labeled or simulated in accordance with NFRC 100, shown in manufacturer’s latest published data for the glazing, sill and direction of opening specified.

D. Solar Heat Gain Coefficient: Unit to comply with the solar heat gain coefficient, simulated in accordance with NFRC 200, shown in manufacturer’s latest published data for the glazing and sill specified.

E. Installer Qualifications: Installer experienced in the installation of manufacturer’s products or other similar products for large openings. Installer to provide reference list of at least 3 projects of similar scale and complexity successfully completed in the last 3 years. Provide project names, locations, completion dates, names and telephone numbers of General Contractor and Owner’s contact person.

1.06 WARRANTY

A. Provide manufacturer’s standard warranty against defects in materials and workmanship.

B. Warranty Period: Ten years for rollers and for seal failure of insulated glass supplied. For all other components, one year (two years if unit is installed by manufacturer’s certified trained installer) from date of delivery by manufacturer.

1.07 SITE CONDITIONS, DELIVERY, STORAGE AND HANDLING

A. In addition to general delivery, storage and handling requirements specified in Division 01, comply with the following:
   1. Deliver materials to job site in sealed, unopened cartons or crates. Protect units from damage. Store material under cover, protected from weather and construction activities.

B. Condition wood components to average prevailing relative humidity before installation.

C. Do not subject wood components to extreme nor rapid changes in heat or humidity.

D. Do not use forced heat to dry out building.

E. Store flat in dry, well ventilated area out of direct sunlight.
PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Subject to compliance with requirements, manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
   1. Dynamic Architectural Windows & Doors, Inc.
   2. Modernfold, Inc.

2.02 WALL SYSTEM

A. Nana Wall Systems, Inc., NanaWall WA67 aluminum-clad wood wall system including aluminum clad wood frame; threshold; aluminum clad wood panels; sliding, folding, and locking hardware; splines; weather stripping; glass and glazing; designed to provide an opening glass wall with sizes and configurations as shown on drawings and as specified.

B. Frame and Panels: From manufacturer’s standard profiles, provide head jamb, side jambs, and panels with dimensions shown on drawings.
   1. Provide panels with standard one lite.
   2. Provide standard bottom rail.
   3. Type of Wood: Solid, three layer, cross-grained, kiln-dried Douglas fir with matching solid wood glazing stops.
   4. Construction of wood panels to include close tolerance mortise and tenon, glued and pinned corners.
   5. Wood Finish: Clear sand sealed and additional one coat of factory applied clear finish [OR choose from pre-selected two coats of factory applied finishes available from manufacturer]. Finishes to be water based, opened pored.
   6. Aluminum Extrusion: Extrusions with nominal thickness of .098” (2.5 mm). Alloy specified as AIMgSi0.5 with strength rated as 6063-T5 or F-22 (European standard). Anodized conforming to AAMA 611.98 or powder coated conforming to AAMA 2603.02.
   7. Aluminum Finish: Dark bronze anodized E6 C34.

C. Glass: Provide manufacturer’s standard glass and dry glazing with EPDM gaskets and glass stops fixed with hidden nails, 1” (26 mm) insulating clear tempered 1-inch (26 mm) insulating argon filled Low-E tempered [custom glass specified in Division 08 Section, “Glazing” complying with safety glazing requirements of ANSI Z97.1 and CPSC 16CFR 1201.
   1. Provide manufacturer’s standard dark bronze anodized, E6 C34 glass spacers.

D. Locking Hardware and Handles: Provide manufacturer’s standard flat handle and concealed two point locking hardware operated by 180 degree turn of handle between each pair of folding panels and on any secondary swing panel. Face applied flush bolt locking will not be allowed.
   1. For locking operation from inside only, on main entry swing panel or pair of bi-fold panels, provide manufacturer’s standard flat handle and concealed two point locking hardware operated by 180 degree turn of handle.
   2. On the main entry panel for models with a swing panel, provide manufacturer’s standard solid brass lever handles in brush chrome finish on the inside and outside, a Schlage compatible lock set with lockable latch, dead bolt and rods at the top and bottom. Rods to be concealed and not edge mounted. Depression of
handles withdraws latch. Lifting of handles engages rods and turn of key or thumb turn engages deadbolt and operates lock.

3. On the main entry panel for models with a swing panel, provide HEWI 550.33 ADA nylon pull handles with separate lock set and dead bolt. Nylon handle color: closest match to flat handle color from available colors.

4. Aluminum locking rods with standard fiber glass reinforced polyamide end caps at top and bottom. Rods to have a stroke of 15/16” (24 mm).

5. Provide handle height centered as shown on Drawings from bottom of panel.

E. Sliding/Folding Hardware: Provide manufacturer’s standard combination sliding and folding hardware with top, bottom tracks and threshold. All running carriages to be with sealed, self-lubrication, ball bearing multi-rollers. Surface mounted hinges and running carriages will not be allowed. Weight of panels to be borne by the bottom of the track will not be allowed.

1. For each pair of folding panels, for top hung system WA67/o, provide cardanic, independently suspended, four wheeled coated with fiber glass reinforced polyamide upper running carriage and lower guide carriage. Provide sill thermally broken with ¾” polyamide.

2. At floor mounted system WA67/u, provide upper guide carriage and lower running carriage with four vertical stainless steel wheels and two horizontal wheels. The vertical wheels to ride on Type 304 stainless steel guide track covers over the full length of sill track and lie above the water run-off level. Carrying capacity of lower running carriage to be 440 lbs.

3. Provide manufacturer’s standard aluminum hinges and spline on edge of panel. For structural strength, hinges to be connected to spline and not directly into wood. Provide stainless steel security hinge pins with set screws.

4. Adjustment: Provide sliding/folding hardware capable of specified amount of compensation and adjustments without needing to remove panels from tracks, in width, 1/8” (3 mm) per hinge and in height, ¼” up and down.

5. Finish for Exposed Hardware: dark bronze anodized, E6 C34.

F. Weather stripping: Provide manufacturer’s standard double layer EPDM or brush seals with a two layer polyamide fin at both the inner and outer edge of door panels or on frame for sealing between panels and between panel and frame.

2.03 FABRICATION

A. Use solid, three layer, cross grained frame and panel profiles connected to exterior aluminum extrusion, hinges and splines, sliding and folding hardware, locking hardware and handles, threshold and track, glass and glazing and weather stripping as specified herein to make a folding glass wall. Factory pre-assemble as is standard for manufacturer and ship with all components and installation instructions.

B. Sizes and Configurations: Custom dimensions, number of panels, and configurations are indicated on Drawings. Swinging and stacking directions: Indicated on Drawings.

2.04 ACCESSORIES

A. Provide the Opening Screen Wall, a motorized, overhead, retractable, rolling solar/insect screen. Provide weather sealed tubular motor concealed in a roll tube, a three-position switch, a protective box, a load bar and vinyl coated screen. Looking from inside for screens for inward opening units and outside for screens for outward opening units, switches on right [OR left].
PART 3 - EXECUTION

3.01 ERECTION

A. Because of the large dimensions involved and the weight and movement of the panels, verify the structural integrity of the header such that the maximum deflection with the live load is limited to be the lesser of L/720 of the span and $\frac{1}{4}$”.

B. Examine surfaces of openings and verify dimensions; verify rough openings are level, plumb, and square, with no unevenness, bowing, or bumps on floor.

C. Installation of units constitutes acceptance of existing conditions.

3.02 INSTALLATION

A. Install frame in accordance with manufacturer's recommendations and installation instructions. Properly flash and waterproof around the perimeter of the opening.

B. Installer to provide appropriate anchorage devices and to securely and rigidly fit frame in place, absolutely level, straight, plumb and square. Install frame in proper elevation, plane and location, and in proper alignment with other work.

C. If necessary, provide drain connections from lower track.

D. Install panels, handles and lock set in accordance with manufacturer's recommendations and installation instructions.

E. If necessary, adjust hardware for proper operation.

F. Finishing: Field finish as specified in Division 9 section “Painting”; seal and finish promptly after installation and prior to exposure to weather in accordance with manufacturer recommendations.

G. Accessories: Screens; install in accordance with screen manufacturer's recommendations and installation instructions.

END OF SECTION 08 43 33
SECTION 08 52 13

ALUMINUM-CLAD WOOD CASEMENT AND AWNING WINDOWS

PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Aluminum-clad wood casement and awning windows.

1.02 PERFORMANCE REQUIREMENTS

A. Windows shall be Hallmark certified to a rating of in accordance with ANSI/AAMA/NWWDA 101/I.S.2/A440-08.

B. Window Unit Air Leakage, ASTM E 283, 1.57 psf (25 mph): 0.05 cfm per square foot of frame or less.

C. Window Unit Water Penetration: No water penetration through window unit when tested in accordance with ASTM E 547, under static pressure of 7.5 psf (52 mph) after 4 cycles of 5 minutes each, with water being applied at a rate of 5 gallons per hour per square foot.

1.03 SUBMITTALS

A. Comply with Division 1 requirements.

B. Product Data: Submit manufacturer's product data, including installation instructions.

C. Shop Drawings: Submit manufacturer's shop drawings, indicating dimensions, construction, component connections and locations, anchorage methods and locations, hardware locations, and installation details.

D. Samples: Submit full-size or partial full-size sample of window illustrating glazing system, quality of construction, and color of finish.

E. Warranty: Submit manufacturer’s standard warranty.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Delivery: Deliver materials to site undamaged in manufacturer's or sales branch's original, unopened containers and packaging, with labels clearly identifying manufacturer and product name. Include installation instructions.

B. Storage: Store materials in an upright position, off ground, under cover, and protected from weather, direct sunlight, and construction activities.

C. Handling: Protect materials and finish during handling and installation to prevent damage.
PART 2 - PRODUCTS

2.01 MANUFACTURER

A. Pella Corporation, 102 Main Street, Pella, Iowa 50219. Toll Free (800) 54-PELLA. Phone (641) 621-1000. Website www.pella.com.

2.02 ALUMINUM-CLAD WOOD CASEMENT AND AWNING WINDOWS

A. Aluminum-Clad Wood Casement and Awning Windows: Architect Series factory-assembled aluminum-clad wood windows with outward-opening sash installed in frame and/or fixed unit.

B. Frame:
1. Select woods, water-repellent, preservative-treated with EnduraGuard® in accordance with WDMA I.S.-4. EnduraGuard includes water-repellency, three active fungicides and an insecticide applied to the frame.
2. Interior Exposed Surfaces: Pine.
4. Overall Frame Depth: 5 inches (127 mm).

C. Sash:
1. Select woods, water-repellent, preservative-treated with EnduraGuard in accordance with WDMA I.S.-4. EnduraGuard includes water-repellency, three active fungicides and an insecticide applied to the sash.
2. Interior Exposed Surfaces: Pine.
4. Corners: Mortised and tenoned, glued and secured with metal fasteners.
5. Sash Thickness: 1-3/4 inches (45 mm).

D. Weather Stripping:
1. Dual weather stripping.
2. Continuous, flexible, Santoprene material in dual-durometer design.
3. Units shall have welded corners, compressed between frame and sash for positive seal on all 4 sides.
4. Secondary PVC leaf-type weather strip between sash and frame for positive seals on all 4 sides.

2.03 GLAZING

A. Glazing:
1. Float Glass: ASTM C 1036, Quality 1.
2. Type: Silicone-glazed 11/16-inch dual-seal, insulating glass, multi-layer Low-E coated with argon

2.04 SCREENS

A. Insect Screens: Standard.
2. Screen Cloth: Vinyl-coated fiberglass, 18/16 mesh.
3. Set in aluminum frame fitted to inside of window.
4. Complete with necessary hardware.
5. Screen Frame Finish: Baked enamel.
2.05 HARDWARE

A. A. Operator:
1. Steel worm-gear operator with hardened gears.
2. Operator Base: Zinc die cast with painted finish.
5. External Hardware Salt Spray Exposure, ASTM B 117: Exceed 1,000 hours.

B. Crank Handle Finish
1. Integrated Folding Crank: Baked enamel, white.

C. Locking System: SureLock System.
1. Single-handle locking system.
2. Operate positive-acting arms that reach out and pull sash into locked position.
3. Casement Windows: One installed on sash 29 inches and smaller in frame height, 2 unison operating locks installed on sash over 29 inches in frame height.
4. Awning Windows: One installed on sash 29 inches and smaller in frame width, 2 unison operating locks installed on sash over 29 inches in frame width.
5. Lock Handle Finish: Baked enamel, white.

2.06 TOLERANCES

A. Windows shall accommodate the following opening tolerances:
1. Vertical Dimensions Between High and Low Points: Plus 1/4 inch, minus 0 inch.
2. Width Dimensions: Plus 1/4 inch, minus 0 inch.
3. Building Columns or Masonry Openings: Plus or minus 1/4 inch from plumb.

2.07 FINISH

1. Exterior aluminum surfaces shall be finished with the following multi-stage system:
   a. Clean and etch aluminum surface of oxides.
   b. Pre-treat with chrome phosphate conversion coating.
   c. Pre-treat with chromic acid sealer/rinse.
   d. Top coat with baked-on polyester enamel.
2. Color: Black.
3. Performance Requirements: Exterior aluminum finishes shall meet or exceed the following performance requirements of AAMA 2605:
   a. Dry Film Hardness: Eagle Turquoise Pencil, F minimum.
   b. Film Adhesion: 1/16-inch crosshatch, dry, wet, boiling water.
   d. Abrasion Resistance: Falling sand coefficient value of 20 minimum.
   e. Chemical Resistance: 10 percent Muriatic acid, 15 minutes. Mortar pat test, 24 hours.
   f. Detergent Resistance: 3 percent at 100 degrees F, 72 hours.
   g. Corrosion Resistance: Humidity, 3,000 hours. Salt spray exceeds 3,000 hours.

B. Interior Finish: Factory finished with 1 prime coat and 1 top coat of White.

2.08 INSTALLATION ACCESSORIES

A. Flashing/Sealant Tape: Pella SmartFlash.
1. Aluminum-foil-backed butyl window and door flashing tape.
2. Maximum Total Thickness: 0.013 inch.
3. UV resistant.
4. Verify sealant compatibility with sealant manufacturer.

B. Interior Insulating-Foam Sealant: Low-expansion, low-pressure polyurethane insulating window and door foam sealant.

C. Exterior Perimeter Sealant: “Pella Window and Door Installation Sealant” or equivalent high quality, multi-purpose sealant as specified in the joints sealant section.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine areas to receive windows. Notify Architect of conditions that would adversely affect installation or subsequent use. Do not proceed with installation until unsatisfactory conditions are corrected.

3.02 INSTALLATION

A. Install windows in accordance with manufacturer's instructions and approved shop drawings.

B. Install windows to be weather-tight and freely operating.

C. Maintain alignment with adjacent work.

D. Secure assembly to framed openings, plumb and square, without distortion.

E. Integrate window system installation with exterior water-resistant barrier using flashing/sealant tape. Apply and integrate flashing/sealant tape with water-resistant barrier using watershed principles in accordance with window manufacturer's instructions.

F. Place interior seal around window perimeter to maintain continuity of building thermal and air barrier using insulating-foam sealant.

G. Seal window to exterior wall cladding with sealant and related backing materials at perimeter of assembly.

H. Leave windows closed and locked.

3.03 CLEANING

A. Clean window frames and glass in accordance with Division 1 requirements.

B. Do not use harsh cleaning materials or methods that would damage finish.

C. Remove labels and visible markings.

END OF SECTION 08 52 13
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes commercial door hardware for the following:
   1. Swinging doors.
   2. Sliding doors.
   3. Other doors to the extent indicated.

B. Door hardware includes, but is not necessarily limited to, the following:
   1. Mechanical door hardware.
   2. Cylinders specified for doors in other sections.

C. Related Sections:
   1. Division 08 Section “Door Hardware Schedule”.
   2. Division 08 Section “Hollow Metal Doors and Frames”.
   3. Division 08 Section “Flush Wood Doors”.

D. Codes and References: Comply with the version year adopted by the Authority Having Jurisdiction.
   4. State Building Codes, Local Amendments.

E. Standards: All hardware specified herein shall comply with the following industry standards:
   1. ANSI/BHMA Certified Product Standards - A156 Series

1.02 SUBMITTALS

A. Product Data: Manufacturer's product data sheets including installation details, material descriptions, dimensions of individual components and profiles, operational descriptions and finishes.

B. Door Hardware Schedule: Prepared by or under the supervision of supplier, detailing fabrication and assembly of door hardware, as well as procedures and diagrams. Coordinate the final Door Hardware Schedule with doors, frames, and related work to ensure proper size, thickness, hand, function, and finish of door hardware.
   1. Format: Comply with scheduling sequence and vertical format in DHI's "Sequence and Format for the Hardware Schedule."
2. Organization: Organize the Door Hardware Schedule into door hardware sets indicating complete designations of every item required for each door or opening. Organize door hardware sets in same order as in the Door Hardware Sets at the end of Part 3. Submittals that do not follow the same format and order as the Door Hardware Sets will be rejected and subject to resubmission.

3. Content: Include the following information:
   a. Type, style, function, size, label, hand, and finish of each door hardware item.
   b. Manufacturer of each item.
   c. Fastenings and other pertinent information.
   d. Location of door hardware set, cross-referenced to Drawings, both on floor plans and in door and frame schedule.
   e. Explanation of abbreviations, symbols, and codes contained in schedule.
   f. Mounting locations for door hardware.
   g. Door and frame sizes and materials.

4. Submittal Sequence: Submit the final Door Hardware Schedule at earliest possible date, particularly where approval of the Door Hardware Schedule must precede fabrication of other work that is critical in the Project construction schedule. Include Product Data, Samples, Shop Drawings of other work affected by door hardware, and other information essential to the coordinated review of the Door Hardware Schedule.

C. Shop Drawings: Details of electrified access control hardware indicating the following:

1. Wiring Diagrams: Upon receipt of approved schedules, submit detailed system wiring diagrams for power, signaling, monitoring, communication, and control of the access control system electrified hardware. Differentiate between manufacturer-installed and field-installed wiring. Include the following:
   a. Elevation diagram of each unique access controlled opening showing location and interconnection of major system components with respect to their placement in the respective door openings.
   b. Complete (risers, point-to-point) access control system block wiring diagrams.

2. Electrical Coordination: Coordinate with related Division 26 Electrical Sections the voltages and wiring details required at electrically controlled and operated hardware openings.

D. Keying Schedule: Prepared under the supervision of the Owner, separate schedule detailing final keying instructions for locksets and cylinders in writing. Include keying system explanation, door numbers, key set symbols, hardware set numbers and special instructions. Owner to approve submitted keying schedule prior to the ordering of permanent cylinders.

E. Operating and Maintenance Manuals: Provide manufacturers operating and maintenance manuals for each item comprising the complete door hardware installation in quantity as required in Division 01, Closeout Submittals. The manual to include the name, address, and contact information of the manufacturers providing the hardware and their nearest service representatives. The final copies delivered after completion of
the installation test to include "as built" modifications made during installation, checkout, and acceptance.

