	0-60%	61-80%	81-90%	91-100%	
CONTEST CRITERIA					
A. FUNCTIONALITY					
1	Do the systems function as intended?	X			
2	Does the HVAC system maintain indoor air quality via contaminant control, fresh air ventilation, or both?	X			
3	Does the HVAC system maintain uniform thermal comfort conditions via temperature control, humidity control, air movement, and a successful distribution system design?		X		
B. EFFICIENCY					
1	Relative to conventional systems, how much energy will the systems save over the course of an entire year?		X		
2	Do the HVAC and lighting controls facilitate a reduction in energy consumption during an entire year of operation?	X			
C. INNOVATION					
1	Were any unique approaches used to solve design challenges?		X		
2	Do the proposed innovations have true market potential?	X			
D. RELIABILITY					
1	How long are the systems expected to operate at a high level of performance?	X			
2	How much maintenance is required to keep them operating at a high level?		X		
E. DOCUMENTATION					
1	Did the drawings, construction specifications, energy analysis results and discussion, and audiovisual engineering presentation enable the jury to conduct a preliminary evaluation of the design prior to its arrival at the competition site?		X		
2	Did the drawings, construction specifications, energy analysis results and discussion, and audiovisual engineering presentation accurately reflect the constructed project as assembled on the competition site?		X		
Total					
					79.0
PUBLIC COMMENTS					
Good building envelope. Excellent design decisions for Vermont location. Good use of mechanical/electrical core with short delievery runs.