F. Warranties and Maintenance: Special warranties and maintenance agreements specified in this Section.

1.03 QUALITY ASSURANCE

A. Manufacturers Qualifications: Engage qualified manufacturers with a minimum 5 years of documented experience in producing hardware and equipment similar to that indicated for this Project and that have a proven record of successful in-service performance.

B. Installer Qualifications: Installers, trained by the primary product manufacturers, with a minimum 3 years documented experience installing both standard and electrified builders hardware similar in material, design, and extent to that indicated for this Project and whose work has resulted in construction with a record of successful in-service performance.

C. Door Hardware Supplier Qualifications: Experienced commercial door hardware distributors with a minimum 5 years documented experience supplying both mechanical and electromechanical hardware installations comparable in material, design, and extent to that indicated for this Project. Supplier recognized as a factory direct distributor in good standing by the manufacturers of the primary materials with a warehousing facility in Project's vicinity. Supplier to have on staff a certified Architectural Hardware Consultant (AHC) available during the course of the Work to consult with Contractor, Architect, and Owner concerning both standard and electromechanical door hardware and keying.

1. Scheduling Responsibility: Preparation of door hardware and keying schedules.

D. Source Limitations: Obtain each type and variety of Door Hardware specified in this Section from a single source, qualified supplier unless otherwise indicated.

1. Electrified modifications or enhancements made to a source manufacturer's product line by a secondary or third party source will not be accepted.

2. Provide electromechanical door hardware from the same manufacturer as mechanical door hardware, unless otherwise indicated.

E. Regulatory Requirements: Comply with NFPA 70, NFPA 80, NFPA 101 and ANSI A117.1 requirements and guidelines as directed in the model building code including, but not limited to, the following:

1. Where indicated to comply with accessibility requirements, comply with Americans with Disabilities Act (ADA), "Accessibility Guidelines for Buildings and Facilities (ADAAG)," ANSI A117.1 as follows:

   a. Handles, Pulls, Latches, Locks, and other Operating Devices: Shape that is easy to grasp with one hand and does not require tight grasping, tight pinching, or twisting of the wrist.

   b. Door Closers: Comply with the following maximum opening-force requirements indicated:

      1) Interior Hinged Doors: 5 lbf applied perpendicular to door.
2) Fire Doors: Minimum opening force allowable by authorities having jurisdiction.

c. Thresholds: Not more than 1/2 inch high. Bevel raised thresholds with a slope of not more than 1:2.

2. NFPA 101: Comply with the following for means of egress doors:

a. Latches, Locks, and Exit Devices: Not more than 15 lbf to release the latch. Locks shall not require the use of a key, tool, or special knowledge for operation.

b. Thresholds: Not more than 1/2 inch high.

3. Fire-Rated Door Assemblies: Provide door hardware for assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to NFPA 252 (neutral pressure at 40" above sill) or UL-10C.

a. Test Pressure: Positive pressure labeling.

F. Each unit to bear third party permanent label demonstrating compliance with the referenced standards.

G. Keying Conference: Conduct conference to comply with requirements in Division 01 Section "Project Meetings." Keying conference to incorporate the following criteria into the final keying schedule document:

1. Function of building, purpose of each area and degree of security required.
2. Plans for existing and future key system expansion.
3. Requirements for key control storage and software.
4. Installation of permanent keys, cylinder cores and software.
5. Address and requirements for delivery of keys.

H. Pre-Submittal Conference: Conduct coordination conference in compliance with requirements in Division 01 Section "Project Meetings" with attendance by representatives of Supplier(s), Installer(s), and Contractor(s) to review proper methods and the procedures for receiving, handling, and installing door hardware.

1. Prior to installation of door hardware, conduct a project specific training meeting to instruct the installing contractors’ personnel on the proper installation and adjustment of their respective products. Product training to be attended by installers of door hardware (including electromechanical hardware) for aluminum, hollow metal and wood doors. Training will include the use of installation manuals, hardware schedules, templates and physical product samples as required.
2. Inspect and discuss electrical roughing-in, power supply connections, and other preparatory work performed by other trades.
3. Review sequence of operation narratives for each unique access controlled opening.
4. Review and finalize construction schedule and verify availability of materials.
5. Review the required inspecting, testing, commissioning, and demonstration procedures
I. At completion of installation, provide written documentation that components were applied to manufacturer's instructions and recommendations and according to approved schedule.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Inventory door hardware on receipt and provide secure lock-up and shelving for door hardware delivered to Project site. Do not store electronic access control hardware, software or accessories at Project site without prior authorization.

B. Tag each item or package separately with identification related to the final Door Hardware Schedule, and include basic installation instructions with each item or package.

C. Deliver, as applicable, permanent keys, cylinders, cores, access control credentials, software and related accessories directly to Owner via registered mail or overnight package service. Instructions for delivery to the Owner shall be established at the "Keying Conference".

1.05 COORDINATION

A. Templates: Obtain and distribute to the parties involved templates for doors, frames, and other work specified to be factory prepared for installing standard and electrified hardware. Check Shop Drawings of other work to confirm that adequate provisions are made for locating and installing hardware to comply with indicated requirements.

B. Door Hardware and Electrical Connections: Coordinate the layout and installation of scheduled electrified door hardware and related access control equipment with required connections to source power junction boxes, low voltage power supplies, detection and monitoring hardware, and fire and detection alarm systems.

C. Door and Frame Preparation: Related Division 08 Sections (Steel, Aluminum and Wood) doors and corresponding frames are to be prepared, reinforced and pre-wired (if applicable) to receive the installation of the specified electrified, monitoring, signaling and access control system hardware without additional in-field modifications.

1.06 WARRANTY

A. General Warranty: Reference Division 01, General Requirements. Special warranties specified in this Article shall not deprive Owner of other rights Owner may have under other provisions of the Contract Documents and shall be in addition to, and run concurrent with, other warranties made by Contractor under requirements of the Contract Documents.

B. Warranty Period: Written warranty, executed by manufacturer(s), agreeing to repair or replace components of standard and electrified door hardware that fails in materials or workmanship within specified warranty period after final acceptance by the Owner. Failures include, but are not limited to, the following:

1. Structural failures including excessive deflection, cracking, or breakage.
2. Faulty operation of the hardware.
3. Deterioration of metals, metal finishes, and other materials beyond normal weathering.
4. Electrical component defects and failures within the systems operation.
C. Standard Warranty Period: One year from date of Substantial Completion, unless otherwise indicated.

D. Special Warranty Periods:
   1. Twenty five years for manual surface door closers.

1.07 MAINTENANCE SERVICE

A. Maintenance Tools and Instructions: Furnish a complete set of specialized tools and maintenance instructions as needed for Owner's continued adjustment, maintenance, and removal and replacement of door hardware.

B. Continuing Service: Beginning at Substantial Completion, and running concurrent with the specified warranty period, provide continuous (6) months full maintenance including repair and replacement of worn or defective components, lubrication, cleaning, and adjusting as required for proper door opening operation. Provide parts and supplies as used in the manufacture and installation of original products.

PART 2 - PRODUCTS

2.01 SCHEDULED DOOR HARDWARE

A. General: Provide door hardware for each door to comply with requirements in Door Hardware Sets and each referenced section that products are to be supplied under.

   1. Designations: Requirements for quantity, item, size, finish or color, grade, function, and other distinctive qualities of each type of door hardware are indicated in the Door Hardware Sets at the end of Part 3. Products are identified by using door hardware designations, as follows:

      a. Named Manufacturer's Products: Product designation and manufacturer are listed for each door hardware type required for the purpose of establishing requirements. Manufacturers' names are abbreviated in the Door Hardware Schedule.

B. Substitutions: Requests for substitution and product approval for inclusive mechanical and electromechanical door hardware in compliance with the specifications must be submitted in writing and in accordance with the procedures and time frames outlined in Division 01, Substitution Procedures. Approval of requests is at the discretion of the architect, owner, and their designated consultants.

2.02 HANGING DEVICES

A. Hinges: ANSI/BHMA A156.1 certified butt hinges with number of hinge knuckles as specified in the Door Hardware Sets.

   1. Quantity: Provide the following hinge quantity, unless otherwise indicated:

      a. Two Hinges: For doors with heights up to 60 inches.
      b. Three Hinges: For doors with heights 61 to 90 inches.
      c. Four Hinges: For doors with heights 91 to 120 inches.
      d. For doors with heights more than 120 inches, provide 4 hinges, plus 1 hinge for every 30 inches of door height greater than 120 inches.
2. Hinge Size: Provide the following, unless otherwise indicated, with hinge widths sized for door thickness and clearances required:
   a. Widths up to 3’0”: 4-1/2” standard or heavy weight as specified.
   b. Sizes from 3’1” to 4’0”: 5” standard or heavy weight as specified.

3. Hinge Weight and Base Material: Unless otherwise indicated, provide the following:
   a. Exterior Doors: Heavy weight, non-ferrous, ball bearing or oil impregnated bearing hinges unless Hardware Sets indicate standard weight.

4. Hinge Options: Comply with the following where indicated in the Hardware Sets or on Drawings:
   a. Non-removable Pins: Provide set screw in hinge barrel that, when tightened into a groove in hinge pin, prevents removal of pin while door is closed; for the following applications:
      1) Out-swinging exterior doors.

5. Acceptable Manufacturers:
   a. Hager Companies (HA).
   b. McKinney Products (MK).

B. Interior Hinges: Surface mounted invisible hinges
   1. Acceptable Manufacturers:
      a. EZY Jamb (EZ).
      b. Soss Hinges (SO).

C. Sliding Door Hardware: Sliding door hardware is to be of type and design as specified and should comply with ANSI/BHMA A156.14.
   1. Sliding Bi-Passing Pocket Door Hardware: Provide complete sets consisting of track, hangers, stops, bumpers, floor channel, guides, and accessories indicated.
   2. Bi-folding Door Hardware: Rated for door panels weighing up to 125 lb.
   3. Pocket Sliding Door Hardware: Rated for doors weighing up to 200 lb.
      a. Acceptable Manufacturers:
         1) Pemko Manufacturing (PE).
         2) Richards-Wilcox, Inc. (RW).

2.03 CYLINDERS AND KEYING

A. General: Cylinder manufacturer to have minimum (10) years experience designing secured master key systems and have on record a published security keying system policy.
B. Source Limitations: Obtain each type of keyed cylinder and keys from the same source manufacturer as locksets and exit devices, unless otherwise indicated.

1. Acceptable Manufacturers:
   a. Corbin Russwin Hardware (RU).
   b. Sargent Manufacturing (SA).
   c. Yale Locks and Hardware (YA).

C. Cylinders: Original manufacturer cylinders complying with the following:
   1. Mortise Type: Threaded cylinders with rings and straight- or clover-type cam.
   2. Rim Type: Cylinders with back plate, flat-type vertical or horizontal tailpiece, and raised trim ring.

D. Keying System: Each type of lock and cylinders to be factory keyed. Conduct specified "Keying Conference" to define and document keying system instructions and requirements. Furnish factory cut, nickel-silver large bow permanently inscribed with a visual key control number as directed by Owner. Incorporate decisions made in keying conference, and as follows:

E. Key Quantity: Provide the following minimum number of keys:
   1. Top Master Key: One (1)
   2. Change Keys per Cylinder: Two (2)

F. Construction Keying: Provide construction master keyed cylinders or temporary keyed construction cores where specified. Provide construction master keys in quantity as required by project Contractor. Replace construction cores with permanent cores. Furnish permanent cores for installation as directed under specified "Keying Conference".

2.04 LOCK AND LATCH STRIKES

A. Strikes: Provide manufacturer's standard strike with strike box for each latch or lock bolt, with curved lip extended to protect frame, finished to match door hardware set, unless otherwise indicated, and as follows:
   1. Flat-Lip Strikes: For locks with three-piece antifriction latchbolts, as recommended by manufacturer.

B. Standards: Comply with the following:

C. All door closers specified herein shall meet or exceed the following criteria:
   1) General: Door closers to be from one manufacturer, matching in design and style, with the same type door preparations and templates regardless of application or spring size. Closers to be non-handed with full sized covers including installation and adjusting information on inside of cover.
2. Standards: Closers to comply with UL-10C and UBC 7-2 for Positive Pressure Fire Test and be U.L. listed for use of fire rated doors.

3. Cycle Testing: Provide closers which have surpassed 10 million cycles in a test witnessed and verified by UL.

4. Size of Units: Comply with manufacturer's written recommendations for sizing of door closers depending on size of door, exposure to weather, and anticipated frequency of use. Where closers are indicated for doors required to be accessible to the physically handicapped, provide units complying with ANSI ICC/A117.1.

5. Closer Arms: Provide heavy duty, forged steel closer arms unless otherwise indicated in Hardware Sets.
   a. Where closers are indicated to have mechanical dead-stop, provide heavy duty arms and brackets with an integral positive stop.
   b. Where closers are indicated to have mechanical hold open, provide heavy duty units with an additional built-in mechanical holder assembly designed to hold open against normal wind and traffic conditions. Holder to be manually selectable to on-off position.
   c. Where closers are indicated to have a cushion-type stop, provide heavy duty arms and brackets with spring stop mechanism to cushion door when opened to maximum degree.
   d. Closers shall not be installed on exterior or corridor side of doors; where possible install closers on door for optimum aesthetics. Provide drop plates or other accessories as required for proper mounting.

6. Closer Accessories: Provide door closer accessories including custom templates, special mounting brackets, spacers and drop plates, and through-bolt or security type fasteners as specified in the door Hardware Sets.

D. Door Closers, Surface Mounted (Commercial Duty): ANSI/BHMA 156.4, Grade 1 certified surface mounted, institutional grade door closers with complete spring power adjustment, sizes 1 thru 6; and fully operational adjustable according to door size, frequency of use, and opening force. Closers to be rack and pinion type, one piece cast iron or aluminum alloy body construction, with adjustable backcheck, closing sweep, and latch speed control valves. Provide non-handed units standard.

1. Acceptable Manufacturers:
   a. Corbin Russwin Hardware (RU) - DC6000 Series.
   b. Norton Door Controls (NO) - 8500 Series.
   c. Sargent Manufacturing (SA) - 1431 Series.
   d. Yale Locks and Hardware (YA) - 3500 Series.

2.05 DOOR STOPS AND HOLDERS

   a. General: Door stops and holders to be of type and design as specified below or in the Hardware Sets.

   A. Door Stops and Bumpers: ANSI/BHMA A156.16, Grade 1 certified door stops and wall bumpers. Provide wall bumpers, either convex or concave types with anchorage as indicated, unless floor or other types of door stops are specified in Hardware Sets. Do
not mount floor stops where they will impede traffic. Where floor or wall bumpers are not appropriate, provide overhead type stops and holders.

1. Acceptable Manufacturers:
   a. Rockwood Manufacturing (RO).

2.06 ARCHITECTURAL SEALS

a. General: Thresholds, weatherstripping, and gasket seals to be of type and design as specified below or in the Hardware Sets. Provide continuous weatherstrip gasketing on exterior doors and provide smoke, light, or sound gasketing on interior doors where indicated. At exterior applications provide non-corrosive fasteners and elsewhere where indicated.

b. Smoke Labeled Gasketing: Assemblies complying with NFPA 105 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for smoke control ratings indicated, based on testing according to UL 1784.

   1) Provide smoke labeled perimeter gasketing at all smoke labeled openings.

c. Fire Labeled Gasketing: Assemblies complying with NFPA 80 that are listed and labeled by a testing and inspecting agency acceptable to authorities having jurisdiction, for fire ratings indicated, based on testing according to UL-10C.

2. Provide intumescent seals as indicated to meet UL10C Standard for Positive Pressure Fire Tests of Door Assemblies, and UBC 7-2, Fire Tests of Door Assemblies.

   A. Sound-Rated Gasketing: Assemblies that are listed and labeled by a testing and inspecting agency, for sound ratings indicated, based on testing according to ASTM E 1408.

   B. Replaceable Seal Strips: Provide only those units where resilient or flexible seal strips are easily replaceable and readily available from stocks maintained by manufacturer.

   C. Acceptable Manufacturers:

      1. Pemko Manufacturing (PE).

3. ELECTRONIC ACCESSORIES

D. Power Supplies: Provide Nationally Recognized Testing Laboratory Listed 12VDC or 24VDC (field selectable) filtered and regulated power supplies. Include battery backup option with integral battery charging capability in addition to operating the DC load in event of line voltage failure. Provide the least number of units, at the appropriate amperage level, sufficient to exceed the required total draw for the specified electrified hardware and access control equipment.

   1. Acceptable Manufacturers:
a. Securitron (SU) - BPS Series.

2.07 FABRICATION

a. Fasteners: Provide door hardware manufactured to comply with published templates generally prepared for machine, wood, and sheet metal screws. Provide screws according to manufacturers recognized installation standards for application intended.

2.08 FINISHES

A. Standard: Designations used in the Hardware Sets and elsewhere indicate hardware finishes complying with ANSI/BHMA A156.18, including coordination with traditional U.S. finishes indicated by certain manufacturers for their products.

a. Provide quality of finish, including thickness of plating or coating (if any), composition, hardness, and other qualities complying with manufacturer's standards, but in no case less than specified by referenced standards for the applicable units of hardware.

b. Protect mechanical finishes on exposed surfaces from damage by applying a strippable, temporary protective covering before shipping.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine scheduled openings, with Installer present, for compliance with requirements for installation tolerances, labeled fire door assembly construction, wall and floor construction, and other conditions affecting performance.

B. Notify architect of any discrepancies or conflicts between the door schedule, door types, drawings and scheduled hardware. Proceed only after such discrepancies or conflicts have been resolved in writing.

1. PREPARATION

C. Hollow Metal Doors and Frames: Comply with ANSI/DHI A115 series.

3.02 INSTALLATION

A. Install each item of mechanical and electromechanical hardware and access control equipment to comply with manufacturer's written instructions and according to specifications.

1. Installers are to be trained and certified by the manufacturer on the proper installation and adjustment of fire, life safety, and security products including: hanging devices; locking devices; closing devices; and seals.

B. Mounting Heights: Mount door hardware units at heights indicated in following applicable publications, unless specifically indicated or required to comply with governing regulations:
2. Wood Doors: DHI WDHS.3, "Recommended Locations for Architectural Hardware for Wood Flush Doors."
3. Where indicated to comply with accessibility requirements, comply with ANSI A117.1 "Accessibility Guidelines for Buildings and Facilities."
4. Provide blocking in drywall partitions where wall stops or other wall mounted hardware is located.

C. Retrofitting: Install door hardware to comply with manufacturer's published templates and written instructions. Where cutting and fitting are required to install door hardware onto or into surfaces that are later to be painted or finished in another way, coordinate removal, storage, and reinstallation of surface protective trim units with finishing work specified in Division 9 Sections. Do not install surface-mounted items until finishes have been completed on substrates involved.

D. Thresholds: Set thresholds for exterior and acoustical doors in full bed of sealant complying with requirements specified in Division 7 Section "Joint Sealants."

E. Storage: Provide a secure lock up for hardware delivered to the project but not yet installed. Control the handling and installation of hardware items so that the completion of the work will not be delayed by hardware losses before and after installation.

3.03 FIELD QUALITY CONTROL

A. Field Inspection: Supplier will perform a final inspection of installed door hardware and state in report whether work complies with or deviates from requirements, including whether door hardware is properly installed, operating and adjusted.

3.04 ADJUSTING

A. Initial Adjustment: Adjust and check each operating item of door hardware and each door to ensure proper operation or function of every unit. Replace units that cannot be adjusted to operate as intended. Adjust door control devices to compensate for final operation of heating and ventilating equipment and to comply with referenced accessibility requirements.

3.05 CLEANING AND PROTECTION

A. Protect all hardware stored on construction site in a covered and dry place. Protect exposed hardware installed on doors during the construction phase. Install any and all hardware at the latest possible time frame.

B. Clean adjacent surfaces soiled by door hardware installation.

C. Clean operating items as necessary to restore proper finish, and provide final protection and maintain conditions that ensure door hardware is without damage or deterioration at time of owner occupancy.

3.06 DEMONSTRATION

A. Instruct Owner's maintenance personnel to adjust, operate, and maintain mechanical and electromechanical door hardware.
3.07 DOOR HARDWARE SCHEDULE

A. The hardware sets represent the design intent and direction of the owner and architect. They are a guideline only and should not be considered a detailed hardware schedule. Discrepancies, conflicting hardware and missing items should be brought to the attention of the architect with corrections made prior to the bidding process. Omitted items not included in a hardware set should be scheduled with the appropriate additional hardware required for proper application and functionality.

   a. Refer to Section 080671, Door Hardware Schedule, for hardware sets.

   b. Manufacturer’s Abbreviations:

END OF SECTION 08 71 00
PART 1 - GENERAL

1.01 RELATED DOCUMENTS:

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes the following:
   1. Insulating glass units.

B. Related Sections:
   1. Division 08 Section “Hollow Metal Doors and Frames”.
   2. Division 10 Section “Toilet and Bath Accessories” for mirrors.

1.03 QUALITY ASSURANCE

A. Standards: Comply with applicable provisions and recommendations of:

B. Manufacturer's Qualifications: Provide glazing systems produced by a single manufacturer with not less than 5 years successful experience in the fabrication of assemblies of the type and quality required.

C. Installer's Qualifications: Interior glazed systems shall be installed by a firm that has not less than 5 years successful experience in the installation of systems similar to those required.

1.04 ACTION SUBMITTALS

A. Samples: Submit 12 inch square samples of each glass product. Submit 6 inch long samples of glazing sealant and glazing tape, for color review.

B. Manufacturer's Data: Submit manufacturers' technical data and instructions for installing and maintaining each glazing material.

C. Glazing Schedule: List glass types and thicknesses for each size opening and location. Use same designations indicated on Drawings.
1.05 DELIVERY, STORAGE AND HANDLING

A. Protect glazing materials and according to manufacturer's written instructions and as needed to prevent damage to glass, glazing and plastic wall panels materials from condensation, temperature changes, direct exposure to sun, or other causes.

1.06 EXTENDED WARRANTIES

A. General: Submit warranties signed by the respective manufacturers agreeing to repair or replace defective materials or workmanship within the specified warranty periods, starting from the date of substantial completion.
   1. Insulating Glass Units: Submit a ten (10) year warranty against defects of each of the insulating glass unit types specified, from manufacturer.
      a. Defects include but are not limited to loss of seal, interior clouding, discoloration, and other imperfections.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Glazing Manufacturers and Fabricators: Subject to compliance with requirements, firms producing glass products which may be incorporated into the work include the following:
   1. Advanced Glazing, Ltd.
   2. AFG Industries, Inc.
   5. General Glass International (GGI).
   7. J.E. Berkowitz, LP.
   8. LOF Glass, Inc.
  10. PPG Industries, Inc.
  11. Viracon, Inc.

2.02 GLASS, GENERAL

A. Primary Glass Standard: Provide primary glass which complies with ASTM C 1036 requirements for type, class and quality.

B. Heat-Treated Glass Standard: Provide heat-treated glass which complies with ASTM C 1048 requirements. Surface compression of heat strengthened glass shall be in the range of 3500 to 6500 psi.
   1. Provide heat treated glass where glass would be vulnerable to thermal breakage and where required for safety of persons.
   2. Provide fully tempered or heat strengthened glass where indicated or required by authorities having jurisdiction.
   3. Tempered glass shall comply with ANSI Z97.1.

C. Sizes: Fabricate glass to sizes required, with edge clearances and tolerances complying with recommendations of glass manufacturer. Provide thicknesses to comply with Building Code, and as recommended by glass manufacturer, unless greater thickness is indicated.
2.03 PRIMARY GLASS

A. Clear Float Glass: Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), ¼ inches (6.4 mm) thick.

B. Mirror Glass: Clear float glass conforming to specified standard, Quality q1, silvering, 1/4-inches (6.4 mm) thick.

2.04 HEAT-TREATED GLASS

A. Clear, Heat-Treated Float Glass: ASTM C 1048, Type I (transparent glass, flat), Class 1 (clear), Quality q3 (glazing select), kind as indicated below.
1. Kind HS (heat strengthened) where indicated.
2. Kind FT (fully tempered) where indicated.

B. Tempered Glass: Provide fully tempered glass only where safety glass is mandatory or where design pressures are beyond the capacity of heat strengthened glass. Tempered glass shall be free from inclusions.
1. Provide 1/4-inch (6.4 mm) thick tempered glass where indicated on drawings.
2. Provide 1/2-inch (12.7 mm) thick tempered glass at frameless and sliding glass panel locations.

2.05 COATED GLASS

A. Low-Emittance Coated Vision Glass: ASTM C 1376, coated by vacuum deposition (sputter-coating) process, and complying with other requirements specified.
1. Kind: Kind CV (coated vision glass), except that Kind CO (coated overhead glass) may be used where the lower edge of the glass is more than 6 feet (1.8 m) above the adjacent floor level or cannot be approached closer than 10 feet (3.0 m).
2. Glass: Clear float.

2.06 INSULATING GLASS UNITS

A. Insulating-Glass Units, General: Factory-assembled units consisting of sealed lites of glass separated by a dehydrated interspace, and complying with ASTM E 774 for Class CBA units.
1. Provide Low-E vacuum deposition-coated glass with coating on surface 2.
2. Provide Kind HS (heat-strengthened) float glass in place of annealed glass where needed to resist thermal stresses induced by differential shading of individual glass lites and to comply with glass design requirements specified in Part 1 "Performance Requirements" Article.
3. Provide Kind FT (fully tempered) or laminated glass lites where safety glass is indicated.
4. Overall Unit Thickness and Thickness of Each Lite: Dimensions indicated for insulating-glass units are nominal and the overall thicknesses of units are measured perpendicularly from outer surfaces of glass lites at unit's edge.
5. Sealing System: Dual seal, with manufacturer's standard primary and secondary sealants.
7. Spacer: Manufacturer's standard spacer material and construction.
8. Desiccant: Molecular sieve or silica gel, or blend of both.

B. U-Factor: As indicated.

C. Solar Heat-Gain Coefficient (SHGC): Provide aluminum windows with a whole-window SHGC maximum of 0.35, determined according to NFRC 200 procedures.
2.07 GLAZING MATERIALS

A. General: Provide standard color of glazing materials as selected by Architect. Comply with manufacturer's recommendations for applications and conditions at time of installation.

B. Polyurethane Glazing Gasket: Polyurethane gasket or stick tape, color to be selected by Architect, thickness and size as shown on drawings.

C. Cleaners, Primers and Sealers: Type recommended by sealant or gasket manufacturer.

D. Setting Blocks: Neoprene, silicone or EPDM, 70-90 durometer hardness, with proven compatibility with glazing materials used.

E. Spacers: Neoprene, silicone or EPDM, 40-50 durometer hardness with proven compatibility with glazing materials used.

F. Compressible Fillers: Closed-cell or waterproof-jacketed rod stock of synthetic rubber or plastic foam, proven to be compatible with sealants used, flexible and resilient, with 5-10 psi compression strength for 25% deflection.

G. Sealant: Neutral-curing silicone glazing sealant complying with ASTM C 920, Type S, Grade NS, Class 100/50, Use NT.
   1. VOC Content: For sealants used inside of the weatherproofing system, not more than 250 g/L when calculated according to 40 CFR 59, Subpart D.

2.08 INSULATING-GLASS TYPES

A. Glass Type: Low-e-coated, clear insulating safety glass.
   1. Overall Unit Thickness: 1 inch (25 mm).
   2. Thickness of Each Glass Lite: 6.0 mm.
   3. Outdoor Lite: Heat-strengthened float glass or Fully tempered float glass.
   4. Interspace Content: Air.
   5. Indoor Lite: Fully tempered float glass.
   8. Winter Nighttime U-Factor: 0.26 maximum.
   9. Summer Daytime U-Factor: 0.22 maximum.
   10. Solar Heat Gain Coefficient: 0.33 maximum.
   11. Provide safety glazing labeling.

PART 3 - EXECUTION

3.01 GENERAL

A. Each glazing installation must withstand normal temperature changes, and impact loading without failure of glass, failure of sealants or gaskets, deterioration of glazing materials and other defects in the work.

B. Protect glass from damage during handling and installation, and subsequent operation of glazed components of the work. Discard units with edge damage or other imperfections.

C. Glazing channel dimensions are intended to provide for necessary bite on glass, minimum edge clearance, and adequate tape or sealant thicknesses, with reasonable tolerances.
D. Comply with recommendations by manufacturers of glass and glazing products, except where more stringent requirements are indicated, including those of referenced glazing standards.

3.02 PREPARATION

A. Clean glazing channel and other framing members to receive glass, immediately before glazing. Remove coatings which are not firmly bonded to substrate.

B. Where sealants are used, apply primer or sealant to joint surfaces where recommended by sealant manufacturer.

3.03 GLAZING

A. Where indicated, provide spacers for size and spacing required for glass sizes larger than 50 United inches, except where gaskets or pre-shimmed tapes are used for glazing. Provide 1/4 inch minimum bite of spacer on glass and use thickness equal to sealant width, except with sealant tape use thickness slightly less than final compressed thickness of tape.

B. Set units of glass in each series with uniformity of pattern, draw, bow and similar characteristics.

C. Where sealants are used at butt joints, apply sealant in thin continuous clear bead. Tool sealant to a uniform, continuous, even profile.

D. Unless otherwise indicated mirrors in exercise and athletic rooms shall extend from top of base to ceiling and from wall to wall, with no horizontal joints and a minimum number of vertical joints. Penetrations of mirrors shall be accomplished solely with drilled holes or with cuts in the edge of the mirror. Splicing of mirror pieces is not permitted.

3.04 PROTECTION AND CLEANING

A. Remove and replace glass which is broken, chipped, cracked, abraded or damaged in other ways during construction period, including natural causes, accidents and vandalism.

B. Wash and polish glass on both faces not more than 4 days prior to date scheduled for inspections intended to establish Date of Substantial Completion in each area of project. Comply with glass manufacturer's recommendations for final cleaning.

END OF SECTION 08 80 00
PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specification Sections, apply to this Section.

1.02 SUMMARY

A. This Section includes fixed, extruded-aluminum storm-resistant louvers, fixed formed-metal acoustic louvers.

B. Related Sections:
   1. Division 08 Section "Hollow Metal Doors and Frames" for louvers in hollow-metal doors.
   2. Division 23 Sections for louvers that are a part of mechanical equipment.

1.03 SUBMITTALS

A. Product Data: For each type of product indicated.[ For louvers specified to bear AMCA seal, include printed catalog pages showing AMCA Certified Ratings Seals.]

B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other Work.
   1. Verify louver openings by field measurements before fabrication and indicate measurements on Shop Drawings.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
   1. Louvers, Storm Resistant:
      a. Airolite Company (The).
      c. Greenheck.
      d. Nystrom Building Products.
      e. Ruskin Company; Tomkins PLC.

2.02 MATERIALS

A. Aluminum Extrusions: ASTM B 221(ASTM B 221M), alloy 6063-T5 or T-52.

B. Aluminum Sheet: ASTM B 209(ASTM B 209M), alloy 3003 or 5005.

C. Fasteners: Of same basic metal and alloy as fastened metal or 300 Series stainless steel.

D. Bituminous Paint: Cold-applied asphalt emulsion complying with ASTM D 1187.
2.03 FABRICATION, GENERAL
A. Fabricate frames to fit in openings of sizes indicated, with allowances made for fabrication and installation tolerances, adjoining material tolerances, and perimeter sealant joints.
B. Join frame members to each other and to louver blades with fillet welds concealed from view.
C. Join frame members to each other and to louver blades with fillet welds, threaded fasteners, or both, as standard with louver manufacturer, concealed from view.

2.04 FIXED, EXTRUDED-ALUMINUM LOUVERS
A. Horizontal Storm-Resistant Louver.
   1. Frame and Blade Nominal Thickness: Not less than 0.060 inch (1.5 mm) for blades and 0.080 inch (2.0 mm) for frames.
   2. Performance Requirements:
      a. Free Area: Not less than 8.0 sq. ft. for 48-inch-wide by 48-inch-high louver.
      b. Air Performance: Not more than 0.10-inch wg static pressure drop at 500-fpm free-area velocity.
      c. Wind-Driven Rain Performance: Not less than 99 percent effectiveness when subjected to a rain fall rate of 3 inches per hour and a wind speed of 29 mph at a core area intake velocity of 350 fpm.
   3. Basis-of-Design Product: C/S Group RS-7315, or a comparable product of one of the specified manufacturers.

2.05 LOUVER SCREENS
A. General: Provide screen at interior face of each exterior louver.
B. Louver Screen Frames: Same kind and form of metal as indicated for louver to which screens are attached.
C. Louver Screening:
   1. Bird Screening: Aluminum or stainless steel, 1/2-inch (12.7-mm) square mesh, 0.063-inch (1.6-mm)-wire.

2.06 FINISHES
A. Aluminum, High-Performance Organic Finish: Two-coat thermocured system with fluoropolymer coats containing not less than 70 percent polyvinylidene fluoride resin by weight; complying with AAMA 2605.
   1. Color and Gloss: As selected from manufacturer's full range.

PART 3 - EXECUTION

3.01 INSTALLATION
A. Locate and place louvers and vents level, plumb, and at indicated alignment with adjacent work.
B. Use concealed anchorages where possible. Provide brass or lead washers fitted to screws where required to protect metal surfaces and to make a weathertight connection.
C. Provide perimeter reveals and openings of uniform width for sealants and joint fillers, as indicated.

D. Repair damaged finishes so no evidence remains of corrective work. Return items that cannot be refinished in the field to the factory, make required alterations, and refinish entire unit or provide new units.

E. Protect galvanized and nonferrous-metal surfaces from corrosion or galvanic action by applying a heavy coating of bituminous paint on surfaces that will be in contact with concrete, masonry, or dissimilar metals.

END OF SECTION 08 90 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data.

PART 2 - PRODUCTS

2.01 PERFORMANCE REQUIREMENTS

A. Fire-Resistance-Rated Assemblies: Provide materials and construction identical to those tested in assemblies per ASTM E 119 by an independent testing and inspecting agency acceptable to authorities having jurisdiction.

B. STC-Rated Assemblies: Provide materials and construction identical to those tested in assemblies per ASTM E 90 and classified per ASTM E 413 by a qualified independent testing and inspecting agency.

2.02 PANEL PRODUCTS

A. Provide in maximum lengths available to minimize end-to-end butt joints.

B. Interior Gypsum Board: ASTM C 1396/C 1396M, in thickness indicated, with manufacturer's standard edges. Regular type unless otherwise indicated Sag-resistant type for ceiling surfaces.
   1. Core: Regular
   2. Surface Paper: 100% recycled content paper on front, back and long edges
   3. Long Edges: Square
   4. Overall thickness: 5/8 inch
   5. Manufacturers:
      a. American Gypsum.
      b. CertainTeed Corp.
      c. Georgia-Pacific Gypsum LLC.

C. Water-Resistant Gypsum Backing Board: ASTM C 1396/C 1396M, in thickness indicated. Regular type unless otherwise indicated.
   1. Core: mold and moisture resistant gypsum core
   2. Surface Paper: 100% recycled content moisture/mold/mildew resistant paper on front, back and long edges
   3. Long Edges: Square
   4. Overall thickness: 5/8 inch
   5. Manufacturers:
      a. American Gypsum.
      b. CertainTeed Corp.
      c. Georgia-Pacific Gypsum LLC.

D. Cementitious Backer Units: ANSI A118.9, ASTM C 1288, or ASTM C 1325 compliant
1. Overall Thickness: ½ inch
2. Install in all locations receiving tile finish material or as indicated in drawings.
3. Retain option in "Products" Subparagraph below to limit products to those listed.
4. Products:
   a. C-Cure; C-Cure Board 990.
   b. CertainTeed Corp.; Fiber Cement
   c. USG Corporation; DUROCK Cement Board.

E. Trim Accessories: ASTM C 1047, formed from galvanized or aluminum-coated steel sheet, rolled zinc, plastic, or paper-faced galvanized-steel sheet.
   1. Provide corner bead at outside corners unless otherwise indicated.
   2. Provide LC-bead (J-bead) at exposed panel edges.
   3. Provide control joints where indicated.

F. Joint-Treatment Materials: ASTM C 475/C 475M.
   1. Joint Tape: Paper unless otherwise recommended by panel manufacturer.
   2. Joint Compounds: Drying-type, ready-mixed, all-purpose compounds or Setting-type taping compound and drying-type, ready-mixed, compounds for topping.
   3. Skim Coat: For final coat of Level 5 finish, use setting-type, sandable topping compound.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install gypsum board to comply with ASTM C 840.
   1. Isolate gypsum board assemblies from abutting structural and masonry work. Provide edge trim and acoustical sealant.

B. Install cementitious backer units to comply with ANSI A108.11.

C. Finishing Gypsum Board: ASTM C 840.
   1. At concealed areas, unless a higher level of finish is required for fire-resistance-rated assemblies, provide Level 1 finish: Embed tape at joints.
   2. At substrates for tile, provide Level 2 finish: Embed tape and apply separate first coat of joint compound to tape, fasteners, and trim flanges.
   3. Unless otherwise indicated, provide Level 4 finish: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges.
   4. Where indicated, provide Level 5 finish: Embed tape and apply separate first, fill, and finish coats of joint compound to tape, fasteners, and trim flanges. Apply skim coat to entire surface.

D. Cementitious Backer Units: Finish according to manufacturer's written instructions.

END OF SECTION 09 29 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data and Samples.

B. Obtain tile of each type and color or finish from same production run for each contiguous area

C. Deliver and store packaged materials in original containers with seals unbroken and labels intact until time of use.

PART 2 - PRODUCTS

2.01 CERAMIC TILE

A. Ceramic tile that complies with Standard grade requirements in ANSI A137.1, "Specifications for Ceramic Tile."

B. Tile Type CT-1: Factory-mounted, impervious natural clay or porcelain cushion-edged ceramic mosaic tile.
   1. Manufacturers: Fireclay Tile
      a. Fireclaytile.com
   2. Basis-of-Design Product: Recycled Ceramic Tiles, Debris Series
   3. Module Size: 2 by 8 inch
   7. Trim Units: Coordinated with sizes and coursing of adjoining flat tile.

C. Accessories: Provide vitreous china accessories of type and size indicated, suitable for installing by same method as adjoining wall tile.
   1. One soap holder for each shower and tub indicated.
   2. Color and Finish: Match adjoining glazed wall tile.

2.02 GLASS TILE

A. Glass Tile Type GT-1:
   1. Manufacturers: Eco Friendly Flooring, Inc.
      a. Ecofriendlyflooring.com
   2. Basis-of-Design Product: Recycled Glass Tiles
   3. Module Size: 1 by 1 inch
2.03 STONE THRESHOLDS

A. Stone Threshold Type TH-1:
   1. Stone Type: carrera marble, complying with ASTM C 1527, Classification II, Interior.
   4. Fabricate thresholds to be not more than 1/2 inch above adjoining finished floor surfaces, with transition edges beveled on a slope of no greater than 1:2.

2.04 INSTALLATION MATERIALS

A. Cementitious Backer Units: ANSI A118.9 or ASTM C 1325, 1/2 inch thick.
   1. Products:
      a. USG Corporation; DUROCK Cement Board.

B. Low-Emitting Materials: Adhesives and fluid-applied waterproofing membranes shall have a VOC content of 65 g/L or less.

C. Low-Emitting Materials: Adhesives and fluid-applied waterproofing membranes shall comply with Green Seal's GS-36 and with the testing and product requirements of the California Department of Health Services' "Standard Practice for the Testing of Volatile Organic Emissions from Various Sources Using Small-Scale Environmental Chambers."

D. Setting and Grouting Materials: Comply with material standards in ANSI's "Specifications for the Installation of Ceramic Tile" that apply to materials and methods indicated.
   1. Thin-Set Mortar Type: latex-portland cement.
   2. Thin-Set Mortar Type for Wood Subfloors: EGP latex-portland cement.
   3. Grout Type: Standard cement, unless otherwise indicated.
   4. Grout Type: Polymer modified, unless otherwise indicated.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with TCA's "Handbook for Ceramic Tile Installation" for TCA installation methods specified in tile installation schedules. Comply with parts of ANSI A108 Series "Specifications for Installation of Ceramic Tile" that are referenced in TCA installation methods, specified in tile installation schedules, and apply to types of setting and grouting materials used.
   1. For installations indicated below, follow procedures in ANSI's "Specifications for the Installation of Ceramic Tile" for providing 95 percent mortar coverage.
      a. Tile floors in wet areas.

B. Perform cutting and drilling of tile without marring visible surfaces. Carefully grind cut edges of tile abutting trim, finish, or built-in items for straight aligned joints. Fit tile closely to electrical outlets, piping, fixtures, and other penetrations so plates, collars, or covers overlap tile.

C. Lay tile in grid pattern unless otherwise indicated. Align joints where adjoining tiles on floor, base, walls, and trim are the same size.

D. Install cementitious backer units and treat joints according to ANSI A108.11.
E. Install waterproofing to comply with ANSI A108.13.

F. Install stone thresholds in same type of setting bed as adjacent floor unless otherwise indicated. At locations where mortar bed (thickset) would otherwise be exposed above adjacent floor finishes, set thresholds in latex-portland cement mortar (thin set).

G. Interior Floor Tile Installation Method(s):
   1. Over Wood Subfloors: TCA F144 (thin-set mortar bonded on cementitious backer units or fiber cement underlayment) TCA F150/160 (thin-set mortar on exterior-glue plywood).
   2. Over Waterproof Membranes on Wood Subfloors: TCA F121 (cement mortar bed).

H. Interior Wall Tile Installation Method(s):
   1. Over Wood Studs or Furring: TCA W244 (thin-set mortar on either cementitious backer units or fiber cement underlayment).
   2. Bathtub/Shower Wall Installations, Wood Studs or Furring: TCA B412 (thin-set mortar on either cementitious backer units or fiber cement underlayment).

END OF SECTION 09 30 00
PART 1 - GENERAL

1.01 SUMMARY

A. This Section includes ceilings consisting of acoustical panels and exposed suspension systems.

B. Related Sections: The following Sections contain requirements that relate to this Section:
   1. Division 09 Section "Gypsum Board" for gypsum board ceilings and soffits.

1.02 SUBMITTALS

A. Product Data: For each type of product specified.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Deliver acoustical panels and suspension system components to Project site in original, unopened packages and store them in a fully enclosed space where they will be protected against damage from moisture, direct sunlight, surface contamination, and other causes.

B. Before installing acoustical panels, permit them to reach room temperature and a stabilized moisture content.

C. Handle acoustical panels carefully to avoid chipping edges or damaging units in any way.

1.04 PROJECT CONDITIONS

A. Environmental Limitations: Do not install acoustical panel ceilings until spaces are enclosed and weatherproof, wet-work in spaces is complete and dry, work above ceilings is complete, and ambient temperature and humidity conditions are maintained at the levels indicated for Project when occupied for its intended use.

1.05 COORDINATION

A. Coordinate layout and installation of acoustical panels and suspension system with other construction that penetrates ceilings or is supported by them, including light fixtures, HVAC equipment, fire-suppression system, and partition assemblies.

PART 2 - PRODUCTS

2.01 ACOUSTICAL PANELS

A. Acoustical Panel Standard: Provide manufacturer's standard size panels of configuration indicated that comply with ASTM E1264 classifications as designated by types, patterns, acoustical ratings, and light reflectances, unless otherwise indicated.
1. Mounting Method for Measuring Noise Reduction Coefficient: Type E-400; plenum mounting in which face of test specimen is 15-3/4 inches (400 mm) away from test surface per ASTM E 795.

B. Manufacturers:
1. Armstrong World Industries, Inc.
2. Certainteed Corporation.
3. USG Interiors, Inc.

C. **ACT-01**: Water-Felted, Mineral Base Acoustical Panels with smooth, monolithic fine texture for general use in offices, community room, and computer room. Provide acoustical panels complying with the following:
   1. Product “Ultima”; Item 1912, non-sag type as manufactured by Armstrong World Industries.
   2. Classification: Panels fitting ASTM E1264 for Type IV, Form 2, Pattern E.
   3. Color: White
   4. Surface Finish: Manufacturer’s standard factory applied finish.
   5. Light Reflectance Coefficient: 0.90.
   6. Noise Reduction Coefficient: 0.70.
   7. Ceiling Attenuation Coefficient: 35.
   8. Edge Detail: Beveled tegular to fit Interlude 9/16-inch grid.
   10. Size: 24 x 24-inches.

2.02 **SYSTEMS, GENERAL**

A. Metal Suspension System Standard: Provide manufacturer's standard indirect-hung metal suspension systems of types, structural classifications, and finishes indicated that comply with applicable ASTM C 635 requirements.

B. Seismic Standard: Provide acoustical panel ceilings designed and installed to withstand the effects of earthquake motions according to the following:
   1. International Building Code requirements for Seismic Design Category C.

C. Manufacturers:
1. Armstrong World Industries, Inc.
2. Chicago Metallic Corporation.
3. USG Interiors, Inc.

D. Systems: Subject to compliance with requirements and as scheduled, provide:
   1. “Prelude XL” 15/16-inch exposed tee system as manufactured by Armstrong World Industries, or equal products of one of the specified manufacturers.

E. Double-Web, Steel Suspension System: Main and cross runners roll formed from cold-rolled steel sheet, prepainted, electrolytically zinc coated, or hot-dip galvanized according to ASTM A 653/653M, not less than G30 (Z90) coating designation, with prefinished 9/16-inch- (15-mm-) wide metal caps on flanges.
   1. Structural Classification: Heavy-duty system.
   2. End Condition of Cross Runners: Override (stepped) type.
   3. Face Design: Flat, flush.

F. Attachment Devices: Size for five times design load indicated in ASTM C 635, Table 1, Indirect Hung, unless otherwise indicated.
PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates and structural framing to which acoustical panel ceilings attach or abut, with Installer present, for compliance with requirements specified in this and other Sections that affect ceiling installation and anchorage, and other conditions affecting performance of acoustical panel ceilings.
   1. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Coordination: Furnish layouts for clips, and other ceiling anchors whose installation is specified in other Sections.

B. Measure each ceiling area and establish layout of acoustical panels to balance border widths at opposite edges of each ceiling. Avoid using less-than-half-width panels at borders, and comply with layout shown on reflected ceiling plans.

3.03 INSTALLATION

A. General: Install acoustical panel ceilings to comply with publications referenced below per manufacturer's written instructions and CISCA's "Ceiling Systems Handbook."
   3. Direct clip to metal suspension members.
   4. Space clips not more than 48 inches (1200 mm) o.c. along each member supported directly from metal suspension members, unless otherwise indicated; and provide direct clips not more than 8 inches (200 mm) from ends of each member.

B. Install edge moldings and trim of type indicated at perimeter of acoustical ceiling area and where necessary to conceal edges of acoustical panels.
   1. Apply acoustical sealant in a continuous ribbon concealed on back of vertical legs of moldings before they are installed.
   2. Screw attach moldings to substrate at intervals not more than 16 inches (400 mm) o.c. and not more than 3 inches (75 mm) from ends, leveling with ceiling suspension system to a tolerance of 1/8 inch in 12 feet (3 mm in 3.6 m). Miter corners accurately and connect securely.
   3. Do not use exposed fasteners, including pop rivets, on moldings and trim.

C. Install suspension system runners so they are square and securely interlocked with one another. Remove and replace dented, bent, or kinked members.

D. Install acoustical panels with undamaged edges and fitted accurately into suspension system runners and edge moldings. Scribe and cut panels at borders and penetrations to provide a neat, precise fit.
   1. Arrange directionally patterned acoustical panels as follows:
      a. As indicated on reflected ceiling plans.
2. Paint cut panel edges remaining exposed after installation; match color of exposed panel surfaces using coating recommended in writing for this purpose by acoustical panel manufacturer.

3. Install hold-down clips in areas indicated, in areas required by authorities having jurisdiction, and for fire-resistance ratings; space as recommended by panel manufacturer's written instructions, unless otherwise indicated or required.

3.04 CLEANING

A. Clean exposed surfaces of acoustical panel ceilings, including trim, edge moldings, and suspension system members. Comply with manufacturer's written instructions for cleaning and touchup of minor finish damage. Remove and replace ceiling components that cannot be successfully cleaned and repaired to permanently eliminate evidence of damage.

END OF SECTION 09 51 13
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Field-finished wood flooring.

B. Related Sections:

1.02 ACTION SUBMITTALS

A. Product Data: For each type of product indicated.

B. Shop Drawings: For each type of floor assembly and accessory. Include plans, elevations, sections, details, and attachments to other work. Include expansion provisions and trim details.

1.03 QUALITY ASSURANCE

A. Manufacturer Qualifications: A qualified manufacturer that is certified for chain of custody by an FSC-accredited certification body.

B. Hardwood Flooring: Comply with NOFMA's "Official Flooring Grading Rules" for species, grade, and cut.
   1. Certification: Provide flooring that carries NOFMA grade stamp on each bundle or piece.

1.04 DELIVERY, STORAGE, AND HANDLING

A. Deliver wood flooring materials in unopened cartons or bundles.

B. Protect wood flooring from exposure to moisture. Do not deliver wood flooring until after concrete, masonry, plaster, ceramic tile, and similar wet work is complete and dry.

C. Store wood flooring materials in a dry, warm, ventilated, weathertight location.

1.05 PROJECT CONDITIONS

A. Conditioning period begins not less than seven days before wood flooring installation, is continuous through installation, and continues not less than seven days after wood flooring installation.

   1. Environmental Conditioning: Maintain an ambient temperature between 65 and 75 deg F (18 and 24 deg C) and relative humidity planned for building occupants in spaces to receive wood flooring during the conditioning period.

   2. Wood Flooring Conditioning: Move wood flooring into spaces where it will be installed, no later than the beginning of the conditioning period.
a. Do not install flooring until it adjusts to relative humidity of, and is at same temperature as, space where it is to be installed.
b. Open sealed packages to allow wood flooring to acclimatize immediately on moving flooring into spaces in which it will be installed.

B. After conditioning period, maintain relative humidity and ambient temperature planned for building occupants.

C. Install factory-finished wood flooring after other finishing operations, including painting, have been completed.

PART 2 - PRODUCTS

2.01 FIELD-FINISHED WOOD FLOORING

A. Solid-Wood Flooring: Kiln dried to 6 to 9 percent maximum moisture content, tongue and groove and end matched, and with backs channeled.
   1. Species and Grade: Select red oak.
   2. Cut: Plain sawn.
   3. Thickness: 3/4 inch (19 mm).
   4. Face Width: 5-1/8 inches (130 mm).
   5. Lengths: Random-length strips complying with applicable grading rules.

B. Urethane Finish System: Complete water-based system of compatible components that is recommended by finish manufacturer for application indicated.
   1. Manufacturers: Subject to compliance with requirements, available manufacturers offering products that may be incorporated into the Work include, but are not limited to, the following:
      a. Basic Coatings, Inc.
      b. BonaKemi USA Inc.
      c. Dura Seal, Sherwin-Williams Company (The).
      d. Hillyard, Inc.
   2. VOC Content: When calculated according to 40 CFR 59, Subpart D (EPA Method 24), as follows:
      a. Finish Coats and Floor Sealers: Not more than 350 g/L.
      b. Stains: Not more than 250 g/L.
   3. Floor Sealer: Pliable, penetrating type.

C. Wood Filler: Compatible with finish system components and recommended by filler and finish manufacturers for use indicated. If required to match approved Samples, provide pigmented filler.

2.02 ACCESSORY MATERIALS

A. Wood Underlayment: As specified in Section 06 16 00 "Sheathing."

B. Vapor Retarder: ASTM D 4397, polyethylene sheet not less than 8.0 mils (0.2 mm) thick.
C. Asphalt-Saturated Felt: ASTM D 4869, Type II.

D. Fasteners: As recommended by manufacturer, but not less than that recommended in NWFA's "Installation Guidelines: Wood Flooring.

E. Thresholds and Saddles: To match wood flooring. Tapered on each side.

F. Reducer Strips: To match wood flooring. 2 inches (51 mm) wide, tapered, and in thickness required to match height of flooring.

G. Cork Expansion Strip: Composition cork strip.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Examine substrates, areas and conditions, with Installer present, for compliance with requirements for maximum moisture content, installation tolerances, and other conditions affecting performance of wood flooring.

B. Proceed with installation only after unsatisfactory conditions have been corrected.

3.02 PREPARATION

A. Broom or vacuum clean substrates to be covered immediately before product installation. After cleaning, examine substrates for moisture, alkaline salts, carbonation, or dust. Proceed with installation only after unsatisfactory conditions have been corrected.

3.03 INSTALLATION

A. Comply with flooring manufacturer's written installation instructions, but not less than applicable recommendations in NWFA's "Installation Guidelines: Wood Flooring.

B. Provide expansion space at walls and other obstructions and terminations of flooring of not less than 3/4 inch (19 mm).

C. Vapor Retarder: Comply with NOFMA's "Installing Hardwood Flooring" for vapor retarder installation and the following:

   1. Wood Flooring Nailed to Wood Subfloor: Install flooring over a layer of asphalt-saturated felt.

D. Solid-Wood Flooring: Blind nail or staple flooring to substrate.

   1. For flooring of face width more than 3 inches (75 mm):

      a. Install countersunk screws at each end of each piece in addition to blind nailing. Cover screw heads with wood plugs glued flush with flooring.

3.04 FIELD FINISHING

A. Machine-sand flooring to remove offsets, ridges, cups, and sanding-machine marks that would be noticeable after finishing. Vacuum and tack with a clean cloth immediately before applying finish.
1. Comply with applicable recommendations in NWFA's "Installation Guidelines: Wood Flooring."

B. Fill open-grained hardwood.

C. Fill and repair wood flooring seams and defects.

D. Apply floor-finish materials in number of coats recommended by finish manufacturer for application indicated, but not less than one coat of floor sealer and three finish coats.

   1. Apply stains to achieve an even color distribution matching approved Samples.
   2. For water-based finishes, use finishing methods recommended by finish manufacturer to minimize grain raise.

E. Cover wood flooring before finishing.

F. Do not cover wood flooring after finishing until finish reaches full cure, and not before seven days after applying last finish coat.

END OF SECTION 09 64 00
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Resilient tile flooring and accessories.

1.02 SUBMITTALS

A. Product Data: Provide detailed data on each product to be used including but not limited to the following information as applicable:
   1. Preparation instructions and recommendations.
   2. Storage and handling requirements and recommendations.
   3. Installation methods.

B. Selection Samples: For each finish product specified, two sets of each type, colors and finish of resilient flooring and accessory required, indicating full range of color and pattern variation.

1.03 DELIVERY, STORAGE, AND HANDLING

A. Store products in manufacturer’s unopened packaging until ready for installation.

B. Flooring material and adhesive shall be acclimated to the installation area for a minimum of 48 hours prior to installation.

C. Store cartons of tile products flat and squarely on top of one another, not on edge.

1.04 PROJECT CONDITIONS

A. Environmental Requirements/Conditions: In accordance with manufacturer's recommendations. Areas to receive flooring shall be clean, fully enclosed, weather tight with the permanent HVAC set at a uniform temperature of at least 65 degrees F (18 degrees C) and less than 85 degrees (30 degrees C) 48 hours prior to and during and for not less than 48 hours after installation. The flooring material shall be conditioned in the same manner prior to installation.

B. Close spaces to traffic during resilient flooring installation and for a period of time after installation as recommended in writing by the manufacturer.

C. Install resilient flooring materials and accessories after other finishing operations, including painting, have been completed.

D. Where demountable partitions and other items are indicated for installation on top of sheet resilient flooring material, install flooring material before these items are to be installed.

E. WARRANTY
F. Warranty Period: Manufacturer's standard warranty against manufacturing defects and wearing for flooring and as follows:
   1. Van Gogh Range:
      a. 10 year commercial warranty.
      b. 15 year residential warranty.

1.05 EXTRA MATERIALS

A. Deliver to Owner extra materials from same production run as products installed. Package products with protective covering and identify with descriptive labels. Comply with Division 1 closeout submittals requirements.
   1. Quantity: Furnish quantity of flooring units equal to 2 percent of amount installed. Karndean Delivery, Storage and Protection: Comply with Owner's requirements for delivery, storage and protection of extra materials.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturer: Karndean Design Flooring, which is located at: 1100 Pontiac Court; Export, PA 15632; Toll Free Tel: 888-266-4343; Fax: 800-887-7043; Email: request info (michael.lang@karndean.com); Web: www.karndean.com

B. Requests for substitutions will be considered in accordance with provisions of Section 01600.

2.02 RESILIENT TILE FLOORING

A. Resilient Tile Flooring: Knight Tile Range Planks by Karndean Design Flooring.
   1. Dimensions: 36 inches by 4 inches (915 mm by 102 mm).
   4. Wear Layer Thickness: 12 mil (0.3 mm).
   5. Tile Thickness: 2 mm.
   7. Item Number and Name:
      a. KP32 Sycamore.

   1. Dimensions: 48 inches by 7 inches (1219 mm by 178 mm).
   4. Wear Layer Thickness: 20 mil (0.5 mm).
   5. Tile Thickness: 3 mm.
   7. Item Number and Name:
      a. VGW33 Copper Gum.
2.03 ACCESSORIES

A. Karndean Floor Care Kit with cleaning and maintenance products in quantities appropriate to size and scope of resilient flooring application are available but not required.

B. Adhesive: Manufacturer's recommended adhesive as follows.
      a. Provide manufacturer's recommended concrete floor sealer for high moisture applications.
   2. Karndean KNA 332 acrylic "wet set" adhesive.
      a. Provide manufacturer's recommended concrete floor sealer for high moisture applications.
      a. Provide manufacturer's recommended concrete floor sealer for high moisture applications.

C. Portland based cementitious base leveler. Gypsum based not acceptable.

D. Manufacturer approved substrate board.

PART 3 - EXECUTION

3.01 EXAMINATION

A. Inspect floor to be installed immediately upon arriving at job site; perform a moisture test.

B. Do not begin installation until substrates have been properly prepared.

C. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.

D. The installation of the resilient flooring shall not begin until the work of all other trades has been completed, particularly wet and overhead trades.

E. Areas to receive flooring shall be adequately lighted during all phases of the installation process.

3.02 PREPARATION

A. Clean surfaces thoroughly prior to installation.

B. Using Portland based cementitious base leveler fill and cover all seams, nail heads, voids, cracks, and expansion joints. Achieve smooth, even, firmly attached substrate for best finish results. Gypsum based underlayment not acceptable with Karndean Luxury Vinyl Flooring unless it is first properly prepared.
   1. Encapsulate the gypsum with a premium latex primer/sealer.
   2. Float with a Portland cement compound using a latex additive (as recommended by the manufacturer) instead of water.
   3. Once substrate levelness is achieved continue with the next step.

C. Apply concrete floor sealer to substrate in accordance with manufacturer's recommendations.
D. Prepare surfaces using the methods recommended by the manufacturer for achieving the best result for the substrate under the project conditions.

E. INSTALLING RESILIENT TILES AND PLANKS

F. General:
1. Karndean does not mandate any one brand of resilient flooring underlayment. Permanent HVAC system shall be turned on and set to a minimum of 65 degrees F (20 degrees C) for a minimum of 48 hours prior to, during and 48 hours after installation. After the installations, the maximum temperature should not exceed 125 degrees F (37 degrees C).
2. All products must be allowed to acclimate at least 24 to 48 hours before installation. This means product must be placed in the same room as the install that is taking place and removed from its factory packaging.
3. Material shall be visually inspected prior to installation.
4. Install in accordance with manufacturer's installation instructions for each product type and application specified.

G. Layout and Installation:
1. In order to achieve a random natural wood look, take planks and cut nominal lengths to be used on the first course; example: 10 inches (254 mm), 40 inches (1016 mm), 15 inches (381 mm), 25 inches (635 mm), 8 inches (203 mm). At the end of the first course, all cut planks remaining should be used on the next course. Position planks so the end seams are no closer than the width of the plank being installed. Maintain this approach to staggering the planks throughout the entire installation.
2. Center tiles or planks in rooms and hallways so borders are not less than half a tile or plank when possible.
3. Cut edges shall always be installed against a wall.
4. Install using tile and plank installation techniques recommended by manufacturer.
5. Install tiles, planks, borders and feature strips in locations and configurations indicated on the Drawings.

H. Adhesive Application:
1. Any spread glue has to be covered with material and rolled within the recommended time frame described on the adhesive container.
2. If troweled adhesive skims over, scrape up and reapply.
3. Install in accordance with adhesive manufacturer's recommendations.

3.03 CLEANING

A. Wipe off any adhesive on floor as installation proceeds. Wait 48 hours before applying the cleaning and maintenance products.

B. Prior to installation of permanent fixtures or furniture, remove all dirt, debris, or residual adhesive and clean the floor. If desired, a protective coating may be applied at this time. Specific products and instructions are available from the manufacturer.

3.04 PROTECTION

A. Protect installed products until completion of project.

B. Touch-up, repair or replace damaged products before Substantial Completion.
3.05 MAINTENANCE

A. Comply with manufacturer’s instructions for proper cleaning and maintenance of the products.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals:
   1. Product Data. Include printout of MPI's "MPI Approved Products List" with product highlighted.
   2. Samples.

B. Mockups: Full-coat finish Sample of each type of coating, color, and substrate, applied where directed.

C. Extra Materials: Deliver to Owner 1 gal. of each color and type of finish coat paint used on Project, in containers, properly labeled and sealed.

D. Compliance:
   1. Interior paints and coatings shall comply with the following limits for VOC content:
      a. Flat Paints and Coatings: 50 g/L.
      b. Nonflat Paints, Coatings: 50 g/L.
      c. Primers, Sealers, and Undercoaters: 100 g/L.
      d. Pretreatment Wash Primers: 300 g/L.

PART 2 - PRODUCTS

2.01 PAINT

A. Primer
   1. Benjamin Moore & Co. Classic Colors Eco-Spec® WB
   2. Paint Line: Primer N372

B. Wall and Ceiling Paint
   1. Benjamin Moore & Co. Classic Colors Eco-Spec® WB
   2. Paint Line: Flat Finish N373
   3. Color: "Cream Froth" No. 2158-70
   4. Description: off-white, premium-quality, odorless, zero-VOC paint.

C. Interior Wood Door Paint
   1. Benjamin Moore & Co. Classic Colors Eco-Spec® WB
   2. Paint Line: Flat Finish N373
   4. Description: off-white, premium-quality, odorless, zero-VOC paint.

D. Accent Wall Paint
   1. Benjamin Moore & Co. Classic Colors Eco-Spec® WB
   2. Paint Line: Flat Finish N373
   3. Color: “Blue Heather” No. 1620 or “Amsterdam” AF-550
   4. Description: off-white, premium-quality, odorless, zero-VOC paint.
E. MPI Standards: Provide materials that comply with MPI standards indicated and listed in its "MPI Approved Products List."

F. Material Compatibility: Provide materials that are compatible with one another and with substrates.

PART 3 - EXECUTION

3.01 PREPARATION

A. Comply with recommendations in MPI's "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

B. Remove hardware, lighting fixtures, and similar items that are not to be painted. Mask items that cannot be removed. Reinstall items in each area after painting is complete.

C. Clean and prepare surfaces in an area before beginning painting in that area. Schedule painting so cleaning operations will not damage newly painted surfaces.

3.02 APPLICATION

A. Comply with recommendations in MPI's "MPI Architectural Painting Specification Manual" applicable to substrates indicated.

B. Paint exposed surfaces unless otherwise indicated.
   1. Paint surfaces behind movable equipment and furniture same as similar exposed surfaces.
   2. Paint surfaces behind permanently fixed equipment or furniture with prime coat only.
   3. Paint the back side of access panels.
   5. Do not paint prefinished items, items with an integral finish, operating parts, and labels unless otherwise indicated.

C. Apply paints according to manufacturer's written instructions.
   1. Use brushes only for exterior painting and where the use of other applicators is not practical.
   2. Use rollers for finish coat on interior walls and ceilings.

D. Apply paints to produce surface films without cloudiness, spotting, holidays, laps, brush marks, roller tracking, runs, sags, ropiness, or other surface imperfections. Cut in sharp lines and color breaks.
   1. If undercoats or other conditions show through topcoat, apply additional coats until cured film has a uniform paint finish, color, and appearance.

END OF SECTION 099123
PART 1 - GENERAL

1.01 SECTION INCLUDES

A. Submittal: Product Data, Selection Samples, Verification Samples.

B. Quality Assurance
   1. Installer qualifications: A firm or individual experienced in applying paints and coatings similar in material, design, and extent to those indicated for this Project, whose work has resulted in applications with a record of successful in-service performance.
   2. Mock-Up: Provide a mock-up for evaluation of surface preparation techniques and application workmanship. Provide samples that designate primer and finish coats.

C. Project Conditions
   1. Maintain environmental conditions (temperature, humidity, and ventilation) within limits recommended by manufacturer for optimum results. Do not install products under environmental conditions outside manufacturer's absolute limits.

D. Extra Materials
   1. Furnish one percent of each material and color to the Owner, but not less than 1 gal or 1 case, as appropriate.

PART 2 - PRODUCTS

2.01 STAINS

A. Siding & Decking Stain
   1. Materials: wood siding (western red cedar), railings (western red cedar), and decking and deck skirts (western red cedar)
   2. Manufacturer: Sikkins
   3. Stain: Cetol Water based SRD translucent wood finish
      a. Finish: Clear, No. SIK77000
      b. Color: Cedar, No.77
      c. Coats: 1
      d. Description: contains an optimal amount of translucent iron oxide pigments and UV light stabilizers

PART 3 - EXECUTION

3.01 EXAMINATION

A. Do not begin installation until substrates have been properly prepared; notify Architect of unsatisfactory conditions before proceeding. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
B. Proceed with work only after conditions have been corrected and approved by all parties, otherwise application of coatings will be considered as an acceptance of surface conditions.

3.02 SURFACE PREPARATION

A. General: Surfaces shall be dry and in sound condition. Remove oil, dust, dirt, loose rust, peeling paint or other contamination to ensure good adhesion.

3.03 INSTALLATION

A. Apply all coatings and materials with manufacture specifications in mind. Mix and thin coatings according to manufacturer's recommendations.

B. Do not apply to wet or damp surfaces.

C. Apply coatings using methods recommended by manufacturer.

D. Uniformly apply coatings without runs, drips, or sags, without brush marks, and with consistent sheen.

E. The coated surface must be inspected and approved by the Architect immediately prior to each coat.

3.04 PROTECTION

A. Protect finished coatings from damage until completion of project.

B. Touch-up damaged coatings after substantial completion, following manufacturer's recommendation for touch up or repair of damaged coatings. Repair any defects that will hinder the performance of the coatings.

END OF SECTION 09 93 13
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data.

PART 2 - PRODUCTS

2.01 TOILET TISSUE DISPENSER
   A. Toto Soiree Toilet Paper Holder
      1. Model No: YP960#CP
      2. Type: Single-roll dispenser
      3. Mounting: Surface mounted with concealed anchorage
      4. Material/Finish: Polished Chrome

2.02 MIRROR UNIT
   A. Pegasus Jameson 20 in. x 26 in. Rectangular Mirror
      1. Frame: Brushed nickel, adjustable tilt
      2. Manufacturer Model #: 130-26-121-25
      3. Manufacturer Part #: 130-26-121-25

2.03 ROBE HOOK
   A. Toto Soiree Robe Hook
      1. Model No: YH960#CP
      2. Material/Finish: Polished Chrome

2.04 TOWEL BAR
   A. Toto Soiree Towel Bar
      1. Model No: YB960#CP
      2. Material/Finish: Polished Chrome
      4. Install Length: 25.4 inches

PART 3 - EXECUTION

3.01 INSTALLATION
   A. Install accessories using fasteners appropriate to substrate indicated and recommended by unit manufacturer. Install units level, plumb, and firmly anchored in locations and at heights indicated in drawings.
      1. Install grab bars to withstand a downward load of at least 250 lbf (1112 N), when tested according to method in ASTM F 446.
B. Adjust accessories for unencumbered, smooth operation and verify that mechanisms function properly. Replace damaged or defective items. Remove temporary labels and protective coatings.

C. Repair, refinish, or replace finishes damaged during installation or transit, as directed by Architect.

END OF SECTION 10 28 16
PART 1 - GENERAL

1.01 RELATED DOCUMENTS

A. Drawings and general provisions of the Contract, including General and Supplementary Conditions and Division 01 Specifications Sections, apply to this Section.

1.02 SUMMARY

A. Provide wire type shelving systems complete.

B. Related requirements specified elsewhere include structural backing in walls – Division 06 Section, Rough Carpentry, or Division 09 Section, Gypsum Board Assemblies.

1.03 QUALITY ASSURANCE

A. Reference Standards: Manufacturer's specifications and recommendations.

B. Manufacturer
   2. Lee/Rowan Company.
   4. Approved equal.

1.04 SUBMITTALS

A. Catalogue data.

PART 2 - PRODUCTS

2.01 MATERIALS

A. Storage Units: Clairson "Closet Maid" vinyl-coated, or Lee/Rowan epoxy-coated, or Schulte epoxy-coated, steel rod assemblies, colors as selected.

B. Ancillary Materials: Manufacturer's standard interconnecting hardware, anchor clips, and brackets as required. Provide self-tapping screws, lengths as required to anchor into wood backing.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install with screws into wall framing and blocking (drywall anchors are not acceptable).

B. Components shall be level, in alignment and securely anchored.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data.

B. Comply with NFPA 70, "National Electrical Code."

PART 2 - PRODUCTS

2.01 CEILING FAN

A. Modern Fan Company
   1. Product Name: Lapa
   2. Finish: Bright Nickel
   3. Blade length: 42”
   4. Blade color: Nickel
   5. No light

2.02 ACCESSORIES

A. Downrod
   1. Use appropriate length downrod to have blade height at 8'-0” above finished floor.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install as per manufacturer’s instructions.

END OF SECTION 11 30 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data.

PART 2 - PRODUCTS

2.01 RESIDENTIAL APPLIANCES

A. Regulatory Requirements: Comply with the following:
   1. NFPA: Provide electrical appliances listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

B. Accessibility: Where residential appliances are indicated to comply with accessibility requirements, comply with ICC A117.1.

C. Electric Cooktop: 30-inch, built-in cooktop with four burner elements.
   1. Manufacturers: LG
   2. Product Number: LCE30845
   3. Dimensions: 21 ½” x 2 3/16” x 30 3/16”
   4. Finish: Stainless Steel

D. Electric Wall Oven: Built-in, single, electric, self-cleaning wall oven with broiler unit.
   1. Manufacturers: LG
   2. Product Number: LWS3030ST
   3. Dimensions: 24 3/8” x 29 5/16” x 29 ¾”
   4. Finish: Stainless Steel

E. Microwave Oven: Built-in microwave oven, 1.6-cu. ft capacity, 1000 W.
   1. Manufacturers: LG
   2. Product Number: LMV1683
   3. Dimensions: 15 11/16” x 16 7/16” x 29 15/16”
   4. Finish: Stainless Steel

F. Exhaust Hood: 36-inch, suspended-island-canopy exhaust hood with three-speed automatic fan.
   1. Manufacturers: Kitchen Aid
   2. Product Number: KXI2536YSS
   3. Dimensions: 27” x 36” x 51”
   4. Finish: Stainless Steel

G. Refrigerator/Freezer: Freestanding, two-door refrigerator with top-mounted freezer, interior cabinet liners.
   1. Manufacturers: LG
   2. Product Number: LTC19340
3. Color: Stainless Steel
5. Freezer Compartment Volume: 5.4 cu. Ft.
6. Shelf Area: 2 adjustable glass shelves.
7. Energy Performance: Provide appliances that qualify for the EPA/DOE ENERGY STAR product labeling program.

H. Dishwasher: Built-in, under counter, automatic dishwasher, sized to replace 24-inch base cabinet, 7 wash cycles with hot-air and heat-off drying cycles.
   1. Manufacturers: LG
   2. Product Number: LDF8072ST
   3. Color: Stainless Steel
   4. Energy Performance: Provide appliances that qualify for the EPA/DOE ENERGY STAR product labeling program.

I. Clothes Washer: Freestanding, Front-loading, automatic clothes washer with 3.6-cu. ft. capacity stainless-steel tub and 9 wash cycles including regular.
   1. Manufacturers: LG
   2. Product Number: WM2655HVA
   3. Color: Stainless Steel
   4. Energy Performance: Provide appliances that qualify for the EPA/DOE ENERGY STAR product labeling program.

J. Electric Clothes Dryer: Freestanding, front-loading clothes dryer, 7.3-cu. ft. capacity with stainless-steel interior.
   1. Manufacturers: LG
   2. Product Number: DLEX2655V
   3. Color: Stainless Steel

PART 3 - EXECUTION

3.01 INSTALLATION

A. Built-in Appliances: Securely anchor to supporting cabinetry or countertops with concealed fasteners. Verify that clearances are adequate for proper functioning and rough openings are completely concealed.

B. Freestanding Appliances: Place in final locations after finishes have been completed in each area. Verify that clearances are adequate to properly operate equipment.

C. Test each item of residential appliances to verify proper operation. Make necessary adjustments.

D. Verify that accessories required have been furnished and installed.

END OF SECTION 11 31 00
PART I - GENERAL

1.01 DESCRIPTION OF WORK
   A. All polyethylene casework shall be furnished, installed and shall be demonstrated to
      properly perform in accordance with the specifications stated herein.

1.02 PRODUCTS
   A. Polyethylene Casework of a Stock or Custom Design.

1.03 RELATED SECTIONS
   A. Section “Rough Carpentry” for wood blocking to anchor manufactured polyethylene
      casework.
   B. Section “Solid Surface Fabrications” for countertops, including backsplash.

1.04 PRODUCT HANDLING
   A. Schedule delivery of polyethylene casework after installation area is sufficiently complete to
      allow for immediate installation.
   B. Protect finished surfaces from soiling or damage during handling and installation with a
      protective covering.

1.05 SUBMITTALS
   A. Product Data: Manufacturer's data and installation instructions on each item of casework
      to be used. Include component dimensions and configurations, construction details,
      description of joinery, preparation and installation instructions and maintenance
      recommendations.
   B. Shop Drawings: Include plans, elevations, sections, details, and attachments to other work.
      Show fabrication details, including types and locations of hardware. Show installation
      details, including filler panels. If available, indicate manufacturer's catalog numbers for
      casework.
   C. Samples: Submit samples of polyethylene panel material and the full range of colors
      available.

1.06 REFERENCES
   A. Comply with all applicable trade standards, ordinances, building codes and regulations and
      those standards and references listed (where applicable).
   B. Approval for Food-Safe Contact from the Food and Drug Administration (FDA).
C. Meet or exceed standards established by American Nat’l Stand. Institute/Business & Institutional Furniture Mfr. Assoc. (ANSI/BIFMA) for casework, X5.9-2004 – Storage Units.

D. Adjustable to ADA Height Requirements of 33-1/2”.

1.07 WARRANTY

A. Polyethylene casework and hardware shall be warrantied for a period three (3) years, from the date of delivery by Manufacturer, and shall cover only defects in material and/or workmanship.

B. Defects reported to Manufacturer in writing prior to the expiration of the warranty period shall be repaired or replaced at Manufacturer’s option.

PART 2 - PRODUCTS

2.01 MANUFACTURERS

A. Acceptable Manufacturer. Wer/Ever Products, Inc., 3900 South 50th Street, Tampa, Florida 33619, (888) 324-3837, www.werever.com. All polyethylene casework shall be the product of one manufacturer and shall be fabricated at one geographic location to ensure product consistency, shipping continuity, and single-source responsibility.

B. Products of other polyethylene casework manufacturers may be used as an approved equal provided they meet the product characteristics specified herein. No known equal exists.

2.02 MATERIALS, GENERAL

A. Materials:
   1. Casework.
      a. Casework bodies, drawer heads, drawer bodies, drawer guides, shelves, and door assemblies shall be fabricated from marine grade high density polyethylene (HDPE) that contains a UV inhibitor, and is FDA approved for food-safe contact.
      b. Colors shall be chosen by the Architect from the full range of standard colors available from the manufacturer.
      c. Door and drawer styles shall be chosen by the Architect from the full range of standard door and drawer styles available from the manufacturer.
   2. Casework Hardware
      a. Doors shall be equipped with 304 stainless steel 110 degree self-closing hinges securely fastened to doors and casework with stainless steel screws.
      b. Door and drawer pulls shall be made of stainless steel, securely fastened to doors and drawers with screws (if applicable).
      c. Casework and extendible elements may contain stainless steel screws and or nails for non-support purposes.
      d. Casework shall be equipped with plastic cabinet legs adjustable from 3 3/4” to 5 ¾” with a load capacity of not less than 250 pounds per leg.
      e. Shelving height shall be adjustable, but shelf pins shall secure the shelf in place using corrosive resistant pins.
2.03 CASEWORK FABRICATION.

A. Polyethylene Material: All polyethylene casework shall be constructed using polyethylene sheets with the following thicknesses:
1. Side panels shall be cut from ¼” solid HDPE.
2. Floor panel shall be cut from ¼” solid HDPE.
3. Back panel shall be cut from ½” solid HDPE.
4. Drawer face shall be cut from ¼” solid HDPE.
5. Drawer box front, sides, back and bottom shall be cut from ½” solid HDPE.
6. Door panels shall be cut from ¼” solid HDPE.
7. Shelves shall be cut from ¼” solid HDPE.
8. Top spreaders shall be constructed of ¾” solid HDPE.
9. Drawer guides shall be constructed of ½” solid HDPE.

B. Casework Assembly: Polyethylene casework shall be cut and assembled without any supporting metal or hardware. All casework cuts shall be made using a computer numerical control (CNC) machine, to ensure precision cutting for consistent quality and rigidity of completed casework, and shall be assembled as follows:
1. Each polyethylene panel shall be cut with channels that will allow all polyethylene panels to slide snugly together and lock in place.
2. Interior side panels of base and wall casework shall be pre-drilled using a CNC machine, except where otherwise indicated, for uniform attachment of adjacent casework.
3. Adjustable shelves shall have a mechanism for securing the shelves from moving, using non-metal corrosive-resistant pins.
4. Drawer faces shall be attached to the face of a drawer box to provide for additional strength to the drawer.
5. Drawer slides shall be made from a non-metal corrosive resistant material.
6. Door panels shall be attached to side panels using not less than three (3) 304 stainless steel 110 degree self-closing hinges.
7. Top spreaders shall be designed to enable use of a countertop adhesive to adhere the countertop to the casework.
8. Casework adjustable leg bases shall be attached from the underside of the bottom panels using four (4) stainless steel screws.

C. Performance Requirements: All polyethylene casework shall meet the following MINIMUM standards:
1. Casework body shall be waterproof;
2. Casework shall be UV stabilized for direct sun exposure;
3. Casework shall be manufactured from solid color material;
4. Casework shall be FDA approved for food-safe contact;
5. Casework material shall be rated as not less than a Class C under ASTM E-84;

PART 3 - EXECUTION

3.01 INSTALLATION

A. Do not begin installation until substrates have been properly prepared.

B. If substrate preparation is the responsibility of another installer, notify Architect of unsatisfactory preparation before proceeding.
3.02 COORDINATION

A. Coordination with appropriate contractors, who shall furnish plumbing and electrical services which shall be passing through the casework.

3.03 INSTALLATION OF CASEWORK.

A. All exterior surface protective covering shall be left in place and removed only when the casework is ready for installation and only on surfaces that will be concealed during installation.

B. Set casework components plumb, square, and straight with no distortion. Adjust leveling legs as needed. Where casework abuts other finished work, apply filler panels and scribe for accurate fit with fasteners concealed where practical.

C. Set all base casework straight, level, and plumb. Adjust subtops within 1/4 inch of a single plane. Fasten casework to masonry or framing, wood blocking, or reinforcements in walls and partitions with fasteners. Bolt adjacent casework together with joints flush, tight, and uniform. Align similar adjoining doors and drawers to a tolerance of 1/16 inch.

D. Install hardware uniformly and precisely. Adjust and align hardware so moving parts operate freely and contact points meet accurately. Allow for final adjustment after installation.

E. Adjust casework and hardware so doors and drawers operate smoothly without warp or bind. Lubricate operating hardware as recommended by manufacturer.

3.04 CLEANING AND PROTECTING.

A. Repair, or remove and replace, defective work as directed upon completion of installation.

B. Clean finished surfaces to match original factory finish, as approved by Architect.

END OF SECTION 12 34 00
PART 1 - GENERAL

1.01 SUMMARY

A. Section Includes:
   1. Quartz agglomerate countertops.

1.02 SUBMITTALS

A. Product Data: For countertop materials.

B. Shop Drawings: For countertops. Show materials, finishes, edge and backsplash profiles, methods of joining, and cutouts for plumbing fixtures.

1.03 WARRANTY

A. Special Warranty: Manufacturer's standard form in which manufacturer agrees to repair or replace simulated stone countertops that fail in materials or workmanship within specified warranty period.

   1. Warranty shall also include installation and finishing that may be required due to repair or replacement of defective simulated stone countertops.

   2. Warranty Period: 10 years from date of Substantial Completion.

PART 2 - PRODUCTS

2.01 QUARTZ AGGLOMERATE COUNTERTOPS

A. Configuration: Provide countertops with the following front and backsplash style:

   1. Front: Straight, slightly eased at top.

   2. Backsplash: Straight, slightly eased at corner.

B. Countertops: 1/2-inch- (12.7-mm-) thick, quartz agglomerate with front edge built up with same material.

C. Backsplashes: 1/2-inch- (12.7-mm-) thick, quartz agglomerate.

D. Fabrication: Fabricate tops in one piece with shop-applied edges and backsplashes unless otherwise indicated. Comply with quartz agglomerate manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.

E. Fabricate countertops without joints.

2.02 COUNTERTOP MATERIALS

A. Certified Wood Materials: Fabricate countertops with wood and wood-based products produced from wood obtained from forests certified by an FSC-accredited certification.
body to comply with FSC STD-01-001, "FSC Principles and Criteria for Forest Stewardship."

B. Adhesives: Adhesives shall contain no added urea formaldehyde.
   1. Stone Adhesive: Manufacturer's recommended adhesive, formulated specifically for bonding simulated stone to simulated stone with a VOC content of 65 g/L or less.

C. Quartz Agglomerate: Solid sheets consisting of quartz aggregates bound together with a matrix of filled plastic resin and complying with the "Physical Characteristics of Materials" Article of ANSI SS1.
   1. Manufacturers: Subject to compliance with requirements, provide products by one of the following:
      a. Caesarstone.
      b. Cambria.
      c. Cosentino USA.
      d. E. I. du Pont de Nemours and Company.
      e. LG Chemical, Ltd.
      f. Samsung Chemical USA, Inc.
      g. Technistone USA, Inc.
      h. Transolid, Inc.

PART 3 - EXECUTION

3.01 PREPARATION
   A. Clean surfaces to receive countertops; remove loose and foreign matter that could interfere with adhesion.

3.02 INSTALLATION
   A. Install countertops in accordance with manufacturer's written instructions and approved Shop Drawings.
   B. Install countertops level to a tolerance of 1/8 inch in 8 feet (3 mm in 2.4 m), and with a maximum variation in plane between adjacent pieces at joint of plus or minus 1/16 inch.
   C. For quartz agglomerate countertops, fasten by applying continuous bead of adhesive along all base cabinet surfaces, or if underlayment is used, apply continuous bead of adhesive along perimeter and around openings. Align adjacent surfaces and, using adhesive in color to match countertop, form seams to comply with manufacturer's recommended written instructions. Carefully dress joints smooth; remove excess adhesive and sealant, and clean entire surface.
      1. Bond joints with stone adhesive and draw tight as countertops are set. Mask areas of countertops adjacent to joints to prevent adhesive smears.
         a. Fill joints with stone adhesive level with quartz surfacing.
         b. Clamp or brace quartz-agglomerate surfacing in position until adhesive sets.
2. Install backsplashes to comply with manufacturer's written instructions for adhesives, sealers, fabrication, and finishing.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data for valves, sprinklers, specialties, and alarms.
   1. Submit sprinkler system drawings identified as "working plans" and calculations according to NFPA 13. Submit required number of sets to authorities having jurisdiction for review, comment, and approval. Include system hydraulic calculations.
   2. Submit test reports and certificates as described in NFPA 13.

B. Design and Installation Approval: Acceptable to authorities having jurisdiction.

C. Hydraulically design sprinkler systems according to NFPA 13.

D. Comply with NFPA 13D and NFPA 70, and IRC 2009 Section P2904. E. UL listed and labeled and FM-approved pipe and fittings.

E. Verify dimensions in field measurements before fabrication & indicate on shop drawings.

PART 2 - PRODUCTS

2.01 PIPE AND FITTINGS

B. CPVC Plastic Pipe Fittings: ASTM F 438 for NPS 3/4 to NPS 1-1/2 and ASTM F 439 for NPS 2, UL listed, 175-psig rating, for sprinkler service. Include "Listed" and "CPVC Sprinkler Fitting" marks on fittings.

C. Black steel piping shall be provided in all exposed areas.

D. Provide hangers, supports, and seismic restraints with UL listing and FM approval for fire-protection systems.

2.02 VALVES

A. Fire-Protection Service Valves: UL listed and FM approved, with 175-psig non-shock minimum working-pressure rating. Indicating valves shall be butterfly or ball type, bronze body, and integral indicating device with 115-V ac, electric, single-circuit supervisory switch indicator.

2.03 SPRINKLERS

A. Automatic Sprinklers: With heat-responsive element complying with the following:
   1. UL 1626, for residential applications.
B. Sprinkler Types and Categories: Nominal 1/2-inch orifice for "Ordinary" temperature classification rating unless otherwise indicated or required by application.

C. Sprinkler types include the following:
1. Pendant Sprinkler: Viking MI49058 Quick Response Pendant Sprinkler Head
2. Pendant Sprinkler: Viking VK481 Concealed Sidewall Sprinkler Head
3. Pendant Sprinkler: Viking VK480 Ceiling-Recessed Sprinkler Head

D. Sprinkler Escutcheons: steel, one piece, with finish to match sprinklers.

E. Sprinklers shall be low flow residential hidden pendent sprinklers engineered to provide a minimum design density of 0.05 gpm/ft² over the listed coverage area.

F. Sprinkler frame and deflector shall be of bronze frame construction having a ½” NPT thread.

G. Water seal assembly shall consist of a Teflon-coated Belleville spring washer with top-loaded extruded or cold head cup with 3 mm glass bulb containing no plastic parts, and having a temperature rating of 155°F, 165°F or 175°F.

H. Sprinklers shall have a nominal K-factor of as designed in the hydraulic sprinkler design.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Fasten securely in place, with provisions for thermal and structural movement. Install with concealed fasteners, unless otherwise indicated.

B. Correct deficiencies in or remove and reinstall sprinkler that does not comply with requirements.

C. Repair, refinish, or replace sprinklers damaged during installation, as directed by Architect.

D. Adjust operating parts and hardware for smooth, quiet operation and weather tight closure. Lubricate hardware and moving parts.

3.02 PIPE AND FITTING APPLICATION

A. Use steel pipe with threaded, press-seal, roll-grooved, or cut-grooved joints; copper tube with wrought-copper fittings and brazed joints; or CPVC plastic pipe and fittings and metal-to-plastic transition fittings with solvent-cemented joints.

3.03 PIPING INSTALLATION

A. Install "Inspector's Test Connections" in sprinkler piping, complete with shutoff valve.

3.04 TESTING

A. Flush, test, and inspect sprinkler piping systems according to NFPA 13.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Comply with NSF 14 for plastic, potable domestic water piping and components.

B. Comply with NSF 61 for potable domestic water piping and components.

PART 2 - PRODUCTS

2.01 PIPE AND FITTINGS

A. Hard Copper Tubing: ASTM B 88, Type L (ASTM B 88M, Types B and C), water tube, drawn temper with wrought-copper, solder-joint fittings and pro-press fittings.

B. Watts
   1. PEX tubing: ½” type A: Part #: WPTC08 (red) and WPTC08 (blue)
   2. PEX tubing: ¾” type A: Part #: WPTC12
   3. PEX tubing: ¾” type A: Part #: WPTC12

C. Uponor
   1. PEX tubing: 1” type A: Part #: F3061000

   1. PVC Fittings: 1 1/2 ”, ASTM D 2466, Schedule 40, socket type
   2. PVC Fittings: 1 1/4 ”, ASTM D 2466, Schedule 40, socket type
   3. PVC Fittings: 2 ”, ASTM D 2466, Schedule 40, socket type
   4. PVC Fittings: 3 ”, ASTM D 2466, Schedule 40, socket type

E. Transition Fittings: Manufactured piping coupling or specified piping system fitting. Same size as pipes to be joined and pressure rating at least equal to pipes to be joined.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with requirements in Division 22 Section "Common Work Results for Plumbing" for basic piping installation requirements.

B. Install floor penetration system at each service pipe penetration through foundation floor. Make installation watertight. Comply with requirements in Division 22 Section
C. "Common Work Results for Plumbing" for wall penetration systems.

D. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance. Comply with requirements in Division 22 Section "Common Work Results for Plumbing" for pressure gages and Division 22 Section "Domestic Water Piping Specialties" for drain valves and strainers.

E. Install domestic water piping without pitch for horizontal piping and plumb for vertical piping.

F. Rough-in domestic water piping for water-meter installation according to utility company's requirements.

G. Comply with requirements in Division 22 Section "Common Work Results for Plumbing" for basic piping joint construction.
   1. Soldered Joints: Comply with procedures in ASTM B 828 unless otherwise indicated.

H. Comply with requirements in Division 22 Section "Common Work Results for Plumbing" for pipe hanger and support devices.

3.02 INSPECTING AND CLEANING

A. Inspect and test piping systems as follows:
   1. Fill domestic water piping. Check components to determine that they are not air bound and that piping is full of water.
   2. Test for leaks and defects in new piping and parts of existing piping that have been altered, extended, or repaired by visual inspection of all joints.

B. Clean and disinfect potable domestic water piping by filling system with water/chlorine solution with at least 50 ppm (50 mg/L) of chlorine. Isolate with valves and allow to stand for 24 hours. Flush system with clean, potable water until no chlorine is in water coming from system after the standing time by flushing out a volume equal to the system volume, then stopping the flow of water for one hour, and then flushing the system.

3.03 PIPING SCHEDULE

A. Aboveground Distribution Piping: PEX piping

B. Mechanical Room Piping: Copper pipe and PEX piping

3.04 VALVE SCHEDULE

A. Drawings indicate valve types to be used.

B. Where specific valve types are not indicated, the following requirements apply:
   1. Shutoff Duty: Use bronze ball valve
   2. Throttling Duty: Use bronze ball valve
   3. Drain Duty: Hose-end drain valves

C. Install ball valves on inlet to each plumbing equipment item, on each supply to each plumbing fixture not having stops on supplies, and elsewhere as indicated.

D. PVC ball, butterfly, and check valves may be used in matching piping materials.
E. Install drain valve at base of each riser, at low points of horizontal runs, and where required to drain water distribution piping system.

F. Install spring check valve on discharge side of each pump and elsewhere as indicated.

G. Install ball valves in each hot-water circulating loop and discharge side of each pump.

END OF SECTION 22 11 16
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data.

PART 2 - PRODUCTS

2.01 BACKFLOW PREVENTER

A. Watts
   2. Part #: LF600

2.02 BALL VALVES

A. Watts
   1. 3/4” and 1” Ball Valve with full-port, Barbed end connectors, Rated to 400WOG, crimped joint rated at 160 psi at 70 degrees F
   2. Part #: LFWPBV

2.03 WATER CONDITIONER

A. Watts
   1. 1” Connections, rated operating pressure 15-100 psi
   2. Part #: OFRES-0935

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install backflow preventers at each water-supply connection to mechanical equipment and where required by authorities having jurisdiction.

B. Install hose bibs with integral or field-installed vacuum breaker.

END OF SECTION 22 11 19
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data. Include certified performance curves with operating points plotted on curves, operating characteristics, electrical characteristics, and furnished specialties and accessories.

B. Comply with NFPA 70, "National Electrical Code."

C. Comply with UL 778 for motor-operated water pumps.

PART 2 - PRODUCTS

2.01 MAIN PRESSURIZING DOMESTIC WATER PUMP

A. Grundfos
   1. 3/4 Horsepower, 115 Volt
   2. Part #: MQ3-35

2.02 MOTORS

A. NEMA MG 1, “Standard for Motors and Generators.” Include NEMA listing and labeling.

B. Motor Sizes: Minimum size as indicated. If not indicated, large enough so driven load will not require motor to operate in service factor range above 1.0.

C. Controllers, Electrical Devices, and Wiring: Comply with requirements for electrical devices and connections specified in Division 26 Sections.

2.03 CONTROLS

A. Thermostats: Electric; adjustable for control of hot-water circulation pump.
   1. Type: Water-immersion temperature sensor, for installation in piping.
   2. Settings: Pump turned on and off by remotely

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with HI 1.4.

B. Install pumps with access for periodic maintenance, including removal of motors, impellers, couplings, and accessories.

C. Support pumps and piping so weight of piping is not supported by pump volute.
D. Install electrical connections for power, controls, and devices.

E. Connect piping with valves that are at least the same size as piping connecting to pumps.

F. Install suction and discharge pipe sizes equal to or greater than diameter of pump nozzles.

G. Install shutoff valve on suction and discharge side of pumps.

H. Install strainer on suction side of pumps.

I. Install non-slam check valve and throttling valve on discharge side of pumps if pump comes with integral check valve, installation of non-slam check valve is not required.

J. Install thermostats in hot-water return piping.

K. Install test plugs on suction and discharge of each pump. Install at integral pressure gauge tappings where provided.
FACILITY POTABLE-WATER STORAGE TANKS

PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data. Shop Drawings.

PART 2 - PRODUCTS

2.01 EXPANSION TANK

A. Watts
   1. 2.1 gal. capacity, factory pre-charge 20 psi, max P 150 psi, max temp 200 degrees F
   2. Part #: PLT-5

2.02 WATER SUPPLY TANKS

A. Aero Tec Labs Inc
   1. 1300 gallon structurally supported flexible membrane tank, Potable water fabric
      NSF/ANSI 61 standard, 4’ NPT stainless steel opening
   2. Custom fabricated part
   3. Will provide the necessary 250 gallons of water to the fire suppression system

B. Ronco Plastics
   1. 135 gallon polyethylene tank, potable water NSF/ANSI 61 standard, 4’ NPT
      stainless steel opening
   2. Part#: B-300
   3. Will provide supply to green wall

C. Ronco Plastics
   1. 20 gallon polyethylene tank, potable water NSF/ANSI 61 standard, 4’ NPT
      stainless steel opening
   2. Part#: B-233
   3. Will provide supply to condensate misting system

PART 3 - EXECUTION

3.01 INSTALLATION

A. Set units level, plumb, and true to line, without warp or rack of frames and panels and
   anchor securely in place.

B. Fasten securely in place, with provisions for thermal and structural movement. Install
   with concealed fasteners, unless otherwise indicated.
C. Separate dissimilar metals and metal products from contact with wood or cementitious materials, by painting each metal surface in area of contact with a bituminous coating or by other permanent separation.

D. Correct deficiencies in or remove and reinstall products that do not comply with requirements.

E. Repair, refinish, or replace products damaged during installation, as directed by Architect.

F. Adjust operating parts and hardware for smooth, quiet operation.

END OF SECTION 22 12 19
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

PART 2 - PRODUCTS

2.01 PIPES AND FITTINGS

A. A. PVC Pipe
   1. 2” pipe, ASTM D 1785, Schedule 40.
   2. 1-1/2” pipe, ASTM D 1785, Schedule 40.
   3. 3” pipe, ASTM D 1785, Schedule 40.

B. ASTM D 2466, Schedule 40, socket type and npt.

PART 3 - EXECUTION

3.01 PIPING INSTALLATION

A. Install wall penetration system at each pipe penetration through foundation wall. Make installation watertight.

B. Make changes in direction for soil and waste drainage and vent piping using appropriate branches, bends, and long-sweep bends. Sanitary tees and short-sweep 1/4 bends may be used on vertical stacks if change in direction of flow is from horizontal to vertical. Use long-turn, double Y-branch and 1/8-bend fittings if 2 fixtures are installed back to back or side by side with common drain pipe. Straight tees, elbows, and crosses may be used on vent lines. Do not change direction of flow more than 90 degrees. Use proper size of standard increasers and reducers if pipes of different sizes are connected. Reducing size of drainage piping in direction of flow is prohibited.

C. Install soil and waste drainage and vent piping at the following minimum slopes, unless otherwise indicated:
   1. Building Sanitary Drain: 2 percent downward in direction of flow for piping NPS 3 (DN 80) and smaller; 1 percent downward in direction of flow for piping NPS 4 (DN 100) and larger.
   2. Horizontal Sanitary Drainage Piping: 2 percent downward in direction of flow.
   3. Vent Piping: 1 percent down toward vertical fixture vent or toward vent stack.
D. Install PVC soil and waste drainage and vent piping according to ASTM D 2665.

E. Do not enclose, cover, or put piping into operation until it is inspected and approved by authorities having jurisdiction.

3.02 PIPE SCHEDULE

A. Aboveground Applications: PVC plastic, DWV pipe and fittings with solvent-cemented joints

END OF SECTION 22 13 16
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data
   B. Comply with NFPA 70, "National Electrical Code."
   C. Warranty: 6-year limited tank and parts warranty.

PART 2 - PRODUCTS

2.01 66 GALLON HEAT PUMP HOT WATER HEATER
   A. Airgernate
   1. 10,000 BTU heating capacity, 220-240 V, 4kW primary election heater, 2.35 energy factor
   2. 2.75 kW heat pump output
   3. Part #: ATI 66

PART 3 - EXECUTION

3.01 INSTALLATION
   A. Set units level, plumb, and true to line, without warp or rack of frames and panels and anchor securely in place.
   B. Fasten securely in place, with provisions for thermal and structural movement. Install with concealed fasteners, unless otherwise indicated.
   C. Separate dissimilar metals and metal products from contact with wood or cementations materials, by painting each metal surface in area of contact with a bituminous coating or by other permanent separation.
   D. Correct deficiencies in or remove and reinstall products that do not comply with requirements.
   E. Repair, refinish, or replace products damaged during installation, as directed by Architect.
   F. Adjust operating parts and hardware for smooth, quiet operation.

END OF SECTION 22 33 30
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data.
B. Quality Assurance: Labeled with maximum flame-spread index of 25 and maximum smoke-developed index of 50 according to ASTM E 84.

PART 2 - PRODUCTS

2.01 INSULATION MATERIALS

A. Refrigerant Insulation
1. Closed-cell, sponge- or expanded-rubber materials. Comply with ASTM C 534, Type I for tubular materials and Type II for sheet materials.
2. K-Flex USA INSUL-TUBE Coil

B. SHURTAPE HVAC Tape
1. Polypropylene Film

C. Duct Insulation
1. Fiberglass, wrapped duct insulation
2. Suitable for indoor and outdoor use on below ambient services

D. FSK Facing Tape
1. Scrim on polyethylene coated kraft paper

PART 3 - EXECUTION

3.01 INSULATION INSTALLATION

A. Comply with requirements of the Midwest Insulation Contractors Association’s "National Commercial & Industrial Insulation Standards" for insulation installation on pipes and equipment.

B. Insulation Installation at Interior Wall and Partition Penetrations (That Are Not Fire Rated): Install insulation continuously through walls and partitions.
C. Insulation Installation at Fire-Rated Wall, Partition, and Floor Penetrations: Install insulation continuously through penetrations. Seal penetrations. Comply with requirements in Division 07 Section "Penetration Firestopping."

D. Plenums and Ducts Not Insulated:
   1. Metal ducts with duct liner.
   2. Factory-insulated plenums and casings.
   3. Flexible connectors.
   5. Factory-insulated access panels and doors.

E. Piping Not Insulated: Unless otherwise indicated, do not install insulation on the following:
   1. Drainage piping located in crawlspaces.
   2. Chrome-plated pipes and fittings unless there is a potential for injury.

END OF SECTION 23 07 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product data. Shop Drawings.

B. Comply with NFPA 70, "National Electrical Code."

PART 2 - PRODUCTS

2.01 PIPING

A. PEX Tube and Fittings
   1. Comply with: ASTM F 877, SDR 9 PEX tubing and ASTM F 1807, metal insert-type fittings with copper or stainless-steel crimp rings.
   2. Uponor F2060750 PEX-a

B. PEX Tubing
   1. 3/4” type A
   2. Uponor F1060750

2.02 PUMP FOR HEAT EXCHANGER

A. Grundfos
   1. Model MQ 3-35

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with requirements for basic piping installation.

B. Install wall penetration system at each service pipe penetration through exterior wall. Make installation watertight.

C. Install shutoff valve, hose-end drain valve, strainer, pressure gage, and test tee with valve, inside the building at each domestic water service entrance.

D. Install domestic water piping with 0.25 percent slope downward toward drain for horizontal piping and plumb for vertical piping.
E. Install flexible connectors in suction and discharge piping connections to each domestic water pump and in suction and discharge manifold connections to each domestic water booster pump.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

PART 2 - PRODUCTS

2.01 TUBES AND FITTINGS

A. Copper Tube: ASTM B 88, Types K and L (ASTM B 88M, Types A and B) and ASTM B 280, Type ACR.

B. Wrought-Copper Fittings: ASME B16.22.

C. Solder Filler Metals: ASTM B 32. Use 95-5 tin antimony or alloy HB solder to join copper socket fittings on copper pipe.

D. Brazing Filler Metals: AWS A5.8.

2.02 VALVES

A. Thermostatic Expansion Valve: Comply with ARI 750; forged brass or steel body, stainless-steel internal parts, copper tubing filled with refrigerant charge for 46 deg F heating and 71 deg F cooling suction temperature; 102-411 psig working pressure, and 240 deg F operating temperature.

B. Solenoid Valves: Comply with ARI 760; 240 deg F temperature rating, 400-psig (2760-kPa) working pressure, 240 deg F operating temperature; and 24-V normally closed holding coil.

C. Reversing Valve: Max operating temp. 250 deg F, 2500 minimum burst pressure

2.03 REFRIGERANT PIPING SPECIALTIES

A. Filter Drier: Comply with ratings in accordance to ARI standard 710-86, 500 psi maximum working pressure

B. Moisture/Liquid Indicators: 500-psig operating pressure, 240 deg F operating temperature; with replaceable, polished, optical viewing window and color-coded moisture indicator

C. Refrigerant: ASHRAE 34; R-410A.
PART 3 - PART 3 - EXECUTION

3.01 INSTALLATION

A. Install wall penetration system at each pipe penetration through foundation wall. Make installation watertight.

B. Install refrigerant piping and charge with refrigerant according to ASHRAE 15.

C. Belowground, install copper tubing in PVC conduit. Vent conduit outdoors.

D. Insulate suction lines to comply with Division 23 Section "HVAC Insulation."

E. Slope refrigerant piping as follows:
   1. Install horizontal hot-gas discharge piping with a uniform slope downward away from compressor.
   2. Install horizontal suction lines with a uniform slope downward to compressor.
   3. Install traps and double risers to entrain oil in vertical runs.
   4. Liquid lines may be installed level.

F. Install solenoid valves upstream from each thermostatic expansion valve. Install solenoid valves in horizontal lines with coil at top.

G. Install thermostatic expansion valves as close as possible to distributors on evaporator coils.

H. Install moisture/liquid indicators in liquid line at the inlet of the thermostatic expansion valve or at the inlet of the evaporator coil capillary tube.

I. Install strainers upstream from and adjacent to solenoid valves, thermostatic expansion valves, and compressors unless they are furnished as an integral assembly for device being protected:

J. Install piping as short and direct as possible, with a minimum number of joints, elbows, and fittings.

3.02 PIPING APPLICATIONS FOR REFRIGERANT R-410A

A. Suction Lines: Copper, Type L (B), annealed- or drawn-temper tubing and wrought-copper fittings with soldered joints.

END OF SECTION 23 23 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data

PART 2 - PRODUCTS

2.01 REFRIGERANT
   A. R-410A, ASHRAE 34.
      1. Non-ozone depleting refrigerant

PART 3 - EXECUTION

3.01 INSTALLATION
   A. Install refrigerant piping and charge with refrigerant according to ASHRAE 15.

END OF SECTION 23 23 23
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data for fire and smoke dampers and Shop Drawings detailing duct layout and including locations and types of duct accessories, duct sizes, transitions, radius and vaned elbows, special supports details, and inlets and outlet types and locations.

C. Comply with NFPA 96 for ducts connected to commercial kitchen hoods.

D. Comply with UL 181 for ducts and closures.

PART 2 - PRODUCTS

2.01 DUCTS

A. Galvanized-Steel Sheet: ASTM A 653/A 653M, with G60 (Z180) hot- dip galvanized coating.

B. Joint and Seam Tape, and Sealant: Comply with UL 181A.

2.02 ACCESSORIES

A. Volume Dampers and Control Dampers: Single-blade and multiple opposed-blade dampers, standard leakage rating, and suitable for horizontal or vertical applications; factory fabricated and complete with required hardware and accessories.

B. Smoke Dampers: Labeled according to UL 555S by an NRTL. Combination fire and smoke dampers shall also be rated and labeled according to UL 555. Provide factory-fabricated units complete with required hardware and accessories.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install ducts according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" unless otherwise indicated.

B. Seal ducts to the following seal classes according to SMACNA's "HVAC Duct Construction Standards - Metal and Flexible":
   1. Outdoor, Supply-Air Ducts: Seal Class A.
   2. Outdoor, Exhaust Ducts: Seal Class C.
   3. Outdoor, Return-Air Ducts: Seal Class C.
4. Conditioned Space, Supply-Air Ducts in Pressure Classes 2-Inch wg (500 Pa) and Lower: Seal Class C.
5. Conditioned Space, Supply-Air Ducts in Pressure Classes Higher Than 2-Inch wg (500 Pa): Seal Class B.
6. Conditioned Space, Exhaust Ducts: Seal Class B.
7. Conditioned Space, Return-Air Ducts: Seal Class C.

C. Conceal ducts from view in finished and occupied spaces.

D. Avoid passing through electrical equipment spaces and enclosures.

E. Support ducts to comply with SMACNA's "HVAC Duct Construction Standards - Metal and Flexible," Ch. 4, "Hangers and Supports."

F. Install duct accessories according to applicable details in SMACNA's "HVAC Duct Construction Standards - Metal and Flexible" for metal ducts and in NAIMA AH116, "Fibrous Glass Duct Construction Standards," for fibrous-glass ducts.

G. Install volume and control dampers in lined duct with methods to avoid damage to liner and to avoid erosion of duct liner.

H. Clean new duct system(s) before testing, adjusting, and balancing.

3.02 TESTING, ADJUSTING, AND BALANCING

A. Balance airflow within distribution systems, including sub-mains, branches, and terminals to indicated quantities.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data, Shop Drawings, manufacturer's color charts showing the full range of colors available for factory-applied finishes.

B. Comply with NFPA 70, "National Electrical Code."

C. Verify dimensions by field measurements before fabrication and indicate on Shop Drawings.

D. Warranties: Provide standard manufacturer's written warranty, without monetary limitation, signed by manufacturer agreeing to promptly repair or replace products that fail in materials or workmanship for the period of 1 year.

PART 2 - PRODUCTS

2.01 THROUGH-THE-WALL VENTILATION FAN

A. Panasonic
   1. Energy recovery ventilator, servicing the bathroom, 40CFM

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install per manufacturer’s instructions.

END OF SECTION 23 34 13
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data and color charts for factory finishes.

PART 2 - PRODUCTS

2.01 REGISTERS

A. Granger
   1. Material: Steel; Finish: Appliance White; Mounting: Flush.
   2. Sidewall/Ceiling Register Part #: 4MJN1

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install registers.

B. Ceiling-Mounted Outlets and Inlets: Drawings indicate general arrangement of ducts, fittings, and accessories. Make final locations where indicated, as much as practical. For units installed in lay-in ceiling panels, locate units in the center of panel unless otherwise indicated. Where architectural features or other items conflict with installation, notify Architect for a determination of final location.

C. After installation, adjust registers to air patterns indicated, or as directed, before starting air balancing.

END OF SECTION 23 37 13
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data, Shop Drawings.

B. Comply with NFPA 70, "National Electrical Code."

C. Warranties: Provide standard manufacturer’s written warranty, without monetary limitation, signed by manufacturer agreeing to promptly repair or replace products that fail in materials or workmanship for the period of 5 years.

PART 2 - PRODUCTS

2.01 ENERGY RECOVERY VENTILATOR

A. Panasonic

1. Variable speed energy recovery ventilator providing filtration and ventilation, removing particles from both incoming and outgoing air.

2. Panasonic 40 CFM Whisper Comfort Spot

PART 3 - EXECUTION

3.01 INSTALLATION

A. Install unit per Manufacturer’s instructions under supervision of HVAC contractor.

B. Connect and install ducts as described in Section 23 31 13.

END OF SECTION 23 72 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data, Shop Drawings.
   B. Comply with NFPA 70, "National Electrical Code."
   C. Warranties: Provide standard manufacturer’s written warranty, without monetary limitation, signed by manufacturer agreeing to promptly repair or replace products that fail in materials or workmanship for the period of 7 years for compressor, 5 years for parts.

PART 2 - PRODUCTS

2.01 OUTDOOR UNIT
   A. Trane 4TWZ0024A OUTDOOR SPLIT SYSTEM HEAT PUMP
      1. 24,000 BTUH, 19 SEER, Dual-stage heating and cooling

2.02 INDOOR VARIABLE SPEED MODULAR COMMUNICATING AIR HANDLER
   A. Trane TAM8A0A24V21CB Air Handler
      1. Multi-position, variable airflow, independently controlled units
      2. [http://www.mitsubishiclimatization.com/media/336793/m_p_catalog.pdf](http://www.mitsubishiclimatization.com/media/336793/m_p_catalog.pdf)

2.03 INSTALLATION MATERIALS
   A. TAM8A0A24V21CB unit comes with wall-mount installation plates, remote control holder, hardware, and Anti-Allergen and deodorizing filters.
   B. DiversiTech Ultralite Equipment Pad
      1. 32”x37”x2” equipment pad to be placed under outdoor compressor unit. Withstands environmental stresses such as freezing/thawing, UV light, and fire.
      2. DiversiTech UC3237-2
      3. [http://www.diversitech.com/Product?id=01t80000002s8TpaAI](http://www.diversitech.com/Product?id=01t80000002s8TpaAI)

PART 3 - EXECUTION

3.01 INSTALLATION
   A. Installation shall be executed as per installation manuals provided by the Manufacturer.
   B. Set units level, plumb, and true to line, without warp or rack of products and anchor securely in place as described in manufacturer’s specifications.
C. Correct deficiencies in or remove and reinstall units that do not comply with requirements.

D. Repair, refinish, or replace products or finishes damaged during installation or transit, as directed by Architect.

END OF SECTION 23 81 26

2.05 CURRENT MONITORING

A. Brultech Greeneye Monitoring Package
   1. Brultech Greeneye Hub
   2. Brultech Micrco- 40/80/100

2.06 LIGHTING CONTROL

A. INSTEON
   1. 2412N SmartLinc Hub
   2. INSTEON Smart Switches
      a. Refer to 262726: Wiring Devices

PART 3 - EXECUTION

3.01 INSTALLATIONS

A. Prepare substrate by cleaning, removing projections, filling voids, sealing joints, and as otherwise recommended in manufacturer’s written instructions.

B. Network equipment to be installed according to manufacturer’s specifications.

C. Set units level, plumb, and true to line and anchor securely in place.

D. Correct deficiencies in or remove and reinstall materials that do not comply with requirements.

E. Repair, refinish, or replace substrate damaged during installation or transit, as directed by Architect.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

   A. Submittals: Product Data
   
   B. Comply with NFPA 70, "National Electrical Code."

PART 2 - PRODUCTS

2.01 THHN/THWN COPPER WIRE

   A. Southwire
   1. Used for Line Voltage power transfer to electrical device located throughout the house.
   2. Solid and Stranded Copper
   3. AWG: 14/12/10/6/4/2/0

2.02 CAT5E SHIELDED CABLE

   A. CableWholesale
   1. Required to support both network and sensor communications (analog) runs parallel with power lines, up to 1000 ft.
   2. MFG Model #: 56917949

2.03 18/5

   A. Southwire
   1. Required to facilitate analog signal carrying over short distances, up to 500ft of cable MFG Model #: 64169642

PART 3 - EXECUTION

3.01 INSTALLATION

   A. Install according to manufacturer’s specification inside flexible ENT. For an explanation of options and Contractor's product selection procedures, see Section 016000 "Product Requirements."

END OF SECTION 26 05 19

A. Carlon
   1. Electrical Nonmetallic Tubing used as raceway or conduit walls of house
   2. Flex-Plus Blue ENT
   3. www.tnb.com/pub/node/187

2.02 BOXES

A. Carlon
   1. Single, Double, and Four Gang Non Metallic junction box for residential and light commercial use
   2. www.tnb.com/pub/node/187

2.03 METER HOUSING

A. Schneider Square D
   1. QOM2 Meter Socket

PART 3 - EXECUTION

3.01 INSTALLATION

A. Set units level, plumb, and true to line, without warp or rack of frames and panels and anchor securely in place.

B. Fasten raceway and boxes securely in place, with provisions for thermal and structural movement. Install with concealed fasteners, unless otherwise indicated.

C. Repair, refinish, or replace raceway or boxes damaged during installation, as directed by Electrician.

END OF SECTION 26 05 33
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals:
   1. Product Data

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NEMA PB 1.

PART 2 - PRODUCTS

2.01 GENERAL REQUIREMENTS FOR PANELBOARDS

A. Enclosures: Flush and Surface-mounted cabinets; Type 1.
   1. Hinged Front Cover: Entire front trim hinged to box and with standard door within hinged trim cover.

B. Incoming Mains Location: Bottom

C. Phase, Neutral, and Ground Buses: Plated Copper

D. Conductor Connectors: Suitable for use with conductor material and sizes.
   1. Material: Tin-plated copper.
   2. Main and Neutral Lugs: Mechanical Type.

E. Panelboard Short-Circuit Current Rating: Rated for series-connected system with integral overcurrent protective devices and labeled by UL.

2.02 DISTRIBUTION PANELBOARDS

A. Mains: Circuit Breaker

B. Branch Overcurrent Protective Devices: For Circuit-Breaker Frame Sizes 125 A and Smaller: Plug-in circuit breakers

C. Main Service Panel Outside
   1. Service Panel to house main circuit breaker
   2. Schneider Electric QOM2

D. Sub Service Panels
   1. Service panels for house electrical wiring in each module
2. Schneider Electric QO142L225PG
3. MLO, 42 space, Three-Wire

2.03 LIGHTING AND APPLIANCE BRANCH-CIRCUIT PANELBOARDS

A. Mains: Circuit Breaker (Located outside)

B. Branch Overcurrent Protective Devices: Plug-in circuit breakers, replaceable without disturbing adjacent units.

2.04 DISCONNECTING AND OVERCURRENT PROTECTIVE DEVICES

A. Overcurrent Breaker
   1. Protect house electric system from voltage spikes
   2. Schneider Electric QO115, QO120, QO220, QO230, QO240

B. Arc Fault Breaker
   1. Schneider Electric QO115PCAF1, QO120PCAF1

PART 3 - EXECUTION

3.01 INSTALLATION

A. Receive, inspect, handle, store and install panelboards and accessories according to NECA 407 and NEMA PB 1.1.

B. Mount bottom of trim 55 inches above finished floor unless otherwise indicated. C. Arrange conductors into groups; bundle and wrap with wire ties.

C. Create a directory to indicate installed circuit loads and incorporating Owner's final room designations. Obtain approval before installing. Use a computer or typewriter to create directory.

1.01 SECTION REQUIREMENTS

A. Submittals:
   1. Product Data

B. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

C. Comply with NFPA 70.

D. Referring Sections: 2510000 Integrated Automation: Insteon Hub

PART 2 - PRODUCTS

2.01 RECEPTACLES

A. Tamper Resistant Receptacles
   1. Leviton
   2. TBR20-W

B. Duplex GFCI Convenience Receptacles: 125 V, 20 A, straight blade, feed-through type. NEMA WD 1, NEMA WD 6, UL 498, and UL 943, Class A, and include indicator light that is lighted when device is tripped.
   1. Leviton
   2. W7899-TRW

C. USB Charger/ Tamper Resistant Receptacle: UL 498 and all NEC Tamper Resistant Requirements. 2.1 A USB and one 125V, 15 A outlet.
   1. Leviton
   2. TS630-W

2.02 SWITCHES

   1. Leviton 15-amp Decora style rocker switch
   2. 5601-2W

B. Smart Switches
   1. INSTEON
2. 2466SW ToggleLinc Relay (Non-Dimming)
3. 2477S SwitchLinc On/Off

2.03 WALL PLATES

A. Wall Plates, Finished Areas: Smooth, high-impact thermoplastic fastened with metal screws having heads matching plate color.
   1. Leviton
      a. Snap-on single, double, triple gang faceplate
      b. 80301-SW, 80309-SW, 80311-SW

B. Wall Plates, Unfinished Areas: Smooth, high-impact thermoplastic with metal screws.

C. Wall Plates, Damp Locations: Thermoplastic with spring-loaded lift cover, and listed and labeled for use in wet locations.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Comply with NECA 1, including the mounting heights listed in that standard, unless otherwise noted.

B. Install devices and assemblies plumb, level, and square with building lines.

C. When mounting into metal boxes, remove the fiber or plastic washers used to hold device mounting screws in yokes, allowing metal-to-metal contact.

D. Install unshared neutral conductors on line and load side of dimmers.

E. Mount devices flush, with long dimension vertical, and grounding terminal of receptacles on top unless otherwise indicated. Group adjacent devices under single, multigang wall plates.

END OF SECTION 26 27 26
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals:
   1. Product Data

B. Comply with NFPA 70, “National Electrical Code.”

PART 2 - PRODUCTS

2.01 SOLAR SHINGLES

A. Dow Solar
   1. Powerhouse Solar Shingle
   2. Copper Indium Gallium diSelenide with high tempered glass

2.02 INVERTER

A. Dow Powerhouse
   1. Part #: 362590
   2. DC to AC Transformer for up to 3 strings.
   3. Warranty: 10 years

2.03 ACCESSORIES

A. Solar Shingle Mounting-Mounting Screws
   1. McMaster Carr
      a. Required to mount PV modules on roof
      b. Roofing Screws
      c. Product Number: 90694A814
      d. http://www.mcmaster.com/#roofing-screws/=lg7tr6

PART 3 - EXECUTION

3.01 INSTALLATION

A. Prepare substrate by cleaning, removing projections, filling voids, sealing joints, and as otherwise recommended in photovoltaic cell manufacturer’s written instructions. Adjust operating parts and hardware for smooth, quiet operation. Lubricate hardware and moving parts.

B. Set units level, plumb, and true to line, without warp of shingles and anchor securely in place to torque pressures required in manufacturer’s specifications.
C. Make connections between the individual shingles as per manufacturer instructions.

D. Correct deficiencies in or remove and reinstall mountings and modules that do not comply with requirements.

E. Repair, refinish, or replace mountings and modules damaged during installation or transit, as directed by Architect.

F. Wire PV system to the Inverter as per manufacturers instructions.

END OF SECTION 26 32 00

1.01 SECTION REQUIREMENTS

A. Submittals:
   1. Product Data

C. Comply with NFPA 70, “National Electrical Code.”

PART 2 - PRODUCTS

2.01 GENERATOR ASSEMBLY

A. Honda EB10000AH
   1. 120/240 Single-Phase, 60 Hertz Gasoline-powered generator
   2. Maximum AC Output 10000 Watts (41.66A @ 240 V / 833.33A @ 120 V)
   3. Operating Noise 76 db @ rated load.

PART 3 - EXECUTION

3.01 INSTALLATION

A. Set unit level on a stable surface during use. Store in a weather-protected location when not in use.

B. Adjust operating parts and hardware for smooth, quiet operation. Lubricate hardware and moving parts.

END OF SECTION 26 32 00
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data for each luminaire, including lamps.

B. Fixtures, Emergency Lighting Units, Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

D. Coordinate ceiling-mounted luminaires with ceiling construction, mechanical work, and security and fire-prevention features mounted in ceiling space and on ceiling.

PART 2 - PRODUCTS

2.01 LIGHTING FIXTURES AND COMPONENTS, GENERAL REQUIREMENTS

A. Recessed Fixtures: Comply with NEMA LE 4 for ceiling compatibility for recessed fixtures.

B. Fluorescent Fixtures: Comply with UL 1598. Where LER is specified, test according to NEMA Le 5 and NEMA LE 5A as applicable.

C. Exterior Luminaires: Comply with UL 1598 and listed and labeled for installation in wet locations by an NRTL acceptable to authorities having jurisdiction.

D. Comply with IESNA RP-8 for parameters of lateral light distribution patterns indicated for luminaires.

E. Plastic Parts: High resistance to yellowing and other changes due to aging, exposure to heat, and UV radiation.

2.02 REQUIREMENTS FOR INDIVIDUAL LIGHTING FIXTURES

A. Fixture 1: Exterior Surface Mounted Lighting
   1. Basic-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
      a. Lux Space BCS490
   2. Voltage: 120V AC, 35 W
   3. Mounting: Exterior Covering
   4. Lamps: Non-replaceable LED module
   5. External Finish: Sheet metal

B. Fixture 2: Main Room Cove Lighting
   1. Basic-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
      a. Elliptipar F307
2. Voltage: 120V AC, 56W
3. Mounting: Fixture attached to ceiling
4. Nominal Dimensions: 40 9/16”-52 3/8” L x 8 3/4” W x 4” H
5. Lamps: 2 T5 4ft., 112W
6. External Finish: Painted material

C. Fixture 3: Bedroom Ceiling Float
1. Basis-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
   a. Artemide Float L ceiling
2. Voltage: 120V AC, 56W
3. Mounting: Fixture attached to ceiling
4. Nominal Dimensions: 40 9/16”-52 3/8” L x 8 3/4” W x 4” H
5. Lamps: 2 T5 4ft., 56W
6. External Finish: Painted material

D. Fixture 4: Dining Room Pendant
1. Basis-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
   a. YLighting AMC-AT-SPINNING-BH2
2. Voltage: 120V AC, 18W
3. Mounting: Hanging pendant
4. Lamps: CFL, 18W
5. External Finish: Painted Aluminum, white

E. Fixture 5: Kitchen Pendant
1. Basis-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
   a. YLighting AMC-AT-SPINNING-BH1
2. Voltage: 120V AC, 13W
3. Mounting: Hanging pendant
4. Lamps: 2 CFL, 13W
5. External Finish: Painted Aluminum, white

F. Fixture 6: Bathroom Vanity Lighting
1. Basis-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
   a. YLighting TEC-700BCMET
2. Voltage: 120V AC
3. Mounting: Wall mounted
4. Lamps: LED, 20W
5. External Finish: Chrome

G. Fixture 7: Bathroom / Hallway Recessed Lighting
1. Basis-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
   a. Focal Point 3.5” FL3 L3D
2. Voltage: 120V AC
3. Mounting: Recessed ceiling
4. Lamps: 6 LED, 9.5W
5. Trim: CSI EDL-1200; Glass, Round Frost Shower

H. Fixture 8: Mechanical / Laundry Room Lighting
1. Basis-of-Design Product: product indicated in Lighting Schedule or comparable product subject to approval by architect.
   a. Philips VRF 4026
2. Voltage: 120V AC  
3. Mounting: Fixture attached to ceiling  
4. Lamps: 2 T5 4ft, 56W  
5. Trim: CSI EDL-1200; Glass, Round Frost Shower

PART 3 - EXECUTION

3.01 INSTALLATION

A. Set units level, plumb, and square with ceiling and walls, and secure.
B. Terminate appropriate fixtures with corresponding transformer and secure transformer.
C. Wire fixtures to scheduled switch legs.
D. Correct deficiencies in or remove and reinstall mountings and modules that do not comply with requirements.
E. Repair, refinish, or replace mountings and modules damaged during installation or transit, as directed by Architect.

END OF SECTION 26 50 00
PART 1 - GENERAL
1.01 SECTION REQUIREMENTS
   A. Submittals: Product Data and system operating description.
   B. Submittals to Authorities Having Jurisdiction: In addition to distribution requirements for submittals, make an identical submittal to authorities having jurisdiction. To facilitate review, include copies of annotated Contract Drawings as needed to depict component locations.
   C. Comply with NFPA 72.
   D. UL listed and labeled.
   E. Electrical Components, Devices, and Accessories: Listed and labeled as defined in NFPA 70, by a qualified testing agency, and marked for intended location and application.

PART 2 - PRODUCTS
2.01 SMOKE DETECTORS
   A. Kidde KN-COSM-IB AC Wire-in Combination Carbon Monoxide & Smoke Alarm
   B. Sensors: Ionization and Electrochemical
   C. High-Level Chimes: 85 dBA at 10ft
2.02 WIRE AND CABLE
   A. UL listed and labeled as complying with NFPA 70, Article 760.
   B. Solid-copper conductors with 600-V rated, 75 deg C, color-coded insulation. No. 12 AWG or larger as required by local codes.

PART 3 - EXECUTION
3.01 INSTALLATION
   A. Install and test systems according to NFPA 72. Comply with NECA 1.
   B. Install wiring “finished” in concealed spaces and exposed on ceilings and walls where indicated.
   C. Wire system per manufacturer specifications.
PART 1 - GENERAL

1.01 SECTION REQUIREMENTS

A. Submittals: Product Data, plants

B. Warranties: Provide standard manufacturer’s written warranty, without monetary limitation, signed by manufacturer agreeing to promptly repair or replace products that fail in materials or workmanship for the period of 1 year.

PART 2 - PRODUCTS

2.01 VEGETATED ROOFING

A. Roof Membrane: Hot Fluid-Applied Waterproofing as specified in Division 07.

B. Modular Vegetated Roofing, manufactured in 18” x 22” trays. Saturated weight of system to be approximately 22 lbs./sf.
   1. Trays will be made of recycled polyethylene and colored black, gray or clear. Tray dimensions 18 inches wide by 22 inches long and 4 inches deep. Total soil height to be 4 inches.
   2. Growing medium – Sedum carpet laid over extensive growing media.
   3. Recommended plant mixes consisting of highly drought resistant ground covers. Local horticulturalists should be consulted for specific recommendations.
   4. Components are shipped separately and assembled on site.

2.02 ACCESSORIES

A. Growing Medium
   1. Lightweight growing medium specifically designed for use with modular systems. Composed of organic and mineral materials.

PART 3 - EXECUTION

3.01 PREPARATION OF ROOF SURFACE

A. Slip sheet/roof barrier, specified by architect and approved by manufacturer, of 40 mil thickness with overlapped and effectively bonded seams to ward against roof penetration and to keep waterproofing layer safe and clean from soil during installation. Slip sheet/roof barrier typified as follows:
   1. Glued seam types (40 mil thickness)
      a. EPDM, with seams overlapped a minimum of 3 inches and glued with roll out adhesive or double sided tape adhesive of the type that is impervious to and not affected by moisture, and recommended by the manufacturer.
3.02 INSTALLATION

A. Installation season: Module installation to be conducted when plants are:
   1. Properly adapted and acclimatized to local weather conditions.
   2. When weather is above 35 degrees F, there is no ice on the roof and vegetated roof soil is unfrozen.
   3. When plants cover 95 percent or more of soil surface.

B. Install vegetated trays moving from low roof elevation to high roof elevation until desired roof area is covered

END OF SECTION 32 95 13
PART 1 - GENERAL

1.01 INSTALLATION CONTRACTOR
A. Vegetated Wall Panels must be installed by the manufacturer’s authorized installer or local labor under manufacturer’s supervision.

1.02 SUBMITTALS
A. Provide scale drawings showing all material terminations, transitions and penetrations.

1.03 WARRANTIES
A. Provide one (1) year standard warranty on workmanship on the wall system, except for plants.
B. Provide 3-year warranty on all panels, spacers, catch basin, drip pan and brackets (not for 3 years provided it was installed by a manufacturer-certified installer. Components will not degrade due to physical, chemical or biological processes that naturally occur in a green wall system.
C. Provide one (1) year warranty and maintenance contract for vegetation covering all aspects of the vegetation, irrigation and system performance.

PART 2 - PRODUCTS

2.01 DESCRIPTION
A. Provide standard and custom modular panels of vegetation preassembled and ready for installation.
B. System Components for a vertical surface (Exterior or Interior)
   1. Mounting surface suitable for retaining hardware with a minimum 1500 lbs minimum sheer force of 1500 pounds (680 kilograms) as specified by the hardware manufacturer.
   2. Green Wall bracket Spacers 1/2” (minimum) (1.27 cm) to 3/4” (maximum) (1.905cm)
   3. Green wall brackets drilled at a minimum 16” (40.64 cm) on center for hardware.
   5. Soil Provide manufacturer’s standard growing medium.
   6. Plant Material: Provide plants as selected by the Architect from the manufacturer’s full range, and within the weight limits specified.
C. Irrigation Components
   1. Provide edging and flashings, and irrigation accessories.
   2. Provide Irrigation catch basins and drainage
2.02 SUBSTRATE
A. Mounting surfaces shall be acceptable to the wall system manufacturer. Substrates shall meet the structural support requirements as specified by the system manufacturer.

2.03 ACCESSORIES
A. Provide waterproofing membrane in place under the green wall system prior to installation.

2.04 VEGETATION
A. Provide vegetation with root establishment into the green wall cells and substrate, mature enough to provide 90 percent cover upon installation.

2.05 IRRIGATION
A. Provide irrigation designs approved by the manufacturer.
B. Provide an irrigation water source in the vicinity of the green wall with a shut-off valve and backflow prevention. Provide for grey water or rainwater irrigation water where possible.

2.06 EDGING DETAILS
A. Provide manufacturer’s approved edging anchored under and over the green wall panel. Provide edge details with manufacturer’s powder coating in color to be selected by the Architect.

PART 3 - EXECUTION

3.01 DELIVERY
A. Deliver pre-grown panels on manufacturer’s approved panel carrier. Pre-grown sedum may be palletized. All other varieties will not be stacked or transported in such a way as to crush the plants while in transit.

3.02 STORAGE
A. If the outside temperature is above 77°F (25°C) the modules must be installed within one (1) day after being palletized to prevent damage to the vegetation. If the outside temperature is between 59°F (15°C) and 77°F (25°C) the modules must be installed three (3) days after being palletized to prevent damage to the vegetation. If the outside temperature is between 41°F (5°C) and 59°F (15°C) the modules must be installed five (5) days after being palletized to prevent damage to vegetation.

B. Palletized vegetated material must be stored in a secure, cool shady environment out of direct sunlight prior to installation. Vegetated panels must be protected from rapid temperature changes of more than 30°F (7°C)/hour. All vegetation is to be installed within three (3) days of being delivered.

C. All other materials (non-living) should be stored in a dry location out of direct sunlight with original packaging and documentation left intact prior to installation.
D. All interior plants must be stored in a temperature equal to that of the installation area or as specified by manufacturer.

E. Ideally as the panels are delivered they are hung on the wall or assembled in a manner allowing for staging.

3.03 SITE PROTECTION

A. The work area is to be protected from damage by first sweeping off all debris and then laying protective covering in work and traffic areas.

B. All areas below the installation area must be sectioned off with caution tape, protective cones or other means to prevent persons from walking under the installation work area.

3.04 INSTALLATION

A. Install spacers and green wall brackets to support the green wall panels as per manufacturer’s details.

B. Panels must interlock from the upper and lower sections of the panel with minimum spacing of 1/4” (.635 cm) (6.35 mm) and maximum of 1/2” (1.27 cm) (12.7 mm).

3.05 MAINTENANCE

A. Maintenance must be provided by manufacturer’s approved agent.

B. Provide a one-year maintenance contract beginning from the completion of system installation included in the Contract Amount.
